Well the talk by Jo VK2KAA, last Tuesday evening was well received by the meeting. In general business the Open Night to be held on 27th. January 1998 the fourth Tuesday of 1998, this is a coming event not to be missed, but more on this as it gets nearer. The club will hold it's Christmas party on the 5th. of December 1997, a Friday night, in the Mount Colah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) at 7:00 pm (Adults $10-00 Children $5-00.)

Contact Dot VK2DDB by phone on 9477 3243 once more 9477 3243, for catering purposes, as soon as possible if you intend attending.

The Club Net will carry on over the Christmas break, taking place every Monday night, under the Club call sign VK2MA, through the Club repeaters VK2RNS. and VK2RAT. The frequencies are, 147.250 with a positive offset and 439.975 with a negative offset. Listeners tune your receivers to 147.250, or 439.975. Your welcome to join the net, or come along to one of our meetings, you will be most welcome.

If you would like to know more about the Club, or its activities write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490 again 9807 2490.

Do not forget Tuesday the 27-1-1998 for the Hornsby and District Amateur Radio Club's Open Night.

-- John W. Turner VK2WRT Publicity Officer.

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

The Xmas Party for the Liverpool & District Amateur Radio Club will be held at the Scout Camp on Cambridge Road Glenfield on Wednesday week the 10th of December from 8.00 P.M.

The format will be a Barbeque using the Scouts large indoor BBQ, so we wont have to worry about fire restrictions.

Everything is BRING YOUR OWN, but if you like you can share with others on your table.

Bring the XYL and the harmonics, old members are very welcome as are prospective members.

Directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road {the road through Holsworthy Army Camp}. A "LADARC" sign will be placed near the road side in front of the entrance gate to the Scout Camp. The Liverpool and District Amateur Radio Club wish all amateurs and their families all the best for the festive season.

--Submitted by Garry VK2TSR for the Liverpool and District Amateur Radio Club

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

AT THE NOVEMBER MEETING OF THE GROUP IT WAS DECIDED TO INCREASE THE FREQUENCY OF GROUP MEETINGS TO ONE PER MONTH, STARTING IN 1998. THE NEXT MEETING OF THE VHF DX GROUP WILL THEREFORE BE HELD ON THE THIRD TUESDAY OF JANUARY NEXT. THIS MEETING WILL BE A LECTURE BY GUY VK2BBF ON BOOM WIDTH/ELEMENT LENGTH CORRECTION FACTORS IN THE DESIGN AND CONSTRUCTION OF YAGI ANTENNAS.

OPERATING NEWS:

THE SPORADIC E SEASON IS NOW IN FULL SWING WITH MANY OPENINGS REPORTED ON SIX METRES FROM THE SYDNEY AREA TO INTERSTATE AND NEW ZEALAND. THERE HAVE ALSO BEEN OCCASIONAL E-TEP [? fax was unreadable] LINKUPS INTO JAPAN. ON THE HIGHER BANDS, IMPROVED TROPO CONDITIONS HAVE RESULTED IN GOOD SIGNALS ON 144 MHz FROM VK3BWT FROM MALLACOOTA INTO SYDNEY ON MOST NIGHTS IN RECENT WEEKS, AS WELL AS BETTER SIGNALS ON THE USUAL TWO METRE AND SEVENTY CENTIMETRE CIRCUITS INTO VK4 AND VK3. ONE SYDNEY STATION MANAGED TO WORK VK3CY IN WESTERN VICTORIA WITH TWO WATTS AND A FOUR ELEMENT BEAM, COMPARED WITH THE 10 WATTS NORMALLY NEEDED TO WORK INTO NORTHERN VICTORIA. TWO METRES WAS ALSO OPEN TO ZL FROM SYDNEY FOR SEVERAL HOURS LAST WEEK.

EARLIER IN THE MONTH, A TOTAL OF TEN STATIONS WERE WORKED VIA THE MOON ON TWO METRES FROM THE SYDNEY AREA DURING THE ARRL EME CONTEST IN MID NOVEMBER. A VK6 STATION WITH JUST A SINGLE TEN ELEMENT YAGI REPORTED HEARING K5GW VIA THE MOON DURING THE CONTEST.

YOU CAN FIND OUT MORE ABOUT VHF DX GROUP ACTIVITIES BY JOINING THE 11.00 AM SUNDAY NET ON TWO METRES FM ON THE BLUE MOUNTAINS REPEATER. THIS NET ALLOWS FM-ONLY OPERATORS THE OPPORTUNITY TO CONTACT PEOPLE NOT NORMALLY ACTIVE ON FM AND TO FIND OUT ABOUT ACTIVITIES ELSEWHERE ON THE BAND.

--SUBMITTED ON BEHALF OF RICHARD SOULIE VK2ARS (using a dirty old fax machine)

THE ILLAWARRA AMATEUR RADIO SOCIETY,INVITES ALL MEMBERS , AND THEIR PARTNERS TO THE FINAL MEETING FOR 1997.
THE MEETING , AS USUAL , WILL COMMENCE AT 7:30PM TUESDAY DECEMBER 9TH . THE MEETING WILL BE HELD IN THE MEETING ROOM , S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG .
I HAVE BEEN ADVISED BY OUR GOURMET CATERER , VIC , THAT IT WILL BE A SUPPER TO REMEMBER . SO COME ALONG AND ENJOY

GOOD COMPANY AND GOOD HOSPITALITY .

THE BATEMANS BAY PROJECT IS GETTING CLOSER TO BEING ON AIR
BUT MORE ABOUT THAT LATER .

IF YOU WOULD LIKE MORE INFORMATION RE THE I.A.R.S OR IN
BECOMMING A MEMBER OF THE CLUB . GIVE THE PUBLICITY
OFFICER A CALL ON 02 4267 2296 AFTER 4:30PM MOST DAYS OR
CALL VK2UBF ON THE BEST REPEATER IN AUSTRALIA 146850
VK2RMP .

HOPING TO SEE MANY MEMBERS AND THEIR PARTNERS AT THE
MEETING .

CHEERS FROM BRIAN FARRAR VK2UBF PUBLICITY OFFICER I.A.R.S .

TAMWORTH RADIO CLUB

Tamworth Radio Club Inc. will be holding its christmas party at chaffey
dam on Saturday December 6th 1997 starting at 10am for skiers and our
December General meeting starting at 1500hrs sharp

--Paul Perry, Publicity Officer

COMING EVENTS (30 Dec 97)

FAI Rally of Canberra (WICEN).....Ends today
Divisional Trash & Treasure Sale at Dural.....this afternoon

DECEMBER

Radio Amateurs Old Timers Club net.....Monday
Hornsby & District ARC Christmas party.....Friday
Waverly ARS Project Day.....Saturday
Tamworth Radio Club Christmas party & meeting.....Saturday
Divisional Amateur exams at Parramatta.....next Sunday
Hunter WICEN Christmas BBQ.....next Sunday
Gladesville ARC monthly meeting.....8th
WIA Exam Service closes for the holidays.....8th
Illawarra ARS meeting.....9th
WIA VK2 Division Christmas Party & AAPRA Xmas party.....13th
Fishers Ghost ARC BBQ & auction.....13th
WIA Federal Office closes for the holidays.....19th

Last VK2WI broadcast for 1997 (BBQ at Dural after the morning
broadcast).....21st

1998
JANUARY

"Global Hilton" round the world balloon flight station active.....TBA
First VK2WI broadcast for 1998 (morning only - no evening b/c).....4th
Liverpool & District ARC Christmas party.....10th
Japan International DX contest (LF CW).....10th-12th
VK2WI morning and evening broadcasts resume.....11th

WIA Federal Office and WIA Exam Service re-open.....19th
Fishers Ghost ARC meeting.....20th

BROADCAST ROSTER
Next Sunday, 7th December, 1997

Morning:
Announcer: Richard VK2SKY
Engineer: Eric VK2EFY

Evening:
Announcer: Colin VK2HCT
Engineer: Peter VK2CZX

If you would like to submit a news item for inclusion in the VK2 Divisional

broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the
broadcast; if sending by packet or Internet, please allow for forwarding
delays in the network.

DOES ANYBODY READ THIS PART????

If sending printed copy, please double space your text, leave wide
margins, and use a plain font such as Arial or Helvetica for clarity.
Please proofread your text, check your grammar and punctuation, avoid
using shorthand and abbreviations, and use the exact words you wish
the announcer to say on air. Remember, the more care you take in
preparing your news item, the better the announcer will read it.

Yes I have it and has a squelch and it's adjustable. I will look it up
or you can search on tucows.com.

3819. SOLAR OBSERVATION & AURORAL ACTIVITY NETWORKS

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-28 00:00:00 UTC
From: COler@Solar.Stanford.Edu
Message-ID: <65m7ms$4dc1@mars.online.uleth.ca>
Source record: 185743
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.shortwave,rec.radio.amateur.misc

Obtain the latest observation reports of solar activity at:
http://solar.uleth.ca/solar/www/sunobs.html

Data from professional SOON sites are displayed, as well as observations from amateur solar observers.

AMATEUR SOLAR OBSERVERS: You are encouraged to send your solar activity observation reports to: http://solar.uleth.ca/solar/www/subsunobs.html to help professionals correlate solar phenomena with sensor measurements. For example, the observation of an x-ray flare that cannot be optically correlated due to clouds at observation sites poses a serious problem to solar forecasters. These web pages provide amateurs with a direct link to solar forecasters and can therefore help prevent solar flares (and other types of phenomena) from being optically uncorrelated.

AURORAL ACTIVITY OBSERVERS: We have established a web page that shows all current auroral activity sightings and all amateur observer sightings around the world. You are encouraged to send all observation reports to our Auroral Activity Sighting Network at:

http://solar.uleth.ca/solar/www/auroras.html

The solar activity and auroral activity web pages listed above are updated every five minutes. They are therefore kept up-to-date.

If you experience any problems with these web pages, please forward them to: COler@Solar.Stanford.Edu.

3820. Need repeater schematic.....

What the hell is up with these morons?? They cuss; play music over one another; scream and yell about Jews and Blacks; burp and basically say nothing of value!
I can see these guys sitting in their shack down in South Carolina in front of their mikes; big fat stomach hanging over the belt....sucking down beers....chewing on beef jerky...and running off at the mouth about affirmative action. Great hobby!!

It makes alot of sense, to make them take a CW Test, and secondly they dont
have to take CW Test to get a License, its called the No-Code Tech

3826. What is a subcarrier?

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-28 00:00:00 UTC
From: chrisl@netdoor.com
Message-ID: <65ml15$it1$1@usenet47.supernews.com>
Source record: 185750

Here in Mississippi we have a subcarrier on our public radio for the blind. It transmits assorted books and mags to be read to them. I have hunted for a definition of a subcarrier in my ham stuff and can't find it. What is it and how does it work?
Tnx,
Chris

GLOSSARY OF SOLAR-TERRESTRIAL TERMS

A
=

a index. See ak index.

aa index. A daily and half daily index of geomagnetic =

activity determined from the k indexes scaled at two =

nearly antipodal stations at invariant magnetic latitude
50 degrees(Hartland, England, and Canberra, Australia). The =

aa values are in units of 1 nT. The index is available back to 1868, =

and is provided by the Institut de Physique du Globe de Paris, France.

absorption line. In spectroscopy, and in particular =

the solar Fraunhofer spectrum, a characteristic wavelength =

of emitted radiation that is partially absorbed by the medium between =

the source and the observer. (See H alpha.)

active. A descriptive word specifically meaning (1) =
a probability of > or =3D 50% for an M-class x-ray flare =
(see x-ray flare class) in a sunspot region; (2) =
disturbed geomagnetic levels such that 16 < or =3D Ak index < 30.
active dark filament (ADF). A filament displaying motion or =
changes in shape, location, or absorption characteristics. =
active longitude. The approximate center of a range =
of heliographic longitudes in either the northern or southern solar =
hemisphere (seldom both at the same time) containing one or more large =
and complex active regions formed by the frequent, =
localized emergence of new magnetic flux. Individual sunspot groups =
within the complex can have relatively short lifetimes (a week or =
two); the complex may persist for several solar rotations because =
additional spot groups form as earlier ones decay.
active prominence. A prominence moving =
and changing in appearance over a few minutes of time.
active prominence region. A portion of the solar =
limb displaying active prominences; typically associated =
with an active region. =
active region (AR). A localized, transient volume of =
the solar atmosphere in which plages, sunspots, facula, =
flares, etc., may be observed. Active regions are the result =
of enhanced magnetic fields; they are at least bipolar and may =
be complex if the region contains two or more bipolar groups. =
active surge region (ASR). An active region that exhibits a group
or series of spike-like surges that rise no higher than 0.15 solar =
radii above the limb. (See bright surge on the limb.) =
ADF. See active dark filament.
AE index. A geomagnetic index of the auroral electroj, which =
characterizes the maximum range of excursion (both positive =
and negative) from quiet levels; measured at a given =

universal time by using the combined data from a worldwide ring of =

high-latitude magnetic observatories. AU (A upper) refers to =

the greatest positive deviation from the quiet time reference and =

AL (A lower) to the most negative. By definition AE =3D AU - AL. AO =

refers to the mean of AU and AL: AO =3D 1/2 (AU + AL). The AE and compan=
ion =

indexes are provided by the Data Analysis Center for Geomagnetism =

and Spacemagnetism of Kyoto University, Kyoto, Japan.

AFR. The Ak index observed at Fredericksburg, Virginia. =

AFS. See arch filament system. =

ak index. A 3-hourly "equivalent amplitude" =

index of geomagnetic activity for a specific station =

or network of stations (represented generically here by k) expressing =

the range of disturbance in the horizontal magnetic field. "ak" =

is scaled from the 3-hourly K index according =

to the following table:

K	0	1	2	3	4	5	6	7	8	9
ak	0	3	7	15	27	48	80	140	240	400

At SESC these values are used directly for operational purposes. But =

to convert the ak values to nanoteslas (nT), a local (station-dependent)=
=

conversion factor must be found by dividing the station's lower limit =

for K=3D9 by 250. For example, at Boulder and Fredericksburg the lower =

limit for K=3D9 is 500 nT so the factor is 2; therefore the ak values =

for these stations are in units of 2 nT. (To obtain an equivalent =

amplitude in nanoteslas for Boulder or Fredericksburg, the index value =

must be doubled).

Ak index. A daily index of geomagnetic activity for a specific =

station or network of stations (represented generically here by k) =

derived as the average of the eight 3-hourly ak indexes =

in a Universal Time day. =

Alfven wave. A transverse wave in magnetized plasma
characterized by a change of direction of the magnetic field =

(rather than a change of intensity). =

am index. A mean, 3-hourly "equivalent amplitude" of geomagnetic =

activity based on standardized K index data from a global network =

of 23 Northern and Southern Hemisphere stations by the Institut de =

Physique du Globe de Paris, France; am values are given in units of 1 nT=
=2E =

Am index. The daily Ak index determined from the eight daily =

am indexes. =

An index. The daily Ak index determined from only the Northern =

Hemisphere stations of the am index network.

anomaly. In typical SESC use, an unexpected response =

of a spacecraft.

ap index. A mean, 3-hourly "equivalent amplitude" =

of magnetic activity based on K index data from a planetary =

network of 11 Northern and 2 Southern Hemisphere magnetic observatories =

between the geomagnetic latitudes of 46 degrees and 63 degrees
by the Institut fur Geophysik at Gottingen, F.R. Germany; ap values =

=

Ap index. Formally the daily Ak index, determined from the eight daily =

ap indexes. However, for daily operational uses (since several weeks are=
=

required to collect the data and calculate the index), Air Force Space =

Forecast Center estimates the value of the Ap index by measuring the =

geomagnetic field in near-real time at several Western Hemisphere =

magnetometer stations and statistically weighting the data to represent =

the Gottingen Ap. The value of this estimated Ap index is reported in =

SESC daily and weekly summaries of geophysical activity.

=

aphelion. That point on the path of a sun-orbiting =

object most distant from the center of the sun. Compare perihelion.

=

apogee. That point on the path of an earth-orbiting satellite most =

distant from the center of the earth. Compare perigee.

APR. See active prominence region. =

AR. See active region.

arcade. A series of magnetic loops, overlying a solar inversion line.

arch filament system (AFS). A system of small, arched linear-absorption =

features connecting bright, compact plage of opposite polarity. =

An AFS is a sign of emerging bipolar magnetic flux and possibly rapid =

or continued growth in an active region. =

As index. The daily Ak index determined from only the Southern =

Hemisphere stations of the am index network.

ASR. See active surge region.

atmospherics. Also known as "sferics," transient =

radio waves produced by naturally occurring electric discharges =

(e.g., lightning) in the earth's atmosphere.

AU. The mean distance between the earth and sun, equal to
214.94 solar radii or 1.496E+11m.

aurora. A sporadic, faint visual phenomenon associated with =

geomagnetic activity that occurs mainly in the high-latitude =

night sky. Auroras occur within a band of latitudes known as =

the auroral oval, the location of which is dependent on =

geomagnetic activity. Auroras are a result of collisions between =

atmospheric gases and precipitating charged particles (mostly
electrons) guided by the geomagnetic field from the magnetotail. =

Each gas (oxygen and nitrogen molecules and atoms) gives out its =

own particular color when bombarded, and atmospheric composition =

varies with altitude. Since the faster precipitating particles =

penetrate deeper, certain auroral colors originate preferentially
from certain heights in the sky. The auroral altitude range is 80 =

to 1000 km, but typical auroras are 100 to 250 km above the ground; =

the color of the typical aurora is yellow-green, from a specific =

transition of atomic oxygen. Auroral light from lower levels in the =
atmosphere is dominated by blue and red bands from molecular nitrogen =
and molecular oxygen. Above 250 km, auroral light is characterized =
by a red spectral line of atomic oxygen. To an observer on the ground, =
the combined light of these three fluctuating, primary colors produces =
an extraordinary visual display. Auroras in the Northern Hemisphere =
are called the aurora borealis or "northern lights." Auroras in =
the Southern Hemisphere are called aurora australis. The patterns =
and forms of the aurora include quiescent arcs, rapidly moving rays =
and curtains, patches, and veils.

auroral electrojet. See electrojet. =

auroral oval. An elliptical band around each geomagnetic =
pole ranging from about 75 degrees magnetic latitude at local =
noon to about 67 degrees magnetic latitude at midnight under =
average conditions. It is the locus of those locations of the maximum =
occurrence of auroras and widens to both higher and =
lower latitudes during the expansion phase of a magnetic substorm.
=

autumnal equinox. The equinox that occurs in September. Compare =
vernal equinox. =

B

B-angle. As viewed from the earth, the heliographic latitude of the =
center of the solar disk. The center of the solar disk usually does =
not coincide with the heliographic equator, due to a tilt of the =
solar axis with respect to the ecliptic. (See Bo under solar coordinates=
).
=

Bartels' rotation number. The serial number assigned =
to 27-day rotation periods of solar and geophysical parameters. =
Rotation 1 in this sequence was assigned arbitrarily by Bartels to =
begin in January 1833, and the count has continued by 27-day =

intervals to the present. (For example, rotation 2000 began on 12 =
November 1979, rotation 2030 on 30 January 1982.) The 27-day =
period was selected empirically from the observed recurrence of geo-
magnetic activity attributed to co-rotating features on the sun. =
The sun has an average rotation period (as seen from the earth) of =
27.27 days; therefore, solar longitude slowly drifts with respect =
to the Bartels rate. Compare Carrington longitude.

bipolar magnetic region (bmr). A region of the solar =
photosphere containing at least two areas of enhanced magnetic =
fields of opposing polarity.

birefringent filter. An optical device that passes =
a narrow range of wavelengths near a selected optical wavelength. =
Used especially in solar telescopes to pass selected lines (usually =
H alpha) in the Fraunhofer spectrum.

bow shock. A collisionless shock wave in front of the =
magnetosphere arising from the interaction of the supersonic =
solar wind with the earth's magnetic field. =

bright point. A short-lived brightening of flare intensity, less than =
ten millionths of the solar hemisphere in area. =

bright surge on the disk (BSD). A bright (high temperature) =
stream of gas (surge) seen against the solar disk. BSDs are often =
flare related and commonly fan out from the flare site. See also =
bright surge on the limb, and dark surge on the disk.

bright surge on the limb (BSL). A bright stream of =
gas (surge) emanating from the chromosphere that moves =
outward more than 0.15 solar radius above the limb. It may =
decelerate and return to the sun. Most BSLs assume a linear =
radial shape but can be inclined and/or fan shaped because they =
apparently follow magnetic lines of force. =

brightness temperature. The equivalent blackbody temperature =
at a specified wavelength of a uniform source filling the resolution =

element of the telescope.

BSD. See bright surge on the disk.

BSL. See bright surge on the limb.

burst. A transient enhancement of the solar radio =

emission, usually associated with an active region or flare. =

butterfly diagram. A plot of observed solar active =

region latitudes vs. time. This diagram, which resembles a butterfly, =

shows that the average latitude of active region formation drifts =

from high to low latitudes during a sunspot cycle. =

C

C index. A subjective daily character figure (index) =

of geomagnetic activity for a single observatory; for =

each UTC day the figure is 0 for very quiet magnetic =

conditions, 1 for moderately disturbed conditions, and 2 =

for severely disturbed conditions. =

Carrington longitude. A system of fixed solar longitudes =

rotating at a uniform synodic period of 27.2753 days =

(a sidereal period of 25.38 days). Carrington selected the meridian =

that passed through the ascending node of the sun's equator at 1200 =

UTC on 1 January 1854 as the original prime meridian. The daily =

Carrington longitude of the central point of the apparent solar disk
is listed (with other solar coordinates in The Astronomical Almanac
published annually by the U.S. Naval Observatory. Compare Bartels' =

rotation number.

Castelli U. See U burst.

celestial equator. The projection of earth's geographic =

equator onto the celestial sphere.

celestial sphere. An imaginary spherical shell around =

the earth and concentric with it. =

centimeter burst. A solar radio burst in the centimeter =

wavelength range (1 to 10 cm or 0.01 to 0.1 m), or 30 000 to 3000 =

MHz in the frequency range.

central meridian passage (CMP). The rotation of an active region =

or other feature across the longitude meridian that =

passes through the apparent center of the solar disk.

CFI. See comprehensive flare index. =

chromosphere. The layer of the solar atmosphere above =

the photosphere and beneath the transition =

region and the corona. The chromosphere is the =

source of the strongest lines in the solar spectrum, including the =

Balmer alpha line of hydrogen and the H and K lines of calcium, and =

is the source of the red (chromium) color often seen around the rim =

of the moon at total solar eclipses. =

Ci index. The daily international magnetic character =

figure formed by taking the arithmetic mean of the C =

index values from all reporting observatories.

cleft. See cusp.

CMD. Central Meridian Distance. (See solar =

coordinates). =

CME. See coronal mass ejection.

CMP. See central meridian passage. =

comprehensive flare index (CFI). A method of evaluating =

the significance of a complex flare event. The CFI =

=3D A + B + C + D + E. The value of each component is given below; a =

value of zero is assigned if the effect did not occur. The CFI values =

range from 1 to 17 (non-occurrence gives a zero value); values =

>10 indicate flares with unusually strong electromagnetic radiation.

A-Originally the importance of ionizing radiation as indicated =

by the importance of associated SID, scale 1-3; but currently scaled =

from the x-ray flare class, class C being 1, =

class M being 2, and class X being 3.

B-Importance of H alpha flare; =

scale 1-3 (3 includes flare importance classes 3 and 4). =

C-Log of 10.7-cm peak radio flux in units of 10E-22 W/sq m/Hz.

D-Effects associated with the dynamic radio spectrum: Type II =

burst =3D 1, continuum storm =3D 2, Type IV burst =3D 3. =

E-Log of 200-MHz flux in same units as C.

The CFI was devised and documented by Helen Dodson Prince and Ruth =

Hedeman at the McMath-Hulbert Observatory.

conjugate points. Two points on the earth's surface =

at opposite ends of a geomagnetic field line. =

continuum. Optical radiation arising from broadband =

emission from the photosphere. =

continuum storm (CTM). General term for solar noise =

lasting for hours and sometimes days, in which the intensity varies =

smoothly with frequency over a wide range in the meter and decimeter =

wavelengths. =

convection. The bulk transport of plasma (or gas) from one place to anoth=
er, =

in response to mechanical forces (for example, viscous interaction with =
the =

solar wind) or electromagnetic forces. =

Coordinated Universal Time (UTC). By international =

agreement, the local time at the prime meridian, which passes through =

Greenwich, England. It was formerly known as Greenwich Mean Time, =

or sometimes simply Universal Time. There are 24 time zones around =

the world, labeled alphabetically. The time zone centered at Greenwich =

has the double designation of A and Z. Especially in the military =

community, Coordinated Universal Time is often referenced as Z or =

Zulu Time. =

corona. The outermost layer of the solar atmosphere, =

characterized by low densities (<10E+9 per cubic cm or 10E+15 per cubic =
m
and high temperatures (>10E+6 K).

coronagraph. An optical device that makes it possible =

to observe the corona at times other than during an eclipse. =

A simple lens focuses the sun onto an occulting disk that =

prevents the light from the solar disk from proceeding =

farther along the optical path, effectively providing an artificial =

eclipse.

coronal hole. An extended region of the corona, =

exceptionally low in density and associated with unipolar photospheric =

regions having "open" magnetic field topology. Coronal holes are =

largest and most stable at or near the solar poles, and are a source =

of high-speed solar wind. Coronal holes are visible =

in several wavelengths, most notably solar x-ray s, =

but at SESC, coronal holes are determined from solar images in He =

1083 nm provided by the Kitt Peak National Solar Observatory.

coronal loops. A typical structure of enhanced corona
observed in EUV lines and soft x-rays. They are sometimes related to =

H alpha loops. Coronal loops represent "closed" magnetic topology. =

coronal mass ejection (CME). A transient outflow of =

plasma from or through the solar corona. CMEs are often =

but not always associated with erupting prominences, =

disappearing solar filaments, and flares. =

coronal rain (CRN). Material condensing in the corona
and appearing to rain down into the chromosphere =

as observed in H alpha at the solar limb =

above strong sunspots. =

coronal streamer. A large-scale structure in =

the white-light corona often overlying a principal =

inversion line in the solar photospheric magnetic fields. =

(See helmet streamer).

coronal transients. A general term for short-time-scale changes in the co=
rona. =

corrected geomagnetic coordinates. A nonspherical coordinate =

system based on a magnetic dipole axis that is offset from the earth's =
center by about 450 km toward a location in the Pacific Ocean =
(15.6 N 150.9 E). This "eccentric dipole" axis intersects the surface at=
=
81N 85 W, and 75 S 120 E.
cosmic noise. The broad spectrum of radio noise arriving =
at the earth from sources outside the solar system. =
cosmic ray. An extremely energetic (relativistic) charged =
particle primarily originating outside the earth's magnetosphere.
=
Cp index. A daily index of geomagnetic activity =
analogous to the Ci index, obtained from the sum of =
the eight daily values of the ap index. The range of =
Cp is 0.0 to 2.5, 2.5 representing the most disturbed. =
critical frequency. In ionospheric radio propagation, =
that frequency capable of penetration just to the layer of maximum =
ionization with vertical propagation. Radiowaves of lower frequencies =
are refracted back to the ground; higher frequencies pass through.
CRN. See coronal rain.
crochet. A sudden deviation in the sunlit geomagnetic =
field H component (see geomagnetic elements) associated =
with extraordinary solar flare x-ray emission. =
The effect can be as much as 50 nT and last up to 30 minutes. The =
event is also known as an SFE (solar flare effect). =
CTM. See continuum storm. =
cusp(s). In the magnetosphere, two regions =
near magnetic local noon and approximately 15 degrees of latitude =
equatorward of the north and the south magnetic poles. The cusps mark =
the division between geomagnetic field lines on the sunward side =
(which are approximately dipolar but somewhat compressed =
by the solar wind) and the field lines in the polar =

cap that are swept back into the magnetotail by the =

solar wind. The term cusp implies conical symmetry around the axis =

of the bundle of converging (Northern Hemisphere) or diverging (Southern=
=

Hemisphere) field lines. In practice, "cusp" and "cleft" are =

often used interchangeably. However, "cleft" implies greater extension =

in longitude (local time) and hence a wedge-shaped structure. =

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

D

=

D component of the geomagnetic field. See geomagnetic =

elements. =

D region. A daytime region of the earth's ionosphere
beginning at approximately 40 km, to 90 km altitude. =

Radiowave absorption in layers in this region can be significantly =

increased in response to increased ionization associated with solar =

activity. =

dark surge on the disk (DSD). Dark gaseous ejections =

on the sun visible in H alpha. They usually originate =

from small subflare-like brightenings. Material is usually seen =

to be ejected, to decelerate at a gravitational rate, and to flow =

back to the point of origin. DSDs can occur intermittently for days =

from an active region. =

dB (decibel). A unit used to express the ratio between two levels
of power. By definition dB =3D 10 log (P2/P1). (Doubling the power
ration is approx an increase of 3 dB). =

DB. disparition brusque. See disappearing =

solar filament.

declination. (1) The angular distance of an astronomical =

body north (+) or south (-) of the celestial equator. =

(2) In geomagnetic applications, the angle between true north and =

the horizontal component of the local geomagnetic field. =

differential charging. The charging of different areas =

of a spacecraft or satellite to different potentials in response to =

sunlight, the charged particle environment, and the design and compositi=
on =

of the structural materials themselves. Discharge may occur through =

arcing and generally is detrimental.

differential particle flux. The differential particle =

directional flux j (E,w) denotes the =

number of particles of energy E per unit energy interval, =

per unit area, per unit time, per unit solid angle of observation, =

passing through an area perpendicular to the viewing direction; the =

angle w is the angle between the viewing direction =

and the local magnetic field. It is approximately obtained from the =

count rate of a physical detector measuring the flux =

of particles between energy E and E +dE, geometric factor =

G, and solid angle of view dW through the relationship

j(E,w) =3D C/(G * dE * dW * dt)

where C is the number of detector counts in time dt.

differential rotation. The change in solar rotation rate with latitude. =

Low latitudes rotate at a faster angular rate (approx. 14 degrees/day) t=
han =

do high latitudes (approx. 12 degrees/day). =

dip. The geomagnetic inclination angle. See =

geomagnetic elements.

dip equator. An irregular, imaginary line around the earth where the =

geomagnetic inclination angle is measured to be zero. =

It lies near the geographic equator. =

disappearing solar filament (DSF). A solar filament =

(prominence) that disappears suddenly (on a time scale of minutes =

to hours). The prominence material is often seen to ascend but is =

also seen to fall into the sun or just fade. (Historically, DSFs have =

been called disparitions brusques because they were first studied =
by French astronomers.) DSFs are a possible indicator of coronal =
mass ejections.

disk. The visible surface of the sun (or any heavenly =
body) projected against the sky.

disparition brusque (DB). See disappearing solar filament. =

Doppler shift. A change in the perceived frequency =
of a radiated signal caused by motion of the source relative to the =
observer.

dose rate. The rate at which radiation energy is absorbed =
in living tissue, expressed in centisieverts per unit time. =

DSD. See dark surge on the disk.

DSF. See disappearing solar filament.

Dst index. A measure of variation in the geomagnetic =
field due to the equatorial ring current. It is =
computed from the H-components at approximately four near-equatorial =
stations at hourly intervals. At a given time, the Dst index is =
the average of variation over all longitudes; the reference level =
is set so that Dst is statistically zero on internationally designated =
quiet days. An index of -50 or deeper indicates a storm-level =
disturbance, and an index of -200 or deeper is associated with middle-
latitude auroras. Dst is determined by the World Data =
Center C2 for Geomagnetism, Kyoto University, Kyoto, Japan. =

E
=

E region. A daytime region of the earth's ionosphere
roughly between the altitudes of 90 and 160 km. E region characteristics=
=
(electron density, height, etc.) depend on the solar zenith angle =
and solar activity. The ionization in the E layer is caused mainly =
by x-ray s in the range 0.8 to 10.4 nm. (See also sporadic E).

eccentric dipole. See corrected geomagnetic coordinates.

eclipse. The obscuring of one celestial body by another. =

(1) A Solar Eclipse occurs when the moon comes between the earth and =

the sun. In a total eclipse, the solar disk is completely obscured; in a=
=

partial eclipse the solar disk is only partly obscured. An annular eclip=
se =

occurs when the moon is near its apogee and the apparent diameter of the=
=

moon is less than that of the sun so that the sun is never completely =

obscured. "First and last contacts" are defined as the times of =

tangency of the solar and lunar disks. A central eclipse =

(which can be total or annular) has two additional times of tangency: =

"second contact," when maximum eclipse begins, and "third =

contact," when it ends. The last glimpses of the sun through the lunar =

valleys, just before second contact, are known as Baily's =

beads. (2) A lunar eclipse occurs when the moon =

enters the shadow cast by the earth. (3) Spacecraft in the earth's =

shadow are said to be in eclipse. =

ecliptic. The great circle made by the intersection =

of the plane of the earth's orbit with the celestial sphere. =

(Less properly, the apparent path of the sun around the sky during =

the year.) =

EFR. See emerging flux region.

EHF. See extremely high frequency.

electrojet. (1) Auroral: A current that flows in the =

ionosphere in the auroral zone. (2) Equatorial: A thin electric =

current layer in the ionosphere over the dip equator =

at about 100 to 115 km altitude.

electrostatic discharge (ESD). An abrupt equalization =

of electric potentials. In space, ESD can occur between objects or =

portions of a single object (see differential charging); =

ESD may occur locally within a dielectric or cable. The consequences =

may include material damage, a spacecraft anomaly, phantom =

command s, disrupted telemetry, and contaminated data. =

ELF. See extremely low frequency. =

emerging flux region (EFR). An area on the =

sun where new magnetic flux is erupting. An EFR is a bipolar =

magnetic region that first produces a small bipolar plage =

visible in the chromosphere, which may develop an arch =

filament system and the initial spots of a sunspot group. =

An EFR may be isolated from other solar activity or may occur =

within an active region. =

emission line. In spectroscopy, a particular wavelength =

of emitted radiation, more intense than the background continuum.

emission measure. The integral of the square of the =

electron density over volume; the units are inverse volume (per cubic m)=
=2E

ephemeris. An astronomical almanac listing solar =

coordinates and the positions of the sun and other heavenly bodies =

at regular intervals in time. =

EPL. See eruptive prominence on limb.

equatorial electrojet. See electrojet. =

equinox. One of the two points of intersection of the =

celestial equator and the ecliptic. The sun passes =

through the vernal equinox on about 21 March and through =

the autumnal equinox on about 22 September. =

eruptive. With regard to solar flare =

predictions, a probability of >50% that an active region will produce =

C class x-ray flares. (See x-ray flare class.)

eruptive prominence on limb (EPL). A solar prominence
that becomes activated and is seen to ascend from the sun; sometimes =

associated with a coronal mass ejection. (See also disappearing =

solar filament).

ESD. See electrostatic discharge.

estimated hemispherical power input. For the earth, =

an estimate made from NOAA/TIROS particle measurements of the =

instantaneous power dissipated daily in a single auroral zone by =

auroral particle precipitation. The power ranges from approximately =

5 gigawatts during quiet intervals up to more than 100 in very active =

times. The magnitude of this power input corresponds closely to the =

level of geomagnetic activity.

EUV. See extreme ultraviolet.

Evershed effect. Horizontal motion of the solar atmosphere =

near a sunspot, having velocities of a few kilometers =

per second. In the photosphere, matter streams away =

from the umbra. In the chromosphere, the direction of =

flow is toward the umbra. =

exosphere. The earth's atmosphere above 500-600 km. =

expert system. A computer program intended to simulate =

human logic for analyzing a complex situation on the basis of a sequence=
=

of behavior rules supplied by a human expert. (See Theophrastus).

extraordinary mode. One of the two modes of propagation =

of electromagnetic waves in a magnetic plasma. For =

propagation along the direction of the magnetic field, it is the mode =

in which the electric vector rotates in the same sense that an electron =

gyrates freely about the field. For propagation perpendicular to =

the magnetic field, the electric vector oscillates perpendicular to =

the primary magnetic field. (See also ordinary mode.)

extreme ultraviolet (EUV). A portion of the electromagnetic =

spectrum from approximately 10 to 100 nm.

extremely high frequency (EHF). That portion of the =

radio frequency spectrum from 30-300 GHz. =

extremely low frequency (ELF). That portion of the =

radio frequency spectrum from 30 to 3000 Hz. =

F

F corona. Of the white-light corona (the =

corona seen by the eye at a total solar eclipse), that =

portion which is caused by sunlight scattered or reflected by solid =

particles (dust) in interplanetary space. The same phenomenon produces =

zodiacal light. =

F region. The upper region of the ionosphere, =

above approximately 160 km altitude. F region electron densities are =

highly variable, depending on the local time, solar activity, season, =

and geomagnetic activity. The F region contains the =

F1 and F2 layers. The F2 layer is more dense and peaks at altitudes =

between 200 and 600 km. The F1 layer, which forms at lower altitudes =

in the daytime, has a smaller peak in electron density.

f-spot. See follower spot. =

facula. White-light plage-a =

bright region of the photosphere seen in white light, =

seldom visible except near the solar limb. Corresponds =

with concentrated magnetic fields that may presage sunspot =

formation.

fibril. A linear feature in the H alpha =

chromosphere of the sun, occurring near strong sunspots =

and plage or in filament channels. Fibrils =

parallel strong magnetic fields, as if mapping the field direction.

filament. A mass of gas suspended over the chromosphere =

by magnetic fields and seen as dark ribbons threaded over the =

solar disk. A filament on the limb of the sun seen in emission =

against the dark sky is called a prominence. Filaments occur =

directly over magnetic-polarity inversion lines, unless they are active.=
=

filament channel. A broad pattern of fibrils in the chromosphere, =

marking a portion of a magnetic polarity inversion line where a filament=
=

may soon form or where a filament recently disappeared. Filament channel=
s =

interconnect separate filaments and active regions =

on a common inversion line. =

flare. A sudden eruption of energy in the solar atmosphere =

lasting minutes to hours, from which radiation and particles are emitted=
=2E =

Flares are classified on the basis of area at the time of maximum =

brightness in H alpha.

Importance 0 (Subflare): < =3D 2.0 hemispheric square degrees
Importance 1: 2.1-5.1 square degrees =

Importance 2: 5.2-12.4 square degrees =

Importance 3: 12.5-24.7 square degrees =

Importance 4: > =3D 24.8 square degrees
[One square degree is equal to (1.214 x 10E+4 km)squared =3D 48.5 =

millionths of the visible solar hemisphere.] A brightness =

qualifier F, N, or B is generally appended to the importance character =

to indicate faint, normal, or brilliant (for example, 2B). =

fluence. Time integrated flux. In SESC =

use, a specified particle flux accumulated over 24 hours.

flux. The rate of flow of a physical quantity through =

a reference surface.

fmin. The lowest frequency at which echo traces are =

observed on an ionogram. It increases with increasing =

D region absorption.

foEs. The maximum ordinary mode radiowave =

frequency capable of vertical reflection from the sporadic =

E layer of the ionosphere.
=

foF2. The maximum ordinary mode radiowave =

frequency capable of vertical reflection from the F2 layer of the =

ionosphere. (See F region.) =

follower spot. In a magnetically bipolar or multipolar =

sunspot group, the main spot in that portion of the group east =

of the principal inversion line is called the follower =

or f-spot. Leader and follower describe the positions of spots =

with respect to apparent motion due to solar rotation. (Compare leader =

spot.) =

Forbush decrease. An abrupt decrease, of at least 10%, =

of the background galactic cosmic ray intensity as =

observed by neutron monitors. It is associated with major plasma =

and magnetic field enhancements in the solar wind =

at or beyond the earth.

Fraunhofer spectrum. The system of dark lines superposed =

on the continuous solar spectrum formed by the absorption of photons =

by atoms and molecules in the solar and terrestrial atmospheres.

=2E

GLOSSARY OF SOLAR-TERRESTRIAL TERMS

G

gamma rays. High-energy radiation (energies in =

excess of 100 keV) observed during large, extremely energetic solar =

flares.

GEOALERT. An IUWDS special message summarizing by code =

the current and predicted levels of solar activity =

and geomagnetic activity. =

geocorona. The outer region of the earth's atmosphere =

lying above the thermosphere and composed mostly of hydrogen.

geomagnetic activity. Natural variations in the geomagnetic =

field classified quantitatively into quiet, =

unsettled, active, and geomagnetic storm levels =

according to the observed a index:

Category Range of index

quiet 0 - 7 =

unsettled 8 - 15 =

active 16 - 29 =

minor storm 30 - 49 =

major storm 50 - 99 =

severe storm 100 - 400 =

geomagnetic elements. The components of the geomagnetic =

field at the surface of the earth. These elements are usually =

denoted thus in the literature:

X-the geographic northward component =

Y-the geographic eastward component =

Z-the vertical component, reckoned positive downward =

H-the horizontal intensity, of magnitude sq rt((X)squared + (Y)squared)=

F-the total intensity sq rt((H)squared + (Z)squared)
I-the inclination (or dip) angle, arctan (Z/H)
D-the declination angle, measured from the geographic north
direction to the H component direction, positive in an eastward =

direction.
D =3D arctan (Y/X)

However, in SESC use, the geomagnetic northward and geomagnetic =

eastward components are called the H and D components. The H axis =

direction is defined by the mean direction of the horizontal component =

of the field; the D component is expressed in nanoteslas and is related=
=

to the direction of the horizontal component relative to geomagnetic =

north by using the small-angle approximation. Thus the D component =

=3D H (the horizontal intensity) multiplied by delta D (the =

declination angle relative to geomagnetic north, expressed in radians).=
=

geomagnetic field. The magnetic field in and around =

the earth. The intensity of the magnetic field at the earth's surface =

is approximately 32,.000 nT at the equator and 62,000 nT =

at the north pole (the place where a compass needle points vertically =

downward). The geomagnetic field is dynamic and undergoes continual =

slow secular changes as well as short-term disturbances (see geomagneti=
c =

activity). The geomagnetic field can be approximated =

by a centered dipole field, with the axis of the dipole inclined to =

the earth's rotational axis by about 11.5 degrees. Geomagnetic =

dipole north is near geographic coordinate 78.3 N 69 W (Thule, Greenlan=
d), =

and dipole south is near 79 S 110 E (near Vostok, Antarctica). The obse=
rved =

or dip poles, where the magnetic field is vertical to the earth's surfa=
ce, =

are near 76 N 101 W, and 66 S 141 E. The adopted origin of geomagnetic=
=

longitude is the meridian passing through the geomagnetic poles =

(dipole model) and the geographic south pole. (See also corrected =

geomagnetic coordinates.)

geomagnetic storm. A worldwide disturbance of the earth's =

magnetic field, distinct from regular diurnal variations. A storm =

is precisely defined as occurring when the daily Ap index exceeds =

29. (See geomagnetic activity).

Initial Phase: Of a geomagnetic storm, that period when there may =

be an increase of the middle-latitude horizontal =

intensity (H) (see geomagnetic elements) at the surface =

of the earth. The initial phase can last for hours (up to a day), =

but some storms proceed directly into the main phase without showing =

an initial phase.

Main Phase: Of a geomagnetic storm, that period when the horizontal =

magnetic field at middle latitudes is generally decreasing, owing =

to the effects of an increasing westward-flowing magnetospheric =

ring current. The northward component can be depressed as much =

as several hundred nanoteslas in intense storms. The main phase can =

last for hours, but typically lasts less than 1 day. =

Recovery Phase: Of a geomagnetic storm, that period when the depressed =

northward field component returns to normal levels. Recovery is typical=
ly =

complete in one to two days, but can take longer. =

geomagnetic time. See magnetic local time. =

geosynchronous. Term applied to any equatorial satellite =

with an orbital velocity equal to the rotational velocity of the earth.=
=

The geosynchronous altitude is near 6.6 earth radii (approximately =

36 000 km above the earth's surface). To be geostationary as well, =

the satellite must satisfy the additional restriction that its orbital =

inclination be exactly zero degrees. The net effect is that a geostatio=
nary =

satellite is virtually motionless with respect to an observer on the =

ground.

GLE. See ground-level event. =

GMT. Greenwich Mean Time. (See Coordinated =

Universal Time.) =

GPS. Global Positioning System: a network of earth-orbiting =

satellites used for precise position-finding in surveying =

and navigation.

gradual commencement. The commencement of a geomagnetic =

storm that has no well-defined onset. (See also sudden =

commencement.)

granulation. Cellular structure of the photosphere
visible at high spatial resolution. Individual granules, which =

represent the tops of small convection cells, are 200 to 2000 km in =

diameter and have lifetimes of 8 to 10 minutes.

Greenwich Mean Time (GMT). See Coordinated =

Universal Time. =

green line. A coronal emission line =

at 530.3 nm from Fe XIV (an iron atom from which 13 electrons have =

been stripped). The green line is one of the strongest (and first-recog=
nized) =

visible coronal lines. It identifies moderate-temperature =

regions of the corona ; it is enhanced in coronal =

streamers above inversion lines, and diminished =

in coronal holes. =

ground-level event (GLE). A sharp increase in =

ground-level cosmic ray count to at least 10% =

above background, associated with solar protons of energies greater =

than 500 MeV. GLEs are relatively rare, occurring only a few times =

each solar cycle. When they occur, GLEs begin a few =

minutes after flare maximum and last for a few tens =

of minutes to hours. Intense particle fluxes at lower =

energies can be expected to follow this initial burst of relativistic =

particles. GLEs are detected by neutron monitors, e.g., the monitor =

at Thule, Greenland. =

=

H

=

H component (of the geomagnetic field). See geomagnetic elements.

H alpha. The first atomic transition =

in the hydrogen Balmer series; wavelength =3D 656.3 nm. This absorption=
=

line of neutral hydrogen falls in the red part of the visible =

spectrum and is convenient for solar observations. The H alpha =

line is universally used for patrol observations of solar flare s, =

filaments, prominence s, and the fine structure of active regions.

Hale boundary. A large-scale magnetic inversion =

line of a particular magnetic orientation in the solar photosphere =

or across a sector boundary in the solar =

wind. If the polarity of the western (leading) side of the boundary =

is the same as that of the nearer solar pole at the start of a sunspot =
cycle, the boundary is said to be "Hale." If the polarity =
is opposite, the boundary is "anti-Hale." At the beginning =
of Cycle 22 (1987), the northern solar pole was negative; therefore =
in the northern hemisphere a Hale boundary separates a leading negative=
=
polarity region from a following positive one. The boundary between =
the leader spot and follower spot of =
a typical sunspot group in either hemisphere is a Hale boundary. =
heliographic. Referring to coordinates on the solar =
surface referenced to the solar rotational axis.
heliopause. The boundary surface between the solar =
wind and the external galactic medium.
heliosphere. The magnetic cavity surrounding the sun, =
carved out of the galaxy by the solar wind. =
helmet streamer. A feature of the white light corona =
(seen in eclipse or with a coronagraph) that looks like =
a ray extending away from the sun out to about 1 solar radius, =
having an arch-like base containing a cavity usually occupied =
by a prominence.
hemispherical power input (HPI). See estimated =
hemispherical power input. =
HF. See high frequency.
high frequency (HF). That portion of the radio frequency =
spectrum between 3 and 30 MHz. =
high latitude. With reference to zones of geomagnetic =
activity, 50 degrees to 80 degrees geomagnetic latitude. =
The other zones are equatorial, polar, and middle latitude. =
high-speed stream. A feature of the solar wind having velocities =
exceeding approximately 600 km/s (about double average =
solar wind values). High-speed streams that originate =

in coronal hole s are less dense than those originating =

in the average solar wind.

homologous flares. Solar flares that occur repetitively in an =

active region, with essentially the same position and with a =

common pattern of development.

Hyder flare. A filament -associated two-ribbon flare, =

often occurring in spotless regions. The flare is generally slow =

(30-60 minutes rise time in H alpha and x-ray) and follows the =

disappearance of a quiescent filament. The flare presumably results =

from the impact on the chromosphere of infalling filament =

material. The Hyder flare is named for Dr. C. Hyder, who published =

studies of such flares in 1967. =

I

IMF. See interplanetary magnetic field. =

inclination of the geomagnetic field. The angle between =

the local geomagnetic field direction and the horizon. =

(See geomagnetic elements.)

initial phase. See geomagnetic storm.

integral particle flux. The integral directional particle =

flux J(E,w) is literally the mathematical integral, with respect to t=
he =

energy E, of the differential particle flux j (E,w). It denotes =

the number of particles of energy equal to or greater than E, =

per unit area, per unit solid angle, per unit time, passing =

through an area perpendicular to the viewing direction. =

interplanetary magnetic field (IMF). The magnetic field =

carried with the solar wind.

INTERMAGNET. An international consortium or magnetic
observatories that exchange data in near-real time by satellite relay. =

invariant magnetic latitude. The geomagnetic latitude at which a partic=
ular =

line of force of the geomagnetic field, characterized by L (the altitud=
e =

of the field line at the equator), intersects the earth. The relationsh=
ip =

is given by L (cos)squared =3D 1 L is expressed in earth radii and the =

geomagnetic field is approximated by a dipole model.

inversion line. The locus of points on the solar surface =

where the radial magnetic field vanishes. Inversion lines separate =

regions of opposing polarity and are often superposed by thin, dark =

filaments, which can be used as tracers. Inside active =

regions, the areas close to and along inversion lines are preferred =

places of flare occurrence. Filament channels, plage corridors, =

arch-filament systems, and fibril patterns surrounding active regions c=
an =

be used to infer the positions of inversion lines.

ion-acoustic waves. Longitudinal waves in a plasma similar to sound =

waves in a neutral gas. Amplitudes of electron and ion oscillations are=
=

not quite the same, and the resulting Coulomb =

repulsion provides the potential energy to drive the waves.

ionogram. A plot (record) of the group path height =

of reflection of ionospherically returned (echoed) radio waves as =

a function of frequency.

ionosphere. The region of the earth's upper atmosphere =

containing free electrons and ions produced by ionization of the consti=
tuents =

of the atmosphere by solar ultraviolet radiation at very short waveleng=
ths =

(<100 nm) and energetic precipitating particles. The ionosphere influen=
ces =

radiowave propagation of frequencies less than about 300 MHz. (See D =

region, E region, F region.) =

ionospheric storm. A disturbance in the F region of the ionosphere, =

which occurs in connection with geomagnetic activity. In general, there=
=

are two phases of an ionospheric storm, an initial increase in electron=
density =

(the positive phase) lasting a few hours, followed by a decrease lastin=
g =

a few days. At low latitudes only the positive phase is usually seen. =

Individual storms can vary, and their behavior depends on geomagnetic =

latitude, season, and local time. The phases of an ionospheric storm =

are not related to the initial and main phases of a geomagnetic =

storm. =

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

J

None

K

K (kelvin). A unit of absolute temperature. One kelvin is equal
to 1 degree C, but zero on the kelvin scale corresponds to absolute
zero (-273.15 degrees C).

K corona. Of the white-light corona
(that is, the corona seen by the eye at a total solar eclipse), that
portion which is caused by sunlight scattered by electrons in the
hot outer atmosphere of the sun. This is the "true" corona. Corona
graphs are specifically constructed to separate the K corona from
the F corona.

K index. A 3-hourly quasi-logarithmic local
index of geomagnetic activity relative to an assumed quiet-day
curve for the recording site. Range is from 0 to 9. The K index measure=
s
the deviation of the most disturbed horizontal component (see geomagnet=
ic
elements).

Kelvin-Helmholtz instability. A mechanism often
invoked to explain phenomena at the magnetopause (and
sometimes the plasmapause), especially the observed
magnetic pulsations.

Km index. A 3-hourly planetary index of geomagnetic
activity calculated by the Institut de Physique du Globe
de Paris, France, from the K indexes observed at a
large, symmetrically located network of stations. The

Km indexes are used to determine the am indexes.

Kp index. A 3-hourly planetary index of geomagnetic activity
calculated by the Institut fur Geophysik der Gottingen Universitat,
F.R. Germany, from the K indexes observed at 13 stations primarily
in the Northern Hemisphere. The Kp indexes, which date from 1932,
are used to determine the ap indexes.

L

L. Heliographic longitude of a solar feature. (See solar coordinates.)

latchup. With reference to the effect of energetic
particles on spacecraft microcircuits, a serious type of single
event upset in which the microcircuit is either permanently stuck
or cannot be reset without being turned off and on.

LDE. See long duration (or decay) event.

leader spot. In a magnetically bipolar or multipolar
sunspot group, the main spot in that portion of the group west
of the principal inversion line ; also called the preceding
or p-spot. Leader and follower describe the positions
of spots with respect to apparent motion due to solar rotation. (Compar=
e
follower spot.)

LEO. Among satellite operators, a common abbreviation for Low Earth Orbit=
=2E

LET. See linear energy transfer.

LF. See low frequency.

light bridge. Observed in white light, a bright tongue
or streaks penetrating or crossing sunspot umbra e.
Light bridges typically develop slowly and have lifetimes of several
days. The appearance of a light bridge is frequently a sign of impendin=
g
active region division or dissolution. The more brilliant
forms occur with overlying bright plage and often occur
during the most active phase of the sunspot group.

light curve. A plot of intensity in a particular wavelength
or band of wavelengths against time, especially with reference to
a solar flare; for example, the time history of the x-ray output of a =
flare.

limb. The edge of the solar disk, corresponding
to the level at which the solar atmosphere becomes transparent to
visible light.

limb darkening. For certain solar spectral lines, a
lessening of the intensity of the line from the center of the solar

disk to the limb, caused by the existence of a
temperature gradient in the sun and the line-of-sight
through the solar atmosphere.

limb flare. A flare at the edge (limb) of the solar disk ; the elevated=

portions of the flare are seen with particular clarity against the dark=

sky background.

linear energy transfer (LET). The energy per unit path
length that an ionizing particle loses to the medium through which
it is traveling. The greater the LET, the more damaging the particle.

lobes. In the magnetotail, the two regions (north and south)
separated by the neutral sheet.

long duration (or decay) event (LDE). With reference to x-ray
events, those events that are not impulsive in appearance. The exact
time threshold separating impulsive from long-duration events is not
well defined, but operationally, any event requiring hours (1 or more)
to return to background levels would probably be regarded as an LDE.
It has been shown that the likelihood of a coronal mass ejection
increases with the duration of an x-ray event, and becomes virtually
certain for durations of 6 hours or more.

longitudinal component. That component of magnetic
field vector parallel to the direction of view, radial from the solar
surface at disk center.

loop prominence system (LPS). A system of prominences
in the form of loops associated with major flares, bridging the
magnetic inversion line. The lifetime of an LPS is a few hours.
Loop prominences observed in H alpha are distinctly brighter than
other prominences, and material typically flows downward along
both legs from condensation "knots" near the top of the loop. LPSs
show a high correlation with proton flares.

low frequency (LF). That portion of the radio frequency
spectrum from 30 to 300 kHz.

lowest usable frequency (LUF). The lowest frequency
that allows reliable long-range HF radio communication by
ionospheric refraction.

LPS. See loop prominence system.

LUF. See lowest usable frequency.

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

M

M(3000). The ratio of the maximum frequency reflected
once from an ionospheric layer over a 3000-km range to the
critical frequency of the layer.

magnetic bay. A relatively smooth excursion of the
H (horizontal) component (see geomagnetic elements)
of the geomagnetic field away from and returning to
quiet levels. Bays are "positive" if H increases and "negative"
if H decreases.

magnetic cloud. In general, any identifiable parcel of solar wind.
More specifically, a region of about 0.25 AU in radial dimension in
which the magnetic field strength is high and the direction of one
component of the magnetic field changes appreciably by means of
a rotation nearly parallel to a plane. Magnetic clouds may be one
manifestation of coronal mass ejections in the interplanetary medium.

magnetic local time (MLT). On earth, analogous to geographic
local time; MLT at a given location is determined by the angle subtende=
d
at the geomagnetic axis between the geomagnetic midnight meridian
and the meridian that passes through the location. 15 degrees =3D 1 h.=

The geomagnetic meridian containing the sub-solar point
defines geomagnetic local noon, and the opposite meridian defines
geomagnetic midnight. (See geomagnetic field.)

magnetic sunspot classifications. See Mount Wilson magnetic classificati=
on.

magnetogram. A plot showing the amplitude of one or
more vector components of a magnetic field versus space or time. Solar
magnetograms are a graphic representation of solar magnetic field
strengths and polarity.

magnetohydrodynamics (MHD). The study of the dynamics of an electrically
conducting fluid in the presence of a magnetic field.

magnetopause. The boundary surface between the solar
wind and the magnetosphere, where the pressure
of the magnetic field of the object effectively equals the dynamic
pressure of the solar wind.

magnetopause current sheet. An electric current sheet
that more or less coincides with the magnetopause.

magnetosheath. The region between the bow
shock and the magnetopause, characterized by very
turbulent plasma. For the earth, along the sun-earth
axis, the magnetosheath is about 2 earth radii thick.

magnetosphere. The magnetic cavity surrounding a magnetized
body, carved out of the passing solar wind by virtue
of the magnetic field, which prevents, or at least impedes, the direct
entry of the solar wind plasma into the cavity.

magnetotail. The extension of the magnetosphere in the
antisunward direction as a result of interaction with
the solar wind. In the inner magnetotail, the field
lines maintain a roughly dipolar configuration. But at greater distance=
s
in the antisunward direction, the field lines are stretched into northe=
rn
and southern lobes, separated by a plasmasheet.
There is observational evidence for traces of the earth's magnetotail
as far as 1000 earth radii downstream.

MAGSTORM. A telegraphic abbreviation used to denote
a geomagnetic storm.

main phase. See geomagnetic storm.

Maunder minimum. An approximately 70-year period,
centered near 1670, during which practically no sunspots
were observed.

maximum usable frequency (MUF). The highest frequency
that allows reliable HF radio communication over a given ground range
by ionospheric refraction. Frequencies higher than the MUF penetrate
the ionosphere and become useful for extraterrestrial
communications.

MDP. See mound prominence.

medium frequency (MF). That portion of the radio frequency
spectrum from 0.3 to 3 MHz.

mesosphere. The region of the earth's atmosphere between
the upper limit of the stratosphere (approximately
30 km altitude) and the lower limit of the thermosphere
(approximately 80 km altitude).

MHD. See magnetohydrodynamics.

micropulsation. See pulsation.

microwave burst. A radiowave signal associated with
optical and/or x-ray flare s. Microwave
bursts occur mostly at centimeter wavelengths (6 cm =3D 4995 MHz) but
are generally broadband, often extending into the millimeter and decime=
ter
domains. (See also U - burst.)

microwaves. Generically, any radio frequency of 500 MHz or more.

middle latitude. With reference to zones of geomagnetic activity,
20 degrees to 50 degrees geomagnetic latitude. Other zones
are equatorial, polar, and high latitude.

Moreton wave. A wave disturbance (also known as a flare
blast wave) generated by large flares, which is seen

to propagate horizontally across the disk of the sun
at a typical velocity of about 1000 km /s. Its presence
is more visible in wings of the H alpha line. It can cause
filaments to erupt as the wave apparently disturbs supporting
magnetic fields.

mound prominence (MDP). H alpha structure
at the solar limb that is the elevated top of numerous
small surges and/or a dense, low-lying prominence.

Mount Wilson magnetic classification. Classification
of the magnetic character of sunspot s according to
rules set forth by the Mount Wilson Observatory in California.

alpha. A unipolar sunspot group.
beta. A sunspot group having both positive and
negative magnetic polarities (bipolar), with a simple and distinct
division between the polarities.
gamma. A complex active region
in which the positive and negative polarities are so irregularly dist=
ributed
as to prevent classification as a bipolar group.
beta-gamma. A sunspot group that
is bipolar but which is sufficiently complex that no single, continuo=
us
line can be drawn between spots of opposite polarities.
delta. A qualifier to magnetic class (see below)
indicating that umbra e separated by less than 2 degrees
within one penumbra have opposite polarity.
beta-delta. A sunspot group of general
beta magnetic classification but containing one (or
more) delta spot(s).
beta-gamma-delta. A sunspot group of beta-gamma magnetic classification=

but containing one (or more) delta spot(s).
gamma-delta. A sunspot group of gamma magnetic classification but
containing one (or more) delta spot(s).

multipath. Describing a degraded condition of radio
propagation in which the radio wave splits and arrives at the receiver
via different paths. Because each path will generally have different
lengths, arrival times, and phases, the signal received will suffer fad=
ing.

N

network. (1) Chromospheric: a large-scale brightness
pattern in chromospheric (see chromosphere) and
transition region spectral lines, which is located at the borders
of the photospheric (see photosphere) supergranulation
and coincides with regions of local magnetic enhancement. These cellula=
r

patterns are typically 3 x 10E+4 km across. (2) Photospheric: a bright =
pattern
that appears in spectroheliograms in certain Fraunhofer spectrum lines=
=2E
It coincides in gross outline with the chromospheric network.

neutral line. The line that separates solar magnetic
fields of opposite polarity, typically determined from solar magnetogra=
ms
recording the longitudinal magnetic component. Neutral
lines are, more properly, inversion line s).

neutron monitor. A ground-based detector that
counts secondary neutrons generated by processes originating with
the impact of atmospheric molecules and atoms by very energetic particl=
es
(galactic or solar cosmic rays).

nm (nanometer). A unit of length, 10E-9m.

noise storm. A transient enhancement of solar radio
emission, particularly at 245 MHz, consisting of an elevated background=

emission (radiation) and Type I radio bursts.

non-great-circle propagation. Describing
a degraded condition of radio propagation caused by horizontal gradient=
s
in the ionospheric electron density. The radio wave is refracted away
from its normal great-circle path, which is the shortest distance
between two points on the earth. Strong horizontal gradients are associ=
ated
with the equatorward boundary of the auroral oval (especially
in the night sector) and the sunrise terminator.

nT (nanotesla). 10E-9 tesla or 0.000000001 tesla.

O

ordinary mode. One of the two modes of propagation
of electromagnetic waves in a magnetic plasma. For
propagation along the direction of the magnetic field, it is the mode
in which the electric vector rotates opposite to the direction of
an electron gyrating freely about the field. For propagation perpendicu=
lar
to the magnetic field, the electric vector oscillates parallel to
the primary magnetic field. (See also extraordinary mode.)

=2E

GLOSSARY OF SOLAR-TERRESTRIAL TERMS

=

P

P-angle. See solar coordinates.

p-spot. See leader spot. =

PCA. See polar cap absorption.

particle flux unit (p.f.u.). 1 p/sq cm/s/sr(steradian).

penumbra. The sunspot area that may =

surround the darker umbra or umbrae. In its mature =

form it consists of linear bright and dark elements radial from the =

sunspot umbra.

perigee. That point on the orbit of an earth-orbiting =

satellite nearest to the earth. Compare apogee.

perihelion. That point on the orbit of a sun-orbiting =

body nearest to the sun. Compare aphelion.

persistence. Continuation of existing conditions. When =

a physical parameter varies slowly, the best prediction is often persis=
tence. =

p.f.u. See particle flux unit.

phantom command. An apparent (but unintended) spacecraft =

command caused by the natural environment. (See single =

event upset or electrostatic discharge.) =

photosphere. The lowest visible layer of the solar =

atmosphere; corresponds to the solar surface viewed in white =

light. Sunspots and faculae are observed in the photosphere.

pitch angle. In a plasma, the angle =

between the velocity vector of a charged particle and the direction =

of the ambient magnetic field. =

plage. On the sun, an extended emission feature of =

an active region that is seen from the time of emergence =

of the first magnetic flux until the widely scattered remnant magnetic =

fields merge with the background. Magnetic fields are more intense =

in plage, and temperatures are higher than in surrounding, quiescent =

regions. =

plage corridor. A low-intensity division in chromospheric =

(see chromosphere) plage coinciding =

with a polarity inversion line and marked by narrow =

filament segments and/or fibrils spanning the corridor.

plasma. A gas that is sufficiently ionized so as to =

affect its dynamical behavior.

plasma frequency. The characteristic frequency =

of free plasma oscillations, determined by the balance =

between electron kinetic energy and ion Coulomb attraction. =

plasmapause. The outer surface of the plasmasphere. =

plasmasheet. In the magnetosphere, the =

core of the magnetotail in which the plasma =

is hotter and denser than in the tail lobes north and south of it. =

The plasmasheet is thought to be separated from the tail lobes by =

the sheet of the "last closed field lines" and it typically lies =

beyond geosynchronous orbit.

=

plasmasphere. In the magnetosphere, =

a region of relatively cool (low energy) and dense plasma =

that may be considered an outer extension of the ionosphere =

with which it is coupled. Like the ionosphere, the plasmasphere tends =

to co-rotate with the earth. =

polar cap absorption (PCA). An anomalous condition =

of the polar ionosphere whereby HF and VHF (3-300 MHz) =

radiowaves are absorbed, and LF and VLF (3-300 kHz) radiowaves are =

reflected at lower altitudes than normal. PCAs generally originate =

with major solar flares, beginning within a few hours =

of the event and maximizing within a day or two of onset. As measured =

by a riometer, the PCA event threshold is 2 dB of absorption =

at 30 MHz for daytime and 0.5 dB at night. In practice, the absorption=
=

is inferred from the proton flux at energies greater than 10 MeV, =

so that PCAs and proton event s are simultaneous. However, =

the transpolar radio paths may still be disturbed for days, up to =

weeks, following the end of a proton event, and there is some ambiguity=
=

about the operational use of the term PCA. =

=

polar crown. A nearly continuous ring of filaments occasionally =

encircling either polar region of the sun (latitudes higher than =

50 degrees).

polar plumes. Fine, ray-like structures of the =

solar corona, best observed in the solar polar regions =

during solar minimum.

polar rain. In the earth's upper atmosphere, a weak, =

structureless, near-isotropic flux of electrons precipitating =

into the polar caps. =

pore. A feature in the photosphere, =

1 to 3 arc seconds in extent, usually not much darker than the dark =

spaces between photospheric granules. It is distinguished from a sun
spot by its short lifetime, 10 to 100 minutes.

post-flare loops. A loop prominence =

system often seen after a major two-ribbon flare, =

which bridges the ribbons. Lifetimes are several hours. =

preheating. A slow brightening of an =

active region, both optically and in x-rays, =

that sometimes precedes moderate and larger solar flare =

events by some tens of minutes. =

PRESTO. An alert issued by a Regional Warning Center =

to give rapid notification of significant solar or geophysical activity=
=

in progress or just concluded.

prominence. A term identifying cloud-like features =

in the solar atmosphere. The features appear as bright structures =

in the corona above the solar limb and =

as dark filaments when seen projected against the solar =

disk. Prominences are further classified by their shape (for example, =

mound prominence, coronal rain) and activity. They are most clearly =

and most often observed in H alpha. =

proton event. The measurement of proton flux reaching and sustaining =

> =3D 10 p.f.u. for at least 15 min at energies > 10 MeV =

by the primary SESC geosynchronous satellite. (See polar cap absorpti=
on.) =

The start time of the event is defined as the earliest time at which ev=
ent =

thresholds have been reached. There are two event thresholds, namely p=
10 and p100. =

(p10, a proton event reaching 10 p.f.u. at > 10 MeV and p100 reaching 1=
00 p.f.u. at > 100 MeV).

proton flare. Any flare producing significant counts of protons with ene=
rgies =

exceeding 10 MeV in the vicinity of the earth. =

pulsation. A rapid fluctuation of the geomagnetic =

field having periods from a fraction of a second to tens of minutes =

and lasting from minutes to hours. There are two main patterns: Pc =

(a continuous, almost sinusoidal pattern), and Pi (an irregular pattern=
). =

Pulsations occur at magnetically quiet as well as disturbed =

times. Pc's are grouped, according to their physical and morphological =

properties, into five categories:

Pc1 - periods 0.2-5 s. May occur in bursts ("pearls"), or in consecutiv=
e =

groups of pulsations with sharply decreasing frequency.

Pc2 - periods 5-10 s. Do not seem to be physically related to Pc1 or Pc=
3.

Pc3 - periods 10-45 s. Are observed over a wide range of latitudes.

Pc4 - periods 45-150 s. Are also known as Pc II or Pc. =

Pc5 - periods 150-600 s. Are sometimes called giant micropulsations. =

Q

Q index. A 15-minute index of geomagnetic =

activity intended for high-latitude (auroral) =

stations. After quiet diurnal variations are removed, Q is the largest =

deviation scaled from the undisturbed level for the two horizontal =

components. (This differs from the K index, =

which is scaled from the largest relative deviation.) The 15-minute =

periods are centered on the hour and at 15, 30, and 45 minutes past =

each hour. The range of Q is from 0 to 11; the upper limit, in nanotesl=
as, =

for each index value is given below.

Q =3D 0 1 2 3 4 5 6 7 8 9 10 11
10 20 40 80 140 240 400 660 1000 1500 2200 Unlimited

QDC. See quiet day curve. =

quiescent prominence. A long, sheet-like prominence =

nearly vertical to the solar surface. Except in an occasional activated=
=

phase, shows little large-scale motion, develops very slowly, =

and has a lifetime of several solar rotations. Quiescent prominences =

form within the remnants of decayed active regions, =

in quiet areas of the sun between active regions, or at high solar =

latitudes where active regions seldom or never form. (See filament).

quiet. A descriptive word specifically meaning (1) =

a probability of less than 50% for a C-class flare =

(see x-ray flare class) in a sunspot region; =

(2) geomagnetic activity levels such that Ak < 8.

=

quiet day curve (QDC). Especially in connection with =

the components of the geomagnetic field (see geomagnetic =

elements), the trace expected in the absence of activity. =

The K index and Q index are measured from deviations =

relative to a QDC. Riometer and neutron monitor deviations =

are also measured relative to a QDC. =

=

R =

R-number. See sunspot number. =

radar aurora. Radar returns from electron density irregularities =

in auroral regions. The strength of radar auroral returns is aspect =

dependent.

radiation belts . Regions of the magnetosphere =

roughly 1.2 to 6 earth radii above the equator in which charged particl=
es =

are stably trapped by closed geomagnetic field lines. =

There are two belts. The inner belt is part of the plasmasphere
and corotates with the earth; its maximum proton density lies =

near 5000 km. Inner belt protons are mostly high energy (MeV range) =

and originate from the decay of secondary neutrons created during =

collisions between cosmic ray s and upper atmospheric =

particles. The outer belt extends on to the magnetopause =

on the sunward side (10 earth radii under normal quiet conditions) =

and to about 6 earth radii on the nightside. The altitude of maximum =

proton density is near 16 000-20 000 km. Outer belt protons are lower =

energy (about 200 eV to 1 MeV) and come from the solar =

wind. The outer belt is also characterized by highly variable =

fluxes of energetic electrons. The radiation belts are often called =

the "Van Allen radiation belts" because they were discovered in =

1968 by a research group at the University of Iowa led by Professor =

J. A. Van Allen.

radio burst. See radio emission.

radio emission. Emission of the sun in radio wavelengths =

from centimeters to dekameters, under both quiet and disturbed conditio=
ns. =

Some patterns, known variously as noise storms, bursts, and sweeps, =

are identified as described below. These types of emission are subjecti=
vely =

rated on an importance scale of 1 to 3, 3 representing the most intense=
=2E =

Type I. A noise storm composed of many short, narrow-band bursts =

in the meter wavelength range (300-50 MHz), of extremely variable =

intensity. The storm may last from several hours to several days.

Type II. Narrow-band emission (sweep) that begins in the meter =

range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter =

wavelengths (10 MHz). Type II emissions occur in loose association =

with major flares and are indicative of a shock wave moving through the=
=

solar atmosphere. =

Type III. Narrow-band bursts that sweep rapidly (seconds) from =

decimeter to dekameter wavelengths (500-0.5 MHz). They often occur =

in groups and are an occasional feature of complex solar active regions=
=2E =

Type IV. A smooth continuum of broad-band bursts primarily =

in the meter range (300-30 MHz). These bursts occur with some major =

flare events; they begin 10 to 20 minutes after the flare maximum =

and can last for hours. =

Type V. Short-duration (a few minutes) continuum noise in the =

dekameter range usually associated with Type III bursts. =

Rayleigh-Taylor instability. A fluted or ripple-like =

instability that can develop on a fluid or plasma boundary surface =

and propagate along it. This instability is often invoked to explain =

phenomena in the ionosphere and magnetosphere. =

reconnection. A process by which differently directed =

field lines link up, allowing topological changes of the magnetic =

field to occur, determining patterns of plasma flow, and resulting =

in conversion of magnetic energy to kinetic and thermal energy of =

the plasma. Reconnection is invoked to explain the energization and =

acceleration of the plasma s that are observed in solar flares, magnet=
ic =

substorms, and elsewhere in the solar system. =

recurrence. Used especially to express a tendency of =

some solar and geophysical parameters to repeat a trend and sometimes =

the actual value of the parameter itself every 27 days (the approximate=
=

rotation period of the sun).

red line. An intense coronal emission line at 637.4 nm from Fe X =

(an iron atom from which nine electrons have been stripped). =

It identifies relatively cooler regions of the corona. =

=

region number. A number assigned by SESC to a plage
region or sunspot group if one of the following =

conditions exists: (1) the region is a group of at least sunspot =

classification C; (2) two or more separated optical reports confirm =

the presence of smaller spots; (3) the region produces a solar flare; =

(4) the region is clearly evident in H alpha and exceeds 5 heliographi=
c =

degrees in either latitude or longitude. (See also active region.)

regression. A functional relationship between two or =

more correlated variables that is often empirically determined from =

data and is used especially to predict values of one variable when =

values of the others are given. =

RI. The international standard relative sunspot number. =

right ascension. The angular distance measured eastward =

along the celestial equator from the vernal =

equinox. It is expressed in hours, minutes, and seconds =

(the circumference of the celestial equator is defined as 24 hours). =

rigidity. A measure of how easily a particle =

is deflected by a magnetic field, expressed in megavolts (MV) per =

nucleon. It is the momentum per unit charge. The integral proton spectr=
um =

of a flare can be expressed as an exponential function =

of rigidity rather than a power function of energy. =

ring current. In the magnetosphere, =

a region of current that flows in a disk-shaped region near =

the geomagnetic equator in the outer of the Van Allen radiation =

belts. The current is produced by the gradient and curvature drift =

of the trapped charged particles. The ring current is greatly augmented=
=

during magnetic storms because of the hot plasma injected =

from the magnetotail. The ring current causes a worldwide =

depression of the horizontal geomagnetic field during =

a magnetic storm.

riometer (Relative Ionospheric Opacity meter). A specially =

designed ground-level radio receiver for continuous monitoring =

of cosmic noise. The absorption of cosmic noise in =

the polar regions is very sensitive to the solar low-energy =

cosmic ray flux. Absorption events are known as PCA s =

(polar cap absorption) and are primarily associated with major =

solar flares. =

rudimentary. A type of sunspot penumbra =

characterized by granular (rather than filamentary) structure, brighter=
=

intensity than the umbra, and narrow extent, and possibly =

only partially surrounding the umbra. Penumbrae are typically rudimenta=
ry =

during the sunspot formative and decay phases. =

=

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

=

S

Satellite Anomaly. The usually undesirable response of spacecraft system=
s to =

variations in the space environment. High energy particles cause detec=
tor
noise and/or physical damage to solar cells, electronics, and memory de=
vices
(single event upsets or "bitflips"). Large and varying low-to-medium e=
nergy
particle fluxes can result in a charge buildup between spacecraft compo=
nents,
especially during the eclipse season and during spacecraft maneuvers. =

Atmospheric drag on spacecraft below approximately 1,000 km can increas=
e
during geomagnetic storms, resulting in cross-track and in-track orbit =
errors
and orientation problems. Various communication interference problems
result during solar radio bursts from flares when the Sun is within the=
field of =

view of the ground tracking dish. Ionospheric irregularities during =

geomagnetic storms can cause radio telemetry scintillation and fading
=

S-band. Radio frequencies between 1.55 and 5.20 =

GHz. For satellite communication, the term usually refers to frequencie=
s =

used for earth-space communication near 2.2 GHz. =

S component. The slowly varying (weeks or longer) fluctuation =

observed in solar radio emission at microwave frequencies =

(wavelengths from 3 to 100 cm).

SC. See sudden commencement. =

scintillation. Describing a degraded condition of radio =

propagation characterized by a rapid variation in amplitude and/or =

phase of a radio signal (usually on a satellite communication link) =

caused by abrupt variations in electron density anywhere along the =

signal path. It is positively correlated with spread F and =

to a lesser degree, sporadic E. Scintillation effects =

are the most severe at low latitudes, but can also be a problem at =

high latitudes, especially in the auroral oval and over the polar caps.=
=

sector boundary. In the solar wind, the area of demarcation between =

sectors, which are large-scale features distinguished by the =

predominant direction of the interplanetary magnetic field, =

toward the sun (a negative sector), or away from the sun =

(a positive sector). The sector boundary separating fields =

of opposite polarity is normally narrow, passing the earth within =

minutes to hours as opposed to the week or so needed for passage of =

a typical sector. The solar wind velocities in the boundary region =

are typically among the lowest observed. =

SEU. See single event upset.

SFE. Solar flare effect. (See crochet.)

s.f.u. See solar flux unit. 10E-22 W/sq m/Hz =3D 10 000 jansky.

SHF. See super high frequency.

shock. A discontinuity in pressure, density, and particle =

velocity, propagating through a compressible fluid or plasma.

short wave fade (SWF). An abrupt decrease of HF radio =

signal strength, lasting from minutes to hours, caused by increased =

day-side ionization from some solar flares. An SWF is one effect =

under the broad category of sudden ionospheric disturbances (SIDs). =

SI. See sudden impulse. =

SID. See sudden ionospheric disturbance. =

sidereal. Referring to a coordinate system fixed with =

respect to the distant stars. =

simultaneous flares. Unrelated solar flares =

that occur at nearly the same time. Compare sympathetic =

flares.

single event upset (SEU). With reference to the effects =

of energetic particles on spacecraft microcircuits, an unexpected =

change in the logic state of a single digital bit. SEUs can be either =

"soft" (the microcircuit is not damaged and can be rewritten to =

either state), or a latchup, which cannot easily be reset.

smoothed sunspot number. An average of 13 monthly RI =

numbers, centered on the month of concern. The 1st and 13th months =

are given a weight of 0.5. =

solar activity. Transient perturbations of the solar =

atmosphere as measured by enhanced x-ray emission =

(see x-ray flare class), typically associated =

with flares. Five standard terms are used to describe =

the activity observed or expected within a 24-h period:

Very low - x-ray events less than C-class. =

Low - C-class x-ray events.

Moderate - isolated (one to 4) M-class x-ray events. =

High - several (5 or more) M-class x-ray events, =

or isolated (one to 4) M5 or greater x-ray events. =

Very high - several (5 or more) M5 or greater x-ray events. =

=

solar constant. The total radiant energy received vertically =

from the sun, per unit area per unit of time, at a position just outsid=
e =

the earth's atmosphere when the earth is at its average distance from =

the sun. Radiation at all wavelengths from all parts of the solar disk =
is =

included. Its value is approximately 2.00 cal/sq cm/min =3D 1.37 kW/sq =
m =

and it varies slightly (by approximately 0.1%) from day to day in res=
ponse =

to overall solar features.

solar coordinates. Specifications for a location on =

the solar surface. The location of a specific feature on the sun (for =

example, a sunspot) is complicated by the fact that =

there is a tilt of 7.25 degrees between the ecliptic plane and the sol=
ar =

equatorial plane as well as a true wobble of the =

solar rotational axis. (Only twice a year are the solar north pole =

and the celestial north pole aligned.) Consequently, to specify a =

location on the solar surface, three coordinates (P, B, L) are necessar=
y =

to define a grid. Daily values for the coordinates =

in Coordinated Universal Time (UTC) are listed in The Astronomical =

Almanac published annually by the U.S. Naval Observatory. =

The terms used to refer to the coordinates are defined as follows: =

P-angle (or P): The position angle between the geocentric =

north pole and the solar rotational north pole measured eastward from =

geocentric north. The range in P is +/- 26.3l degrees.

Bo: Heliographic latitude of the central point of the solar disk; =

also called the B-angle. The range of Bo is +/- 7.23 degrees, =

correcting for the tilt of the ecliptic with respect to the solar
equatorial plane. =

Example: If (P,Bo) =3D (-26.21 degrees, -6.54 degrees), the heliogra=
phic =

latitude of the central point on the solar disk is -6.54 degrees =

(the north rotational pole is not visible), and the angle between =

the projection onto the disk of the geocentric north pole and the =

solar north rotational pole is 26.21 degrees to the west. =

Lo: Heliographic longitude of the central point of the solar disk. The =

longitude value is determined with reference to a system of fixed =

longitudes rotating on the sun at a rate of 13.2 degrees /day =

(the mean rate of rotation observed from central meridian transits =

of sunspots). The standard meridian on the sun is defined =

to be the meridian that passed through the ascending node of the sun'=
s =

equator on 1 January 1854 at 1200 UTC and is calculated for the prese=
nt =

day by assuming a uniform sidereal period of rotation =

of 25.38 days. =

Once P, Bo, and Lo are known, the latitude, central meridian distance, =
and longitude of a specific solar feature can be determined as follow=
s:

Latitude. The angular distance from the solar equator, measured north =
or south along the meridian.

Central meridian distance (CMD). The angular distance in solar longitud=
e =
measured from the central meridian. This position is relative to the =
view from earth and will change as the sun rotates; therefore, this =
coordinate should not be confused with heliographic positions that =
are fixed with respect to the solar surface. =

Longitude. The angular distance from a standard meridian (0 degrees =
heliographic longitude), measured from east to west (0 degrees =
to 360 degrees) along the sun's equator. It is computed by =
combining CMD with the longitude of the central meridian at the time =
of the observation, interpolating between ephemeris =
values (for 0000 UT) by using the synodic rate of solar =
rotation (27.2753 days, 13.2 degrees per day). =

solar cycle. See sunspot cycle. =

solar flare effect (SFE). See crochet.

solar flux unit (s.f.u.). See s.f.u.

solar maximum. The month(s) during the sunspot cycle =
when the smoothed sunspot number reaches =
a maximum. A recent solar maximum occurred in December 1979. =

solar minimum. The month(s) during the sunspot =
cycle when the smoothed sunspot number reaches =
a minimum. A recent solar minimum occurred in September 1986. =

solar radio emission. See radio emission.

solar rotation rate. (1) synodic: l3.39 degrees -2.7 degrees sin squared=
=
(solar latitude)/day. (2) sidereal: 14.38 degrees -2.7 sin sq.(solar=
latitude)/day. The difference between sidereal and synodic =

rates is the earth orbital motion of 0.985 degrees/day. =

=

solar sector boundary (SSB). The boundary between large-scale =

unipolar magnetic regions on the sun's surface, as determined =

from inversion lines mapped using filaments and filament =

channels, or large-scale magnetograms. The supposed solar =

signature of an interplanetary sector boundary.

solar wind. The outward flow of solar particles and =

magnetic fields from the sun. Typically at 1 AU, solar wind velocities =

are near 375 km/s and proton and electron densities are near 5 per cubi=
c =

centimeter. The total intensity of the interplanetary magnetic field i=
s =

nominally 5 nT. =

solstice. A point on the ecliptic where =

the sun reaches its greatest absolute declination. =

There are two of these points, halfway between the equinoxes; =

they mark the beginning of summer and winter.

South Atlantic anomaly (SAA). A region of the earth =

centered near 25 degrees S 50 degrees W (geographic =

coordinates, near the Atlantic coast of Brazil) of low geomagnetic =

field intensity owing to the fact that the geomagnetic field axis =

is offset from the center of the earth (see corrected geomagnetic =

coordinates.) One consequence of the SAA is that trapped particles =

in the plasmasphere drift closer to the earth's surface =

and can more easily be lost into the atmosphere. The result is that =

the F region (see ionosphere) is highly variable in this region, an=
d =

satellites in low earth orbits suffer greater radiation doses when =

they pass through the SAA. There is a corresponding location of =

maximum geomagnetic field intensity in Southeast Asia.

spacecraft charging. A term that encompasses all the =

charging effects on a spacecraft due to the environment in space. =

Occasionally this term is used in a more limited sense to mean surface =

charging. =

spicules. Rapidly changing, predominantly vertical, =

spike-like structures in the solar chromosphere =

observed above the limb. Spicules appear to be ejected =

from the low chromosphere at velocities of 20 to 30 km/s
reaching a height of about 9000 km and then falling back or fading. =

The total lifetime is 5 to 10 minutes. =

sporadic E (Es). Transient, localized patches of relatively high =

electron density in the E region of the ionosphere, which =

significantly affect radiowave propagation. Sporadic E =

can occur during daytime or nighttime, and it varies markedly with =

latitude. Es can be associated with thunderstorms, meteor showers, sol=
ar =

activity and geomagnetic activity. =

spray (SPY). Luminous material ejected from a solar flare with sufficient=
=

velocity to escape the sun (675 km/s). Sprays are usually seen in H al=
pha =

with complex and rapidly changing form. There is little evidence that =

sprays are focused by magnetic fields. Compare surge.

spread F. A condition of the F region
of the ionosphere caused by patches of ionization =

that scatter or duct radio signals, characterized on ionograms =

by a wide range of heights of reflected pulses. In equatorial latitudes=
=

spread F is most commonly observed at night and may be negatively =

correlated with geomagnetic activity; at high latitudes =

spread F occurs throughout the daytime and is positively correlated =

with magnetic activity. The latitude of minimum occurrence of spread =

F is near 30 degrees magnetic latitude.

SPY. See spray.

Sq. The diurnal variation of the geomagnetic =

field. The Sq variation is explained in terms of solar tidal motions =

of the ionosphere and thermally driven ionospheric =

winds.

SSB. See solar sector boundary.

SSC. See sudden commencement.

storm. See geomagnetic storm.

stratosphere. That region of the earth's atmosphere =

between the troposphere and the mesosphere. =

It begins at an altitude of temperature minimum at approximately 13 =

km and defines a layer of increasing temperature up to about 50 km. =

STRATWARM. A code word designating a major =

disturbance of the winter, polar, middle atmosphere from the tropopause=
=

to the ionosphere, lasting for several days at a time =

and characterized by a warming of the stratospheric temperature by =

some tens of degrees. There is no evidence that stratwarms are caused =

by solar events, or that they affect the lower atmosphere. (In fact, =

the disturbance may be generated by tropospheric conditions). =

=

subflare. See flare.

substorm. A geomagnetic perturbation lasting 1 to 2 =

hours, which tends to occur during local post-midnight nighttime. =

The magnitude of the substorm is largest in the auroral zone, potential=
ly =

reaching several thousand nanoteslas. A substorm corresponds to an =

injection of charged particles from the magnetotail =

into the auroral oval.

sudden commencement (SC, or SSC for Storm Sudden Commencement). =

An abrupt increase or decrease in the northward component =

(see geomagnetic elements) of the geomagnetic field, which marks the =

beginning of a geomagnetic storm. SCs occur almost simultaneously =
worldwide but with locally varying magnitudes.
sudden impulse (SI + or SI -). A sudden perturbation, =
positive or negative, of several nanoteslas in the northward component =
(see geomagnetic elements) of the low-latitude =
geomagnetic field, not associated with a following geomagnetic =
storm. (An SI becomes an SC if a storm follows.) =
Sudden ionospheric disturbance (SID). Any of several =
radio propagation anomalies due to ionospheric changes resulting from =
solar flares. Anomalies include short wave =
fades, enhancements of atmospherics, phase shifts, =
cosmic noise absorptions, and signal enhancements.
sudden ionospheric disturbance (SID). Any of several =
radio propagation anomalies due to ionospheric changes resulting from =
solar flares. Anomalies include short wave fades, enhancements =
of atmospherics, phase shifts, cosmic noise =
absorptions, and signal enhancements.
sunspot. An area seen as a dark spot, in contrast with =
its surroundings, on the photosphere of the sun. Sunspots =
are concentrations of magnetic flux, typically occurring in bipolar =
clusters or groups. They appear dark because they are cooler than =
the surrounding photosphere. Larger and darker sunspots sometimes =
are surrounded (completely or partially) by penumbrae. =
The dark centers are umbrae. The smallest, immature =
spots are sometimes called pores. =
sunspot classification (Modified Zurich Sunspot =
Classification). As devised by McIntosh, a 3-letter designation =
of the optical, white-ligh t characteristics of =
a sunspot group. The general form of the designation =
is Zpc. One letter is chosen from each of the following three categorie=
s. =

The categories are illustrated in Appendix C.

Z (the modified Zurich class of the group):

A - A small single sunspot or very small group =

of spots with the same magnetic polarity, without penumbra.

B - Bipolar sunspot group with no penumbra. =

=

C - An elongated bipolar sunspot group. One sunspot must =

have penumbra, and penumbra does not exceed 5 degrees in =

longitudinal extent.

D - An elongated bipolar sunspot group with penumbra on both ends of =

the group; longitudinal extent of penumbra is more than 5 =

degrees, but does not exceed 10 degrees. =

=

E - An elongated bipolar sunspot group with penumbra on both ends. =

Longitudinal extent of penumbra exceeds 10 degrees but not =

15 degrees

F - An elongated bipolar sunspot group with penumbra on both ends. =

Longitudinal extent of penumbra exceeds 15 degrees.

H - A unipolar sunspot group with penumbra. Class H sunspot groups =

become compact Class D or larger when the penumbra exceeds 5 =

degrees in longitudinal extent.

p (the penumbra type of the largest spot in the group): =

x - no penumbra =

r - rudimentary =

s - small (< =3D 2.5 degrees north-south diameter), symmetric =

a - small, asymmetric =

h - large (> 2.5 degrees north-south diameter), symmetric
k - large, asymmetric =

=

c (the compactness of the group):

x - a single spot =

o - open =

i - intermediate =

c - compact =

sunspot cycle. The approximately 11-year quasi-periodic =

variation in the sunspot number. The polarity pattern =

of the magnetic field reverses with each cycle. Other solar phenomena, =

such as the 10.7-cm solar radio emission, exhibit =

similar cyclical behavior.

sunspot number. A daily index of sunspot =

activity (R), defined as R =3D k (10g +s) where s =3D number of =

individual spots, g =3D number of sunspot groups, and k is an =

observatory factor (equal to 1 for the Zurich Observatory and =

adjusted for all other observatories to obtain approximately the =

same R number). The standard number, RI, once derived at Zurich (see W=
olf =

number), is now being derived at Brussels and is denoted by RI. Often, =

the term "sunspot number" is used in reference to the widely distribute=
d =

smoothed sunspot number. =

super high frequency (SHF). That portion of the radio =

frequency spectrum from 3 GHz to 30 GHz.

supergranulation. A system of large-scale velocity =

cells that does not vary significantly over the quiet solar surface =

or with phase of the solar cycle. The cells are presumably convective =

in origin with weak upward motions in the center, downward motions =

at the borders, and horizontal motions of typically 0.3 to 0.4 km/s. =

Magnetic flux is more intense along the borders of the cells.

=

surge. A jet of material from active regions =

that reaches coronal heights and then either fades or returns into =

the chromosphere along the trajectory of ascent. Surges =

typically last 10 to 20 minutes and tend to recur at a rate of approxim=
ately =

1 per hour. Surges are linear and collimated in form, as if highly =

directed by magnetic fields. Compare spray.

SWF. See short wave fade. =

sympathetic flares. Solar flares in different active regions that appare=
ntly =

occur as the common result of activation of a coronal connection betwee=
n the =

regions. Compare simultaneous flares.

synodic. Referring to a coordinate system fixed on the earth.

synoptic chart. A map of the whole sun in absolute =

heliographic coordinates, displaying an integrated view of solar featur=
es =

observed during a Carrington rotation. =

T

TEC. See total electron content.

TED. Total (particle) Energy Deposition. The TIROS/NOAA =

instrument used to estimate the hemispherical power input. (See =

estimated hemispherical power input.) =

tenflare. A solar flare accompanied by a 10-cm radio noise burst =

of intensity greater than 100% of the pre-event 10-cm flux value.

Theophrastus (Theo). The name of the rule-based =

expert system used to assist SESC solar region =

analysis and solar flare prediction. =

thermosphere. That region of the earth's atmosphere =

where the neutral temperature increases with height. It begins above =

the mesosphere at about 80-85 km and extends to the exosphere.

total electron content (TEC). The number of electrons =

along a ray path between a transmitter and a receiver. Units are electr=
ons =

per square meter. This number is significant in determining ionospheric=
=

effects such as refraction, dispersion, and group delay on radio waves,=
=

and can be used to estimate critical frequencies. The TEC is strongly =

affected by solar activity and geomagnetic activity.

transition region. That region of the solar atmosphere =

lying between the chromosphere and the corona =

where the temperature rises from 10000 K to 1000000 K. =

The transition region is only a few thousand kilometers thick. =

=

transverse. Component of magnetic field vector perpendicular =

to direction of view, parallel to solar surface at disk center.

troposphere. The lowest layer of the earth's atmosphere, =

extending from the ground to the stratosphere at approximately =

13 km of altitude.

two-ribbon flare. A flare that has developed as a pair of bright strands=
=

(ribbons) on both sides of an inversion line of the solar magnetic fie=
ld. =

Type I, II, III, IV, V. See radio emission. =

U

U-burst. A radio noise burst associated with =

some flares. It has a U-shaped appearance in =

an intensity-vs.-frequency plot. The minimum intensity =

falls roughly between 500 and 2000 MHz. A U-burst is sometimes =

called a Castelli U. =

UHF. See ultrahigh frequency.

ultrahigh frequency (UHF). That portion of the radio =

frequency spectrum from 300 MHz to 3 GHz.

ultraviolet (UV). That part of the electromagnetic =

spectrum between 5 and 400 nm.

umbra. The dark core or cores (umbrae) in a sunspot
with penumbra, or a sunspot lacking penumbra. =

UMR. See unipolar magnetic region. =

unipolar magnetic region (UMR). A large-scale =

photospheric region where the magnetic elements are predominantly =

of one polarity (for example, the solar polar regions).

Universal Time (UT). A shortened form of the more correct =

Coordinated Universal Time (UTC). =

unsettled. With regard to geomagnetic activity, =

a descriptive word between quiet and active specifically =

meaning that the Ak index is between 8 and 16. =

upsets. See single event upsets.

UT or UTC. See Coordinated Universal Time. =

UV. See ultraviolet. =

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

V

Van Allen radiation belts. See radiation belts.

vernal equinox. The equinox that occurs in March.
Compare autumnal equinox.

very high frequency (VHF). That portion of the radio
frequency spectrum from 30 to 300 MHz.

very low frequency (VLF). That portion of the radio
frequency spectrum from 3 to 30 kHz.

VHF. See very high frequency.

VLF. See very low frequency.

W

white light (WL). The sum of all visible wavelengths
of light (400-700 nm) so that all colors are blended to appear white
to the eye. No pronounced contribution from any one spectral line
(or light-emitting element) is implied.

white-light flare. A major flare in which small parts become visible
in white light. This rare continuum emission is caused by energetic
particle beams bombarding the lower solar atmosphere. Such flares
are usually strong x-ray, radio, and particle emitters.

wing. Portion of a spectroscopic absorption (or emission) line
between the core of the line and the continuum adjacent to the line.

WL. See white light.

Wolf number. An historic term for sunspot number. In 1849,
R. Wolf of Zurich originated the general procedure
for computing the sunspot number. The record of sunspot numbers that
he began has continued to this day.

WWV. Call letters of the radio station over which National
Institute of Standards and Technology broadcasts time-standard
signals at 2.5, 5, 10, 15, and 20 MHz. Solar-terrestrial conditions
and forecasts are broadcast at 18 minutes past the hour.

X

X-band. Designates those radio frequencies between 5.2 and 10.9 GHz.

x-ray. Radiation of extremely short wavelength (generally less than 1 nm)=
=2E

x-ray background. A daily average background x-ray flux in the
0.1 to 0.8 nm range. It is a midday minimum given in terms of x-ray fl=
are class.

x-ray burst. A temporary enhancement of the x-ray
emission of the sun. The time-intensity profile of soft x-ray
bursts is similar to that of the H alpha profile of an
associated flare. Soft x-rays are those of energies less than
20 keV, or wavelengths longer than 0.05 nm.

x-ray flare class. Rank of a flare
based on its x-ray energy output. Flares are classified by the
Space Environment Services Center according to the order of magnitude
of the peak burst intensity (I) measured at the earth in the 0.1 to
0.8 nm band as follows:

Class Peak, 0.1 to 0.8 nm band

W/square m ergs/square cm/s

B I < 10.0E-06 I < 10.0E-03
C 10.0E-06 < =3D I < 10.0E-05 10.0E-03 < =3D I < 10.0E-0=
2
M 10.0E-05 < =3D I < 10.0E-04 10.0E -02< =3D I < 10.0E-0=
1
X I > =3D 10.0E-04 I > =3D 10.0E-01

x-ray flare termination. The end time is defined as the time the flux ha=
s
decayed to 1/2 the peak flux of the event.

=

Y

yellow line. A coronal emission line at 569.4 nm from
Ca XV (a calcium atom from which 14 electrons have been stripped).

It identifies the hottest regions of the corona.

Z

Z. Zulu Time. (See Coordinated Universal Time.)

Z component of the geomagnetic field. See geomagnetic elements.

Zeeman effect. The splitting of spectral emission lines
due to the presence of a strong magnetic field. Briefly, the lines
split into three or more components of characteristic polarization;
the components are circular if the local magnetic
field is parallel to the line of sight, and linear
if the field is perpendicular to the line of sight. The amount of
splitting is proportional to the strength of the field.

Zurich sunspot classification. See sunspot classification.

Zurich sunspot number. See sunspot number.

APPENDIX A: ACRONYMS AND INITIALISMS

AFB - Air Force Base
AFGL - formerly the Air Force Geophysics Laboratory at Hanscom
AFB, MA. Recently renamed Phillips Laboratory (See PL)
AFSFC - Air Force Space Forecast Center (at Colorado Springs, CO)
ALMEDS - ALaskan MEteorological Data System
ASCII - American Standard Code for Information Interchange
AUTODIN - AUTOmatic DIgital Network
AWS - Air Weather Service (USAF)

COMEDS - CONUS MEteorological Data System
CONUS - CONtinental United States

DALAS - Disk And Limb Activity Summary
DMS - data management system
DMSP - Defense Meteorological Satellite Program
DOC - Department Of Commerce
DOD - Department Of Defense

EOS - Earth Observing System
ERL - Environmental Research Laboratories
ESA - European Space Agency

GMS - Geostationary Meteorological Satellite (Japan)
GOES - Geostationary Operational Environmental Satellite
(Also called SMS/GOES)
GSFC - Goddard Space Flight Center (Greenbelt, MD)

HAO - High Altitude Observatory
HEPAD - High Energy Proton and Alpha Detector (on GOES and TIROS)
HLMS - High Latitude Monitoring Station
HST - Hubble Space Telescope

IAG - International Association of Geomagnetism and Aeronomy
ICE - International Cometary Explorer (formerly ISEE-3)
IGY - International Geophysical Year
IMP - Interplanetary Monitoring Platform
IMS - International Magnetospheric Study
INTERMAGNET - An International Consortium of Magnetic Observatories
ISEE-3 - International Sun Earth Explorer-3.

I'm going to take my test on 12/8. I think I'll just stay
above 50 MHz. I've listened to these bands on my scanner, and they
sound a bit more polite and civilized than some of the people on HF
appear to be.

Pete.

I think you'll find that Glenn probably created his own web pages and
Fisher, by admission of his students created his for him as part of a
class project. Interesting to note that fisher's page never changes. I
would venture a guess that the students have either graduated or
recognize the futility of doing any good deeds for fisher.

> Tnx,
> Chris
--
Hi Chris
A subcarrier is a carrier used to modulate another carrier.

Example -- A certain Stereo Fm station transmits at 97.3 MHz. This is the main carrier. Audio from 20 Hz to about 15KHz modulates this carrier directly -- this is the left plus right data (Mono). Also sent is a subcarrier at 38 kHz which is a double sideband suppressed carrier modulation containing left minus right audio data. When demodulated using a 19 kHz pilot carrier and combined -- one obtains a left channel and a separate right channel - stereo.

Some FM stations also send another subcarrier higher up which contains SCA -- a store cast music srvice.

So subcarriers can be used to transmit a second data signal. Two demodulators are required -- one for the main signal -- another for the secondary.

Sometimes called multiplexing.

Whether it makes sense or not is besides the point. The facts are:
The FCC requires it.
It is the only game in town.
Get with it, study, pass the test and WIN!!
Whine, rationalize, attack everybody and everything and LOSE!!

Amor..
Think you should do a little research before you go off the
deep end. The ARRL DID take a survey and the majority
supports CW....
Its not the old guard you need to worry about, MOST
of us young guys support CW and we'll be around
for a LONG TIME....
Abolishing the CW requirement is NOT the right thing to do.

For the same reason that blue is not everyone's favorite
color, Tim. One person's facinating activity is another's
deadly bore. Many see Morse more as the latter than the
former. Some see it as you do. Others see it as an
anachronistic, slow, and tedious way to communicate.
Neither side is "right." But perhaps forcing everyone to
learn it exacts a higher price that we realize: by deterring
many newcomers from joining our hobby, which is itself
starved for new blood on the HF side.

Apparently, Masa is, as usual, clueless, and misses the point. To state the point, Masa... Anyone in Canada (licensed or not) may participate in the operation of an amateur radio station under the proper supervision. You quoted it yourself in your reply... Is this plain enough, Masa or does someone have to draw you pictures?
Basically, the same rule applies in the U.S

.

You are an annoyance.

I do not agree with much of Walt's opinions, but his manner is of a polite and considerate person. (Banter and wind ups excepted, but MOST of us are mature enough to recognise these.) There is certainly no call for you to attack him in the way that you do; No one here is in any doubt that it was not Walt who initiated the grossly offensive remarks about gypsies, Jews and the Nazis.

In reviewing Masa's web page (again), I see that after confronted with the correct power levels for the U.S. Technician and Technician Plus above 30 MHz, Masa seems unable or unwilling to correct his errors. He also has the frequency allocations incorrect for the 1.3 meter and 70 cm bands in the U.S.. The more I review his web site, the more Masa's credibility slips. Can one reasonably assume that if Masa is posting incorrect information at his web site (and apparently seems unwilling or unable to correct the errors after being provided with correct information) that much of the information he posts on the newsgroups can be correct?

MASA, AGAIN I ASK THAT YOU RESEARCH AND CORRECT THE INFORMATION ON YOUR WEB SITE.

If the temp is really controlled good, then I would check the power
supply voltages and make sure the regulators are working properly..
also check the regulators on the TX board.....
And maybe change the xtal out......

Other than that, look for a bad cap and I bet the temp control could
use some help!

And did you notice that (according to his web page)
"No Station Equipment License is required to operate."
in either Canada or the US?

I wish I'd known this before; I wouldn't have wasted all that money over
a quarter century renewing my station license each year.

Furthermore, isn't that statement false in the US (apart from the obvious
misinformation)? Here in Canada, when we pass the test we get a
certificate of proficiency, which is good forever. The only way it
becomes useless is if it is revoked. If you want to operate your own
station, you need a station license, which is renewable each April.
If you don't renew, you may lose your callsign, but you can get a new
station license by simply filling out a form and sending in the money.

But, unlsess it's changed, in the US I thought you passed a test
and then received a license which carried your callsign. If you didn't
renew, you had to take the test again?

Michael

07| 100 | G G F F 50 00 50|2 10|NV NV LO|

Explanatory Notes for the Above Table

This table shows the predictions for most of the critical parameters, in

terse format. First column is the date. Second column is the predicted solar flux for the next 10 days. Third through sixth columns represent predicted HF radio propagation conditions for the LOw, MIddle, HIgh, and POlar latitude paths, where BO represents BlackOut conditions (essentially useless propagation), VP represents Very Poor conditions, P represents Poor conditions, F means Fair conditions, G is Good (normal) propagation, and VG is Very Good conditions. The seventh column shows the probability of daylit circuits being affected by flare-induced short wave fadeouts. The eigth column shows the predicted global MUF level as a percentage above or below expected normal levels (ex. +10 means the MUF on that date could be 10 percent ABOVE-NORMAL, whereas a 00 means the MUF should remain at normal levels). The ninth column is the confidence that the forecasts for the given date are accurate (100 means the forecasts will be 100 percent accurate, and 50 means there is a 50 percent chance the forecast will be accurate). The tenth column shows the predicted peak planetary geomagnetic K-index for the given day. The eleventh column shows the predicted 24-hour planetary geomagnetic A-index. And the twelfth through fourteenth columns predict the level of auroral activity that will be visible from the LOw, MIddle and HIgh latitude regions, where NV means Not Visible, LO means LOw levels of auroral activity may be visible, MO means MOderate intensity auroral activity may be visible, and HI means HIgh levels of auroral activity may be possible to observe.

```

CONFIDENCE LEVEL: 40%

DISCUSSION:

This forecast is heavily dependent upon a transient-event forecast, which attempts to predict days which may produce coronal mass ejection disturbances that impact the Earth. At the present time, the following week could see about 3 interplanetary impacts from flare-associated coronal mass ejections. The primary solar region responsible will be Region 8113. The very limited amount of time this region has been on the visible solar disk, combined with what little information has been discerned through optical and

magnetic imaging, is resulting in an abnormally low confidence level for this forecast. The days of peak activity could differ substantially, as could the peak amplitude of geomagnetic activity. Users of this forecast should be aware of these limitations. Next week's forecast should be more accurate, since it will be based upon much more information and a longer-period of analysis of active solar Region 8113.

In very terse terms, expect the coming 10-days to be chaotic and unsettled, with potentially several minor to major interplanetary impacts from flare-associated coronal mass ejections, beginning as early as 30 November or 01 December.

How many more years will it be before testing is droppedby the FCC?? How long after
the ITU treaty is modified
to something like that which the FASC is proposing -- which
now will not be considered until at least 2001??

Try listening to the HF bands this weekend, CW portions. You
will be amazed by the amount of CW activity -- world wide,
entirely recreational, of course.

Er not to pick nits...BUT...

On the FM band in the US, 100 mw out would NOT be legal...

AND, if you're talking about the FM-10, it is a myth that it puts out 100 mw (they're AM transmitter may, however)...the FM-10 and FM-10a only put out about 8-10 mw in stock configuration. Although, with a few simple mods invented by squest it is possible, with the stock transistor, to get 200-250 mw out of an FM-10. Technically, the part is rated at 250 mw but if you want to do that mod, you want to drop a little top hat heatsink on top. =-)

Oh yeah, although I'm not directly responding to you here...in it's stock configuration the FM-10 can cover much more than 300 feet with a well designed and properly located antenna. =-)

Here we have a jammer, attempting to recruit innocent hams to join him in his jamming. Luckily, most amateurs are decent enough to be repelled by the obscenities, noise-making, and music-playing engaged in by KK7HO and his comperes on 3950.

One may, of course, agree or disagree with some of the legitimate 3950 participants who take the radical view that White people have rights that ought to be respected; but, whatever one's personal opinions on that matter, we must all agree, I think, that jamming and intentional interference are not only illegal, but ungentlemanly and un-American as well.

As for the "validity" of the information at the urls posted above; I can only state that one is from a leftist who assumes that any statement by Whites in favor of their own survival constitutes "hate"; one is from one of the jammers himself; and another is from a low-IQ individual, probably "well-meaning," who does not know the difference between "parody" and "parity" and who declares his page to be the latter.

By the way, there is no such word as "supremist."

Here is a brief cast of characters, described by the semi-literate KK7HO as "GOOD Amatuer Radio Operators" (sic):

WA9KJI: A silly mediocrity who has distinguished himself for the last five years by his playing of jamming tapes for hours or even days on end. Proudly admits that he plays jamming tapes and attempts to disrupt existing QSOs. If someone this ignorant can be so described, KJI is politically motivated: he claims that some 3950 participants doubt, as he puts it, "the holy-caust." Thus, he feels truly righteous as he jams the

"evil ones." Conventional-minded almost to the point of catatonia, he seems to be motivated by a hatred of anyone who can think for himself or who doubts what the media are telling him. In jamming, David has found his "mission in life."

W5VVI: Another mediocrity who aids WA9KJI in his jamming efforts, but so phlegmatic that he is hardly a factor.

K5BLB: Plays jamming music for hours on end; refers to all his imagined enemies (often stations he has never heard before, who just happen to be in his way, or who are talking to someone with whom he disapproves) as "faggots," "crotch-lickers," and worse. Hardly a sentence comes out of BLB's mouth that does not contain an obscenity. He openly boasts of his jamming and music-playing activities, and gives his callsign while doing so. Strangely, K5BLB is a crude and ignorant race-baiter, despised by rational White people because of the way in which he fits the media stereotype of the "hater" -- but, because he causes chaos on 3950, he is aided and encouraged by leftists who want the intelligent patriotic discussions on 3950 to stop. BLB himself is a self-inflated egotist, and his motivations are to attack and jam anyone who doesn't defer to him and allow him to "hold court" on 3950 as the "big man" on frequency.

KK7HO: A semi-literate person who aids K5BLB in his jamming efforts; politically motivated.

N5OUG: A low-IQ individual who has been deluded into aiding K5BLB, et al.

N5HDQ: A low-IQ individual who has been deluded into aiding K5BLB, et al.

K1GKM: A low-IQ individual who has been deluded into aiding K5BLB, et al.

WB0CXJ: A low-IQ individual who has been deluded into aiding K5BLB et al. He also admits playing music and other jamming tapes, usually in conjunction with K5BLB.

K5ZU: A seriously deranged psychotic who probably would jam anyone with his interminable stream-of-consciousness ravings. Has been "befriended" by the other jammers -- again, because of the chaos he causes. He does turn on them occasionally, however.

W9GU: A very strange individual who, for some reason or other, has the time and resources to send expensive equipment, including tubes and transmitting components and the latest accessories -- absolutely free of charge -- to numerous jammers on 3950, and who also sometimes delivers these in person -- travelling halfway across the continent, in some cases, to meet or recruit amateurs for his jamming efforts. Has also coached some of the other jammers on technique -- possibly a quid pro quo for accepting the free gear. One can only imagine what his motivations and funding sources are.

For those of you who want to hear or join in the discussions that have caused such furious jamming efforts, I can only say this:

1) The jamming is sometimes absent, be patient and a good night will come.

2) The legitimate operators sometimes move to 3947, 3947.5, 3953, or 3955. Later, in the Winter, some will migrate to the vicinity of 1877 on 160 meters. I myself advocate occasional operation in the advanced band around 3812 - 3817.

3) All of us should reflect on the jammers' motivations. They are similar, I am sure, to those of other radio jammers in modern times, such as Mao, Stalin, Castro, et cetera. If the jammed signals were stating things that were ridiculous or untrue, no one would bother to jam them.

Think about it.

With good wishes to all,

Kevin, WB4AIO.

More problems doing basic math, Jeff?

If your figure were correct, then there would only be one lawbreaker
per 10,000,000 amateurs. And since worldwide there are less than
10,000,000 amateurs, there must not even be one. But a few minutes
spinning the dial turns up many many more than one on 75m alone.
On a typical evening listening to 75m, I'd estimate that closer to 1/3
of total operations heard are of the sort which have been called a
"cesspool". Of course not every amateur operates 75m, but there
are certainly more than one in ten million who do. (It often sounds
worse than the 10 million who do operate CB. Aside from the
country music and occasional road rage you hear on ch 19, most
of CB is just dull, not grossly vulgar.)

This situation is very ugly, and it has definitely gotten much worse
since the FCC has virtually abandoned enforcement. And even
among those who stay within the letter of the law, finding those
who are always "ladies and gentlemen" is becoming more and
more a matter of locating a needle in a haystack.

Now 20m has fewer of the cesspool operators than 75m, but
it certainly doesn't have more "ladies and gentlemen". The
amount of rude operating practice heard daily on 20m is also
appalling. And every one is Morse speed tested. Some of
the rudest boast Extra calls, and usually W#XXX or WA#XXX
calls at that (original not vanity).

And certainly those who send the endless strings of dits over
digital operations are Morse operators. And likely those who
swish carriers back and forth are too. You do hear less cussin'
by Morse operators, probably because by the time they spell it

out it loses its emotional impact, but the strings of dits and swishing carriers appear to be a substitute.

Digital operators are usually pretty clean, but some RTTY operators can get pretty coarse too. And SSTV, oh my, some of the things they send are banned in Boston. The social climate has changed. And what you hear on amateur radio reflects that coarsening of the social fabric.

I have a theory about why that is. I think that our society has become so risk averse that people rebel against the smothering protectionism in taboo breaking ways. It brings a little risk and excitment back into their lives. Or it could be that they're just knuckle dragging morons who found they had a knack for beeping at 13 per or better. For sure it isn't the Ozzie and Harriet world you'd have us believe it is.

Dear Al --

I agree that the chaos and bad language/jamming is thick at times on
3950. But the things you are complaining of are mainly the actions of
those trying to _jam_ the net -- not the net itself.

With all good wishes,

Kevin, WB4AIO.

>IMO, this sort of childish behavior with the web pages and all the
>threats you hear on 3901 and elsewhere reflects the continued "dumbing
>down of America".

On the contrary, it reflects the marginal smartening up of America. We now have knuckle dragging morons who can marginally read and write and operate technical equipment where in the past they wouldn't have been taught the skills to do so. They'd have been quietly told to drop out of school and get a manual trades job. But today, ways are found to push them all the way to college, and they wind up on the net or on the air, still without a social conscience or the ability to hold onto a rational thought.

The top 10% is scoring better than the top 10% did 20 years ago. America isn't dumber. But now the average is diluted by the inclusion of the dregs who wouldn't have even been counted before. In addition, the asylums have been emptied, their occupants mainstreamed, and our jails have revolving doors. America isn't dumber, but the dumbest and least socially adapted now have a showcase which they didn't have in the past.

Well Burt, at least you are improving in some areas. I am happy to note that you did NOT come back with a "typical ham" response regarding that sorry excuse for a human. Notice I did not include his quote. They do not bear repeating. If a person can not debate the issues with you, or at least be non profane with their insults, they should not bother as they have blown their credibility already. BTW, for what its worth, I have also noticed that you have not been posting any of the "all hams" postings lately. Curious whether you have just given up on all hams or if you are ready to do your part and try to improve things?

Burt, Burt, Burt, we have had this discussion before. Remember when a Marine who was a ham took issue to the "no guts" argument? Can't you at least go back to the "typical ham" argument? "No ham"? Well Burt, I am not a marine, but with 9 years in the Army and 2 years in the National Guard (5 years infantry), 5 years as a firefighter, 8 years as an Air Force officer, I have been accused of many things, but NOT of having no guts. I have faced you up front, without profanity or even rancor, and even when I have attempted to insult you have done so with tongue in cheek, and would be willing to say anything I have said here to your face. Gee, your last message was NOT even addressed to me so why should I take offense? Because I AM A HAM, and proud of it! You need to stop confusing HAMS and LIDS.

The continuing neglect of cross-eyed Suzy Grims kids are detailed on my page
at http://www.mindspring.com/scorpio117/
I really feel sorry for those two kids.

Rich is a fat slob,he would make a large lampshade. Since I have never heard you identify on 75,I will logically assume you are one of the qrm'ers.
Thanks for keeping this thread going,it really plugs the webpage.

Interesting. Out of thousands of possible frequencies you found
improprieties on 3 or 4. And yet people are using this to say that an
entire spectrum is bad. I wonder if there are 4 or less repeaters in
the world with this kind of behavior? BTW I am NOT condoning such
behavior. I would be VERY happy to see such people lose their
licenses and do jail time. My point is that many here just love to
judge an entire spectrum by the behavior of a few. If you want to
argue against code, do so intelligently and by discussing the futility
of it, NOT by trying to badmouth a few on the other side. My point,
of course, also applies to the pro-code side :>.

Oris you really should try to identify on your posts. Do you feel guilty sitting on your rear all day while cross-eyed Suzy goes to work every day? Do you feel guilty spending Suzy's money on computer parts and cheap ham gear while your kids do without? What about your multiple criminal convictions Oris?

From Donna KF4GPJ:
Suzy , How does it feel to go to work and make the money , while the moron husband sits on his rear end.??? He has commented several times he doesnt know what the kids would do if anything happened to him ..He said you dont have the first idea of how to take care of them...He supposedly cooks , cleans .does the laundry...gets them ready for school.. Well if this is true , good he's laying on his rear end all day,he should do something. At least one person in the family works!!!!!!Is that why ga has dfacs to make sure kids are'nt doing with out ???RIGHT!!!!!Get rid of the dead beat now before your kids suffer more...congratulaions on putting up with such a moron....

The previous post made by N3CND,a felon,child neglector,hf qrm'er.He is one of the main goons sent by the Intercon Net to destroy communications on hf. WB2OTK' bad check warrants are PENDING,he skipped out on them. KK4ME is a child molester,proof of that will be posted soon. Oris's page is carried by negia.net in Athens Georgia. Send complaints about his page and the posts by Susan10, wpe73xy to support@negia.net

Notice O'brien never refutes the above figures and
facts. He just rants and raves.

Bottom line: O'brien does not now or will he EVER
receive retired pay from the U.S. Navy. It is not
paid to convicted felons. Anyway, as noted above, he
would have had to join the navy a eleven years old to
be eligible, which he is not.
Nice try O'brien! Just another one of your BIG LIES.
Retired navy pay, what a joke!

Doesn't sound like a morse operator. Sounds like someone who happens
to have their HF rig's "CW" button pushed. Two different things.

>And likely those who swish carriers back and forth are too.

I wonder how one tells if an operator is a "morse operator" by a
swishing carrier. Do morse operators have different-sounding
swishing carriers than others?

>You do hear less cussin'
>by Morse operators, probably because by the time they spell it

But I know what I'm talking about. I took the test in May of 1972, and passed all of it but the code receiving test. Passed that the next month, and applied and received my station license in July of 1972. I've held this call all these years. I can join the Quarter Century Wireless Association, my hair is starting to turn gray, and it occurs to me that I may have gotten my license before you were even born.

The problem that is going on here is that you are picking on little points, which may not be important, without really understanding them.

A while back, you posted about power levels in Canada vs the US. I think many of us thought, "what's the point". It certainly seemed that if you actually understood it, it wouldn't have been worth a post. You compared two different means of measuring power, which makes it look like there's a big difference, and what little difference there actually is would be unimportant if you understood things like decibels.

Then when someone asked about license free operation in the low frequency spectrum, you looked it up in some Canadian government document, and thus assumed there was no such thing in the US. I may have been wrong about things in Canada (I noticed something that indicated that now there may be such a band here), but I knew back in 1972 that there was a license free band in the US.

You are the one who suddenly thinks he's found a way of operating HF without passing the code test, by "operating" under the supervisiion of someone who has got the privilege of doing so.

You are reading the rules, but not understanding them. I "operated" in early 1972, when I rang the doorbell of someone two streets over who had a big antenna on his roof. He let me talk into the microphone to someone at the other end. I know I didn't tune the transmitter, though I can't remember whether I pressed the PTT switch. There was a great article in QST the year before entitled "FB Claude" which was pretty much the same scenario, though set in the thirties.

I also "operated" in Field Day that year. I didn't have a license. I'd just passed the code test a few days before, and had passed the rest of the tests the month before. I don't believe that I had yet received my certificate of proficiency.

But after I got my call, I never operated voice on HF. To do so would have been a step down, to revert to the days before I had passed the tests and gotten my license, to being a mere visitor who cannot be in control of the station.

That's the point. The rules allow for us to pass messages for other people, just as long as they are not commercial in nature. It's called third party traffic. Phone patches are similar, though they are talking directly, rather than giving us a written message to pass on. If someone who hasn't got a license actually visits a ham and asks to talk to someone over the radio, it's the same thing.

In none of these cases are the third party in control of the station.

If someone who has a license visits another ham who has more privileges, such as HF voice, they can do the very same thing that those unlicensed visitors can do, which is talk on the radio. But just like those unlicensed visitor, the ham gives up the right to control the station under those circumstances.

Since you don't understand this, even after others stating otherwise, it is extremely easy to take the "No Station Equipment License is required to operate." as another case of your misunderstanding. Indeed, it looked to me like a variation on your comments about gaining privileges by visiting a ham with greater privileges.

If you don't want people to misunderstand what you are saying, you can't rely on single line explanations. If someone is familiar with the licensing structure in Japan, like someone who is licensed there, then they might look at that page of yours and think "Wow, they don't need a 'Station Equipment License'in Canada?". But those of us from North America (and face it, these rec.radio.amateur. newsgroups are dominated by North Americans) look at things from the point of not needing such a thing, and don't understand the reference.

But in fact, misunderstandings such as this seem to stem from your
reading the rules and not understanding them, rather than the rest of
us being clueless.

Get a load of this one folks. Last night at around 11:30pm
Jimmy talks to Norm, KQ4OA and tells him, "Yeah, I done
it, I done drugs due to my PTSD."
(PTSD - Post Traumatic Stress Disorder)

Ha, Ha, Ha, Ha, Ha, You have more denial than I thought
O'brien. First it's navy retired pay, then the Intercon Net
made you do drugs, and NOW PTSD! Ha, Ha, Ha, Ha,

Next you'll be telling us you were in combat in Viet Nam.
You are a compulsive liar O'brien !

You were born in 1962 O'brien, you do not draw navy
retired pay and you never fought in any war, you are
a fraud who violated the Georgia Controled Substance Act,
Three Counts.

The criminal records and court documents of
James Vincent O'brien III, KD4CDB, may be viewed

> the rig?????

Hi !

I am using this rig since abt 2 1/2 years with a 'horizontal' 11-ele
yagi on 144 and a 19 ele 'vertical' yagi on 440, have a duo-band GP
for both bands as well, no preamplifiers used.
I do FM, SSB and CW on 144, FM on 440 from urban area.

I enjoy the good receiption on all those modes, i rarely have problems
caused by 'overloading' the front end. I do not have optional filters
within the unit since i use an external DSP unit on SSB and CW.

I do not like the 'high/Low' swith to adjust the power, i d rather
have something more adjustable, anyway fine adjustment of those two
choices can be done inside the rig.

Most goodies like CTCSS, internal keyer etc. are optional, for full
cross-band repeat operation the radio needs modification.

I did not have any major problems with the IC 820H yet...

3880. Guglielmo Marconi Centenary 6 Dec 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-29 00:00:00 UTC
From: eric@parkland.nospam.demon.co.uk
Message-ID: <19971129.091854.00@parkland.demon.co.uk>
Source record: 185605
Cross-posted to: rec.radio.amateur.misc,solent.events,uk.radio.amateur,solent.general

On 6th December 1897 the 'Worlds First Permanent Wireless Station'
started transmission. It was built by Marconi.
It was located in the grounds of the Needles Hotel, Alum Bay,
Isle of Wight, UK, approx 50d44m N, 1d19m W, IO90FQ, SZ307854.
It first transmitted to a tug in Alum bay, then to a fixed receiver
at Madeira House, South Cliff, Bournemouth.
The transmitter was a spark-gap in the secondary circuit of an
induction coil, connected directly to vertical aerial 120 ft high.
To celebrate this centenary, the Amateur radio section of the
SPR & Isle of Wight Community Club (GX3IW) will be operating from
Northwood Primary School (50d40m N, 1d34m W, IO90IR, SZ485932)
on 6th December 1997 from 09:30 to 17:00 utc.
The callsign used will be GB4JAM, and operation will be on HF and 2m.
(The JAM in the callsign refers to Jameson, Marconi's mothers family name)
Visitors are welcome, and there may be oportunities to send greetings over
the air to other amateur stations (subject to licence conditions).
QSL route is via RSGB bureau or direct to G3XZR (QTHR).

I have a 97 Mercury Sable and I am looking to install my Alinco DR600 2m/440m mobile rig in it. I am trying to find some other hams who may have installed gear in this vehicle (or a 97 Ford Tarus). Any information on successfuly setups would be helpful. Also information about what kind of antenna setup you have would help as well. I'm looking to do either a trunk mount or glass mount. Not sure which will be the best route. My mobile rig has a remote kit which I am considering as well. I've found that there is not much room for a radio in this car. Well, any help, advice, or comments would be appreciated. Thanks.

The content of your articles match identically to those posted by Drew.
He too gave us daily reports of what what he'd heard (like you, for-
getting that most people reading this NG have receivers of their own).
He too gave the lawbreakers worldwide coverage just as you're doing -
you're acting as a pawn for them in that you're causing their
audience to grow.

Rather than easdropping, why not get a license and join the rest of
us law-abiding hams on the air? Or at least tune down to the lower
50 kHz of each band and listen to the "good guys."

>>Tell me, could operating an HF rig without using CW kill you?

Moot question. The FAA *has* relaxed its eye exam: They've certified
a monocular-visioned pilot. He's been flying UPS planes but now wants
to fly passenger planes. Of course, none of the airlines here will
hire him, so he's filed lawsuits against them. The Civil Liberties
Commission and our state Attorney General support his suit.

(I'm surprised the no-code crowd hasn't resorted to utilizing the
services of the CLC.)

Source record: 185625

>>> (2) NO LICENSEE of an amateur station SHALL permit a
>>> person who does NOT hold a certificate or license
>>> listed in section 42 to operate that station.
>
>

There is a difference between 'participate in the operations' (under supervision) and 'operate' in the Canadian rules. In this reply, Masa fails to mention RIC 25 43(1) which mentions 'participation under the supervision of a licensee'. Masa might explain the difference between the two paragraphs (RIC 25 43(1) and 43(2).

>> Anyone in Canada (licensed or not) may participate in the
>>operation of an amateur radio station under the proper supervision.
>
>then you are suggesting everyone to break the law.

By no means. Masa, suggest you read closely 43 (1) of RIC 25 and explain to us what this means (and how it differs from RIC 25 43 (2)). If no one can 'participate' (under supervision) in the operations of an amateur radio station excepting a licensed amateur (or others mentioned in RIC 25, 42), then why is RIC 25 43(1) in the Canadian rules?

>CANADA's regulation and US's regulation are different from one
>another. It is NOT same.
>
>

On the contrary, they are quite similiar. I assume you have a copy of Part 97. For example, RIC 25 43(1) and Part 97 (97.115(b)(1)) convey the same meaning.

>In Canada, if someone wants operate the amateur station, BASIC
>qualification or equivalent must be OBTAINED. It's clear in the
>regulation. Under the supervision, the BASIC or equivalent
>operators can operate under the supervisor's limit (ie.
>supervisor has morse (HF) = no code operator can use HF under the
>supervision).

Masa may want to explain what he believes 'Any person' means in RIC 25 43(1). Indeed, 'any person' may not 'operate' an amateur radio station in Canada, however, 'any person' may 'participate' in operating an amateur radio station if properly supervised (paraphrased from RIC 25 43(1)). To me (and probably most other folks), 'any person' means anyone, not just licensed amateurs. Masa might want to contact the Department of Communications for clarification of the rules and post the clarification he receives.

Sounds like the conflict here is the words 'operate' and 'participate'.

>you are one of the typical clueless amateurs who don't know anything
>about regulations, but tend to be.
>
>

Not sure what you mean by 'but tend to be'... I have a copy of both RIC 25 and Part 97. Trust you have the same. I quote from RIC 25, 43 (1) and 43 (2). Another point, assuming you have a copy of Part 97, why are both the power levels for the U.S. Technician and Technician Plus classes incorrect for frequencies above 30 MHz and the frequency allocations for the U.S. 1.3 meter and 70 cm bands listed incorrectly at your web site? Here is a case of having been informed (on the power levels) and not correcting them.

>Please clarify. I posted about this, but I got no answer.
>
>

Indeed you did (and you acknowledged it). More than a month ago, in a reply to one of your posts, I suggested you visit the ARRL web site (http://www.arrl.org) to research the subject of power levels. Nearly a month ago, (in the posting; 'New flash for Masa (aka Troublemaker), I posted the correct power levels and you responded to the post 'ok'. No need to repeat myself in this reply. Again, suggest you visit the ARRL web site and research the subject.

>please identify which site contains 100% info correct.

First of all Crosseyed Suzy I was never in VR46,I was in NORA 1567. I was honorably discharged for the second time in 1993 and currently receive a Navy retirement check every month. YOU,on the other hand,care more about that sleaze Oris Grim than you do about your own children,who repeatedly do without so that lazy,non-working Oris can sit on his rear and qrm hf all day and night. Instead of worrying about my past how about taking care of your kids. Your continued neglect is being observed by defacs and very likely will result in them being placed in a foster home if you do not wise up. And continued harassment by your moronic husband will get him locked up AGAIN as well. I will try to fit Oris's convictions on my page soon,there are twelve of them. Now go give your poor kids some cold macaroni and cheese while you buy Oris more amplification equipment to qrm hf...

Actually,most of the net lives above the mason-dixon line. There is a right to free speech in this country last time I checked...If you don't like it turn it off,the Net will do fine without your voyeuristic "participation".

OK! but only if he promises to post Bhutan's and Lichtenstein's. These world leaders should not be overlooked!

Perhaps this would stimulate further discussion of this important subject.

Just because you disagree with their opinion does not give you the right to jam the frequency when they are using it. The list of hams that you give are a who's who of hams that malisciously interfere with 3950. Inviting other hams to jam this net leaves you wide open to any violations your group commits on this frequency. Orginizational jamming of any hf frequency is a far more serious problem than the members of the liberty net expressing their opinion. I suggest you and your qrm'ing comrades brush up on the Bill of Rights and the entire US Constitution. The only thing exposed here is the wanton and willfull interference your listed group is doing to the net.

Hi. My name is TRouBLe MaKer. I have a ham and scanner related web site. Now, it is very easy to navigate (frames installed) !!

The contents are as follows:

- What's new ? (IC Canada Update etc., link to IC Canada's web site)

- Montreal Area Repeater Directory (including hidden illegal repeaters.) There is also a link to a page where you see all VE2 and VA2 (the province of Quebec) repeaters.

- Amateur Radio Basic Qualification Study Guide (online full version)

- General Information Sheet for Amateurs and Pros

- Amateur Radio Freqs and Countries concerned

- US Amateur Radio Exam Page

- Ham frequencies and British Columbia Frequencies

- Ham calling frequencies

- Ham license structure worldwide (Canada, US, Japan, Australia, New Zealand... and there are links that help you to obtain the Australian and New Zealanders license while you stay there !!)

- US Frequency Band Allocations (for each license)

- Amateur Radio Satellite Frequencies

- Space Station MIR Information Centre

- Amateur Radio Station Prefixes

- Royal Canadian Mounted POLICE 10 codes & International Q code list

- International Morse Code

- CB Information Desk

- International Air & Marine Frequencies

- Propagation General Information Centre

- HF Propagation PREDICTION online

- RS Scanner Info

- ADI's AT-600 Dual Band Information

- Cellular Phone Listening Centre (Cordless Phone will be
added soon !!)

- Radio Modification Centre

- VE7JPN & VA2QRU Station Equipments

It's at

http://www.radiotelephone.net/amateur/

See you there !!

Look moron I never said anything about cleaning up ham radio. I just stand up against maliscious interference. And you can check every post I have ever made to the newsgroups,none of them ever had the childish cuss words you used in your last post. I f you want to change radio you can start by cleaning up your own text. Maybe you should pull your finger out of your nose and stick it in your mouth.

David Stockton <david_stockton@hp.com> wrote:

>I agree that much of the activity on the bands is now
>non-radio-related natter. Interests seem to have changed over the years.
>I suspect that one of the major causes may be the availability of
>affordable store-bought radios.

Absolutely. Of course, there were commercially-available radios 20
years ago, and maybe even a majority of hams used them. However, most
of the amateurs at the time came from the "old school" where you usually
had to build your own radios to get on the air. Thus, it wouldn't be
unusual to see a "commercial" radio in some old-timers' shack, even
though the old timer built his own gear at one point or another.

Today's amateur-radio introduction is much different. Want to become
a ham? No problem. Just run down to the local radio shack and pick up
a copy of Gordon West's exact-questions-and-answers memorization guide.
Once you've studied it enough to be familiar with enough material to
pass, take and get your license. Wait a week, and then get your callsign
over the Internet. In the interim, pick up the phone and order your
"shack on a belt". Once you get your call, you're ready to roll.

No need to learn electronics theory. No need to become acquainted with
the world of amateur radio via an elmer. Just get on the radio and talk
because, after all, that is what amateur radio is all about today.

-
Here is a summary of news items covered on edition #244 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 5-Dec:
-
1. TAPR Offers Latest Revision of the AX.25 Packet Protocol
2. KC4HAZ Busted by Federal Marshalls for Pirate Broadcasting
3. Mir Begins 144/430 MHz Crossband Experiment
4. AMSAT Adds New Face to News Service Editorial Staff
5. RAC Board Elects 1998-99 Executive Team
6. Sputnik 40 Continues to be Heard, Acknowledged in Press
7. Weekly Propagation Forecast
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Special Event Station Calendar
10. "This Week" Staff and Affiliates to Operate W2T Next Year
11. DOVE-OSCAR-17 QSL Card Now Being Made Available
12. "The RAIN Dial-up" from Chicago
13. Lucent Technologies Unveils Smaller and Faster Transistors
14. IBM Develops New Weather Forecasting System
15. FCC to Review Rules and Regulations for Common Carriers
16. Larry Ferrari, WA2MKI, SK, Noted Philadelphia TV Organist
17. "Ancient Amateur Archives" with Bill Continelli, W2XOY
-
Funding for the program's transmission and production expense was
provided this week by a grant from Jack Halem, KA6DLX, of
Willits Ridge, California, where "This Week in Amateur Radio" is
heard Wednesdays at 7:30 PM in San Bernardino, Riverside, and
Orange Counties on the KA6DLX repeaters on 146.265/446.475 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
```

satellite uplink.
-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

>My web page correct states "STATION EQUIPMENT" license, not the
>STATION license.
>
>

Humm, just looked at the JARL web site and there seems to be no mention 'station equipment licenses', only 'station licenses'. I'm sure though, as with the ARRL and RAC sites, it is riddled with errors and, of course Masa is right.

Masa is correct on one point. Japan does require a licensing of equipment (listed on the station license), whereas the U.S. and Canada do not on their station licenses.

I would guess that many on these 75m frequencies are NOT licensed...and many of those who are should have had their licenses revoked long ago. Your buddy Rich, for example.

Hey Jeff....it is Drew. He's just moved to some dink water radio station
in backwater Kansas and is trying to create trouble all over again. The
same CB Rambo bozo appears in the CB and scanner newsgroups and is just
as obnoxious as ever. It stems from the fact he was looking for free
antennas for his new digs and had the gall to approach the very groups he
spent insulting. Since he was summarily ignored, he decided to create
this new alter ego

Thanks for reading,

I am a weather buff. I am interested in setting up a home weather station to have several of the benefits from the info that would be provided. The anemometer would be very valuable because of the wind speed and direction in relation to my antenna array, ie: which direction to leave my beam pointed when wind speed exceed 35mph. Rainfall, temperature, and barometric pressure are always nice because of the forecasting insight they give. Lastly I'm tremendously curious regarding weather data.

Well this my dilemma, I was all set to purchase a Peet Bros. Ultimeter 2000 when it came to my attention that an amateur in the Atlanta area who is primarily a DXer, as I am, bought and setup the Ultimeter 2000 in his shack and little did he know that the CPU gave off a S9+ noise level on the 20M band. After working with Peet Bros. for a couple weeks or so the problem could not be resolved. So this is my question, currently is there any amateur ops out there that use Davis or any other reasonably priced weather station that does not have this problem when setup in your shack.

Tell me what's wrong with this picture.

The BARF tries to smear WB2OTK with illegally obtained
business documents, which they further alter to fit their
purposes. And what is WB2OTK's supposed great crimes?
A 15 year old check, which the BARF cannot produce, that
was written for $12. An old mortgage note, highly altered,
which means nothing to anyone who understands the
mortgage business.

NOW, let's look at the BARF. It is headed up by the three
time convicted felon, Herbert L. Schoenbohm, KV4FZ, who
was found guilty of three Telecommunications felonies.
Moreover, the FCC is currently in the process of revoking his
ham radio license. But does Schoenbohm show any
remorse? No, he runs a web page which advocates how
to evade paying U.S. Federal Income Tax. And they say
WB2OTK has financial problems? Well Schoenbohm
just declared bankruptcy!

Now, the BARF takes all this supposed hot information on
WB2OTK and what do they do with it? They give it to the
operator of a web page, James Vincent O'brien III,
KD4CDB, to post. And who is this web page operator?
He is James Vincent O'brien III, found guilty on June 16, 1993
of three counts of the Georgia Controlled Substance Act,
Georgia Code 16-13-30, in the Superior Court of the
County of Paulding in the State of Georgia. Subsequently
sentenced to prison and paroled on January 14, 1994.
Case # 93-CR-000158, State Prosecutor was Mike
Deavers & O'brien's attorney was Randall G. Williams.
Bondsman was Gregory Graham. O'brien was held on
a $10,000 bond.
O'brien's criminal record & documents may be
viewed at: http://www.dirtball.com/jimmy.html

So, you tell me, what's wrong with this whole picture?

73 & Happy Holidays,

WPE73XY

I went from 0 to 15 wpm in 3 months. I got NuMorse which is a morse code drill program and set it at 15 wpm with the spacing between letters of 15 wpm (full speed). The goal is that by the end of learning all the letters you sit down and take the test. I practiced 15 to 30 minutes a night 7 nights a week for 3 months. I was licenced as a tech in 1978 and never upgraded because of the need to pass 13wpm. I always kept my licence but was not active until the past year. I am 34 and still dislike the code but now I got my Advanced ticket. All it takes is dedication and a small investment of time and patience. You can do it!

Whoa, slow down Jimmy. We gotta check some
figures here. You state that you were discharged
in 1993? Was that just prior to your drug conviction
in February 1993 or what? Or was it just prior to
you leaving for prison in June 1993? Cum on,
what is it?
Now you say you get a retirement check? Hmmmm, I
called Atlanta Naval Air Station. They said Naval
reservists get retirement checks at age 60 AND
based on 20 years on Naval Reserve service.
Hmmmm, Jimmy, according to the SAM data base,
your year of birth is 1962, that makes you 35 years
old, so you were "discharged" at 31 years of Age?
Wow, that means you had to join the Naval Reserve
at ELVEN years old! Wow Jimmy! Was that the
Reserves or Sea Scouts. Sorry Jimmy!
Zappppppppp! YOU LIED!
You don't get any retirement pay and you never retired
from the naval reserve.

Say, how many cigarettes a week did they allow you
in the Paulding Countly Jail Jimmy?

> First of all Crosseyed Suzy I was never in VR46,I was in NORA 1567. I

Wondering if these old duffers even have computers and/or Internet access. I hear them, specifically Pork Butt and Big Al, always talkning about the Internet and "getting my e-mail", but I never see any of them on here. Makes me think these old farts probably don't even know how to use a computer, much less access Usenet.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

yeah, the majority is against morse code. the small number of old foggies (who, of course are in control of the regulation) are becoming silent keys. wait 5 years and it will change.

Age and treachery wins over youth and skill ... remember Arthur Ashe versus Jimmy Connors! :-)

Get the tapes that send the code at 20wpm and that space the characters for 5wpm. Your brain will capture the sounds just fine.

Put them in your car and listen 'til it hurts!

Worked for me at age 37.

Hi there,

I have a Ranger Communications RCI-6030 VHF-Marine rig which I want to trade for a scanner. The RCI-6030 has the following features: All USA and International channels (156-162 MHz), all 10 NOAA weather channels, 25 watts output power (full legal power), 1 watt low power, Dual Channel Watch, Instant Channel 16, Digital PLL tuning, backlit LCD display, "water tight" casing, and more. Comes with the microphone (with channel control on mic). Very good condition. This is a current production unit, not discontinued. I am looking for a portable or base/mobile scanner (preferably portable) which covers 800 MHz (not nessesarly gapless 800 MHz), and preferably also the VHF Air Band (118-136 MHz). Any number of channels will do. Anything in good condition will also do. Please email me if you have any offer. I am in the Philadelphia, PA area. Thanks.

73's,
N3ZVM <--------Ham Radio Callsign

I picked this up from Packet...

Hello from KC7NKS.
I have opened both my Alinco radios, a DJ-S11 and DJ-S41t.
The modifications allow them to:

DJ-S11:
RX- 136 to 174mhz.
TX- 136 to 148.61mhz.

DJ-S41T:
RX- 400 to 499mhz.
TX- 424 to 476mhz.
==========
THINGS NEEDED:
Small phillips screw driver.

Small soldering iron.
A steady hand.
==========
The modifications are:
1. Write down all memory channels.
2. Remove batteries, leave battery cover off.
3. Take out the (7) small phillips screws on the back of the radio.
4. Remove back cover.
5. To the left side of the speaker next to the side of the case
you will see a very small green resistor (about the size of a
flea) YOU MUST REMOVE THIS RESISTOR.
This resistor is all by itself on the board so there is
little chance of damaging other items.
Using the small soldering iron hold this against the resistor
until you see the solder melt then flick the resistor off
the board with the soldering iron.
6. Reassemble the radio.
7. The book says to reset your memory but several of my friends
have not and their radios work fine.
8. THATS IT YOU ARE DONE.

Good Luck and Enjoy!
73's KC7NKS Dale

Define "loss". Does loss mean
1) nobody will use CW any more?
2) most people won't use CW any more?
3) CW will cease to be a requirement for amateur radio?

I'd say 2 is already true. 3 is pretty likely. 1 is very unlikely.

>Is CW becoming a dinosaur, driven to near extinction by the very
>technologies it spawned? Will it continue to exist only through the

Yes. Except of course, it already IS a dinosaur. Mind you, dinosaurs can
be pretty cool.

>> e-mail address is: info@aor.co.uk

But your message title states that AOR scanners are junk.

But here you are, doing a little research, and locating an
excellent source for parts for 'em.

Why repair a piece of junk?

Or are you merely miffed that you didn't have a parts
depot in your home town? If that's the case, then you
have narrowed the available electronics manufacturers
that YOU would buy from to about ZIP.

I suspect that they don't come here with the sole objective of
living off our social security system, more with the prospect of
just plain living. Any of us in their position, I suspect,
would be doing the same thing, but we have the good fortune to
be born in a richer country with good prospects. These people
did not choose to be born poor in a poor country. You have no
way of telling whether they will contribute to the economy or
not. Many of the people in our National Health Service are
immigrants and contribute a lot to the country, but many of them
have had to suffer racist attacks too.

It makes no difference whether you're talking about Slovaks,
Nigerians, Irish, Italian, or any other race, the comments are
still RACIST. Obviously, the ability to communicate with
others across the world has no effect on broadening
narrow-minded attitudes.

Please note : This message contains no abusive language or
personal attacks. Let's hope Walt can do the same.

Nick.

You might want to "sereously" consider forgetting the whole thing. Mom
and Dad may become "sereously interested" in your activities when the
Federal Marshals knock on the door of the family home intent on
confiscating every piece of electronic apparatus within. You might be
"sereously" in trouble.

Dane, you can remove all the rec.radio.amateur.* groups from your posting.
People on the ham radio newsgroups are more likely to turn you into the
FCC than to help you violate the law.

Spend alot of time listening on the "CB bands?" How mant "citizen band bands"
are there? And ham radio is certainly not dying, its in a growth mode whether I
like it or not. Or you, for that matter. I smell another frustrated ham
wanna-be who wishes it would go away so as to allow himself to stop feeling
inadequate.

The real value of places like 3.950 MHz is that they keep all the flies in one place, picking at the same old carcass. The real damage will be done if someone somehow managed to "clean up" this frequency, and all these psycopaths spread out across the bands.

#->Thank you! I thought I was the only one out here that wasn't wasting
#->votes on the Republicats!

Nope! I'm another one!! I decided to change after this last
presidential election. Between the two that were running,
I took a very, very hard look at who all was running the
store in Congress. Talk about the "Good Ol' Boy Network?"
I'm not liberal, but the Republican party has not only lost
me, but my wife and many friends of mine as well. Someday
the "Blind-Leading-The-Blind" up there will get the picture,
but not until they have either retired or voted out of the
picture. Some days it just gets so frustrating I could almost
scream.

Warm Regards from a new Libertarian!!

Eh??? Wot???

> My initial comments
>to Walt were of a completely polite nature - any nastyness on
>my part only came as a response to abusive language from Walt.

No - I think that you responded badly to a wind-up.

>>There is certainly no call
>>for you to attack him in the way that you do; No one here is in
>>any doubt that it was not Walt who initiated the grossly offensive
>>remarks about gypsies, Jews and the Nazis.
>>
>
>Oh really ? Read it again ! It was Mr Davidson who initiated
>that "discussion" (as John Kirby so rightly indicated) - or is
>your reading ability defective too ?

What was the subject of the other simultaneous posting that you made -
something to do with not being abusive? Now, after YOU invited comment
as to whether others found you to be an annoyance, here you are, being
abusive again!

>I merely pointed out that many 1000's of E European gypsies were
>killed along with Jews in WW2, and racism starts with comments
>like Walt made. You think that it's grossly offensive ?
>I think it's more offensive to forget that it ever happened.
>People who forget history are destined to re-live it.

To suggest as you did, that there is an association between someone's
NON-racist comments and the Nazi party is GROSSLY offensive. It is the
GROSSLY part of this that is unacceptable, for it attacks deeply, and
turns normal people into offended, and perhaps irrational, people. For
this very reason, the GROSSLY aspect is dealt with severely by the law.

In some of your recent postings, you have intimated that you are at least 40 years old. Please behave accordingly.

>You and Walt are perfectly entitled to complain to Demon
>Internet about the content of any of my messages if you wish.

EH???? A bit of a non-sequitur, here.

>However, you will appreciate that I keep a copy of all relevant
>material too, and I may wish to reciprocate.

WHy do you feel the need to indulge in a threatening manner, as well as in an abusive manner?

>Oh yes, very polite & considerate. Or is that what you call
>"banter" ?
>Nick.

As I have pointed out to you in another reply, these remarks came from
Walt after a GROSSLY offensive remark from you. The GROSSLY means that
you were clearly in the wrong, as it had the affect of provoking a
fellow from his normal state of mutual banter into an obviously deeply
offended person.

In some of your recent contributions, you have intimated that you are at
least 40 years old. Please behave accordingly.

Hi.

I purchased Pro-2036. It was on sale for $300 (This model is no
longer manufactured. It used to be $559.99 !!).

I would like to any mods available for this model (are there any ways
to change the freq step to 5 KHz around 800 MHz area ?? It is
possible to receive cells by using image freqs, but 12.5 KHz step
won't help).

Thanks in advance.

At the original site of the world's first permanent wireless station, an international
worldwide linkup will take place throughout the weekend.
This will be a multi operator station with 1x ICOM 775, 5 x ICOM 756's + 2 x ICOM 751's also 3 X ICOM 821H VHF at 2m & 70cms.into 6 seperate masts.

We will be using special licences from the RCA never before issued to speak directly
to Royal Naval warships, Concorde and cruise liners of both Cunard & P&O.

A Full connectivity chartlist and Frequency/Time schedule will be posted Tues 2nd.
Dec.

This will probably be the most ambitious global link ever attempted by Amateurs and Non- Amateurs on Amateur Frequencies. Special Licences and exemptions issued.

We will be using ICOM 756 into Explorer 1200 P.A. into Triband HF on a 120ft
Clarkes Texam Military Mast.

Special CALLSIGN GB100 IOW ...We await your calls on Saturday 6th Dec for 24Hrs+

Ben.

My take on this is slightly different -- the threat of litigation is not the problem, it is the libelous posts that are the cause of this Roger's post wanting the threats stopped is saying, in effect, "Go ahead and libel all you want. We won't sue."

A better approach is to stop the offensive posts. If you post something, be sure of what you're posting -- for you take the responsibility for your own words.

I missed the posting from submarine (must be where his head is at?), so
am following-up here.

Mozart had written complete symphonies by the age of 6. Most people
are never able to accomplish such a feat. By the same token, AltaVista
can search a gazillion pages in milliseconds, something no human
can do. So what. Whether someone can do what a tapeworm can
be taught to do is pretty irrelevant, isn't it? Can your 7 year old
understand
the basics behind the electronics that allow him or her to utilize
Morse Code? Being able to do what a monkey could probably be
taught to do isn't something I'd aspire to doing.

Sam:

Since these power supplies use a ferroresonant transformer, some buzzing is typical. If the resonating capacitor (across the dedicated winding of the transformer) is bad, it will make this problem worse. Also, loose hardware makes the local buzzing more pronounced.

GE had a kit for the unit which added a relay which opened the capacitor lead in receive mode to eliminate the local buzz for base-station use (imagine this noise next to your desk all day...) and PTT would close the relay during transmit. Subbing a new "motor start" type capacitor in place of the existing one would be a good way to begin to diagnose the problem.

I agree with Rosenfeld. N3CND has a criminal record in Aberdeen,Md. and Madison County Ga. a mile long. He neglects his children by not working while he is in good health. He is too gutless to sign these posts. But like Scott says,who cares? The only ones suffering here is Grim's kids.Does anyone care about these kids? They do not,so why should we?

These morons have to follow their own posts. Go to the site above and listen to W4NTI talk about digging up dead hams and eating them. This Jim Beam guzzling alcoholic would rather drink liquor and qrm hf than spend time with his terminally ill mother! His criminal background consists of lots of domestic violence againt a tiny oriental wife. Another winner.

The preceding post was made ny oris@dirtball.com It has nothing to do with the liberty net other than the fact that N3CND is one of the left wing fruits that usually jams the liberty net. He hangs out on 3901 if anyone would like to ask him why he jams the net. Or you can ask him about his rampant child neglect,false insurance claim,etc. If you have questions about his trash web page try support@negia.net They carry his trash domain.

That's right,WB2OTK (bad checks and a 10,500$ outstanding NAL),W4NTI (domestic abuse),KK4ME (child molestation charges),W2ZB(caught jamming by fellow FCC employees),N3CND (multiple felonies) are just the tip of the iceberg when it comes to the members of the Intercon Net. As we check each one of these individuals more turns up daily. Stay tuned!

I also have 2036 which is basically the same as the Uniden BC890XLT.
There is a mod for the 890 that re-enables the cell freqs, but I
understand this mod does not work for the 2036, although the radios are
identical. Let me know if you find any mods...

When did you pay 300.00? Not trying to tick you off, but I paid 100.00 at
R/S for this radio about a year ago on close out, it didn't have a power
supply however.

As of right now, my family owns 2 TV sets. The oldest of which is 10 years old (it works just fine). The new one is a little less than 2 years old, and we payed about $500 for it. I expect both of them to keep on working for quite some time. In addition to the above "problem" we also own 3 VHS VCR's. In addition to the above "disposable" hardware that we will have to fork out to replace, we also own on the order of $1000 worth of VHS tapes.

It *might* be nice to own a DVD player, along with some disks to play in it. As I stand in the shadow of HDTV and consider how much it's going to cost me to replace what I already own, I'm finding it hard to come up with a good reason to spend more money on an industry that doesn't seem to look at what they're about to do.

The above post is actually the first time that I've seen *anyone* say anything about the down side of HDTV other than that "gee whiz, a converter box might set the average consumer back a couple hundred bucks, but this isn't much to worry about". wake up people. This HDTV is a load of crap that the government and business is going to try to ram down our throats.

We both exercise the freedom of using utilizing hyperbole (recall
your "code causes brain damage" comment). But forgetting the
hyperbole, let's assume 99.9% of us are law-abiding; with a base
of say, 600,000, that means we have about 600 intensional lawbreakers
in the ham bands. I challenge you and others to provide 600 call-
signs belonging to these scumbags, state by state.

I'll start: Hawaii - none.

>And certainly those who send the endless strings of dits over
>digital operations are Morse operators. And likely those who
>swish carriers back and forth are too. You do hear less cussin'

Those are two big assumptions on your part (as MD has already
pointed out). They might be unlicensed operators.

>to buy the 200 for $275.00 and am wondering if this is a good deal. I am
>planing to use it on a Kenwood 940s

What advice do you want/need? There is a whole pile of watts different between the '200 and '220.

I use an SB-200 with my TS-940. Contrary to the belief of others, the '940 keys the amp. without problem. I choose the small amp years ago because it will run on 120v a.c.

The $275 sounds like a good price for this amp. By my meter, near 20 yr old 572B's give me 700 watts out on 80m, and down to about 400w on 10m.

I have no experience with the SB-220.

>
I believe, Masa, that you mean to say "Please don't make me appear
to be stupid," which I don't believe you are. However, the way your
web page is apparently worded, the *implication* may be (to those
people who are unfamiliar with other licensing structures) that *no*
license is required, which you and I and others know to be incorrect.
IMO, one of the problems with wording regulations, domestically and
internationally, is the need to explicitly state all possible meanings
as nearly as possible to cover all aspects addressed by the
regulations, and to avoid such misunderstandings.
Give it another go, knowing that other meanings based on different
experiences may exist. You must try to find as many of these meanings
as possible and address them in your wording, especially if you are
attempting to provide a reference work that is international in scope.

4010. Civics lesson: Slander vs. Libel vs. Liable

Newsgroup: rec.radio.amateur.misc
Date: 1997-11-30 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <65qu6k$n4r$1@w3eax.umd.edu>

Everyone around here seems to be hung up on the idea of
slander and libel.

Slander is defamation via the spoken word.

Libel is defamation via the printed word.

Many of the posts in these newsgroups tend to be
quite libelous.

Libel is DIFFERENT from liable, which describes
the responsibility of someone or something.

"If that catwalk falls, the company that built
it will be LIABLE for damages."

It can also imply the tendency of someone or something
to do something...

"He's liable to get angry when he sees this."

It's good to know English if that's your 1st
language.

>supervision).
>

In Canada, anyone may "operate" a licenced amateur radio station provided that they are under the direct supervision of a holder of an appropriate qualification. For HF, this would be B+5, B+12, A+5 or A+12.

I quote from the Radiocommunications Regulations, section 46, "Participation in Communications" which states in part:

(1) Any person may participate in the operation of radio apparatus that is licensed in the amateur radio service under the supervision and in the presence of an individual referred to in section 42.
(2) A holder of a radio licence in the amateur radio service may
(a) permit any person who does not hold a radio operator certificate or radio licence referred to in section 42 to operate radio apparatus subject to that holder's radio licence; and
(b) permit the participation in the operation referred to in paragraph (a) by any person only in accordance with subsection (1).

How else to introduce more prospective hams into the hobby than by letting them key the mike ? It is clear that the regulations recognize and permit this valuable activity to continue !

>MOST of us are mature enough to recognise these.)

I would certainly advise that you get a new newsreader, your's
is obviously faulty, unless (as I suspect) that you've only
caught the tail-end of the "discussion". My initial comments
to Walt were of a completely polite nature - any nastyness on
my part only came as a response to abusive language from Walt.
My refusal to add my callsign in newsgroup messages led to
attacks from Walt of me being a scrounger, (and worse). Would
you like me to send you a copy of examples of Walt being "kind &
considerate" ? I can if you wish.

>There is certainly no call
>for you to attack him in the way that you do; No one here is in
>any doubt that it was not Walt who initiated the grossly offensive
>remarks about gypsies, Jews and the Nazis.
>

Oh really ? Read it again ! It was Mr Davidson who initiated
that "discussion" (as John Kirby so rightly indicated) - or is
your reading ability defective too ?

I merely pointed out that many 1000's of E European gypsies were
killed along with Jews in WW2, and racism starts with comments
like Walt made. You think that it's grossly offensive ?
I think it's more offensive to forget that it ever happened.
People who forget history are destined to re-live it.

You and Walt are perfectly entitled to complain to Demon
Internet about the content of any of my messages if you wish.
However, you will appreciate that I keep a copy of all relevant
material too, and I may wish to reciprocate.

Nick.

WOW! "MOST!"

Apparently, Masa has gone from speaking for

himself

to speaking for

a majority of either

1) hams in the world, thus about 1,000,000 people, or
2) people in the world, or 2.6 BILLION!

Unfortunately, I couldn't tell from his comment.
Either way, do they know you're claiming to represent them?

I've been reading all the garbage on this group, the name calling, the airing of each other's "dirty laundry". Almost makes me embarassed to say I am an Amateur Operator. Guess what people - it is a HOBBY. This isn't a matter of life or death, for the most part. What someone did, getting or not getting convicted of drug abuse, makes *no* difference to his or her ability to operate their rig.

I posted a RE: article a while back, asking what this newsgroup was about. I received no answer. The article was one of the ones concerning the Code/No-Code issue. That, in my mind, is far closer to fitting in with the title *.misc than the garbage you people are posting.

Both my wife and I are amateurs.....neither one of us would be if we had been on the internet and had seen some of the web pages mentioned in your posts here. Guess what - neither side in your "arguement" should be allowed to hold their heads up.

Flatworms can be trained to run mazes too. Then if they are
chopped up and fed to other flatworms, those worms can run
the same mazes without training. Just because it can be done,
however, is not a sufficient reason to do it.

It would make me very happy if all of those on this newsgroup threatening litigation would simply quit doing it. Even the largely empty threats that I have seen on this forum relating to litigation (I doubt very much that those who make these threats have the money or the willpower to actually file a lawsuit) are very bad for the forum. For example, because of such threats, I know for a fact that many employers forbid employees from acessing usenet from work, or from work e-mail addresses. This is not desireable.

I suggest that those who can't participate in discussions without making such threats should simply not participate. Period. And the rest of us should refuse to exchange posts with those who do make such threats.

Just a thought/suggestion.

Actually, the survey showed that only 27% of the respondents reported that they *used* Morse Code. And 52% thought it didn't need to be an ITU requirement. But 54% did think it should be a test requirement for US licensing. The latter looks like a "do as I say, not as I do" type of response. I wonder how many in that latter group can actually still pass a Morse speed test for their class of license. Perhaps it is time to push for comprehensive retesting at renewal to find out. I wonder if we'd find 54% in support of that.

>rec.radio.amateur.misc.

That's typical of usenet propagation. Postings are passed from news site to news site in batches, usually once an hour, but for some sites only once a day (depending on traffic load, available net resources, etc). Depending on where your news site is in the network, and where the originating poster is, it can take hours or days for the message to migrate from its original posting site to a particular news site where you read news. Deja News is well connected in the usenet hierarchy and tends to get things before the leaf nodes at many of the smaller ISPs. But you may see posts from neighboring sites before they make their way to Deja News depending on how the forwarding routes are setup in your area.

There are routing maps you could consult to see where each usenet news site is in the overall virtual network, IE who forwards to who. At least there were when I was running a news site. The routing tree was very deep at some points, much shallower at others. I've heard the depth of the tree has been drastically pruned with the arrival of major ISPs into the usenet system, so delays in propagation of posts should be less now than it used to be. But there are still delays in getting all sites updated.

Well, it's too late for this year's JOTA.

But if M@S@ can get the word out maybe he can stop all those
Hams who allow kids to participate in the operation of their stations
in order to talk to Santa. Every time I hand the mike to a kid I am breaking
the law??

Maybe he could start with the operation at the Children's Hospital of Eastern
Ontario in Ottawa. Usually there is at least one person from Industry Canada
involved in this widespread law breaking. Imagine, every year thousands of
Canadian Hams blissfully breaking Federal laws completely unawares that
m@s@, between his university studies, has found time to figure out what they
really mean.

When I lived in Ottawa the CHEO Santa operators included the retired Chief of
Enforcement for the division responsible for Ham regulations - imagine, the
guy who enforced the rules breaking them willy-nilly and he never told us!

Oh, m@s@, while you're at it how about reverse patches? Or even normal patches
to non-hams? I seem to recall federal politicians, Ministers even,
participating in the operation of Ham stations while lacking licenses.

Law breakers abound!

Closed Circuit Advisory

Our support fund administrator Andy Jarema N6TCQ says that there is very little money in our account to pay Newslines' monthly expenses.

As you already know, the vast majority of the donations goes directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you. If we loose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.

Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service. It exists for the single purpose of channeling donations directly to the those providing services to the Newsline organization.

The address for the Newsline Support Fund is:

Newsline Support Fund
P.O.Box 660937
Arcadia, California
91066

As always, we thank you for your support.

That ends this weeks closed circuit advisory with Newsline Report number 1059 for release on Friday, November 28th 1997 to follow.

<*>

The following is a QST

WRC 97 closes and says that the no-code HF issue must wait at least another four years. Also, AT&T shows its support for ham radio with a major infusion of cash. These stories and more on Newsline report number 1059 coming your way right now:

<*>

WRC 97: Code To Stay For Now

Whether you are for or against codefree access to the high frequency bands, do not look for the worlds communications regulators to make it happen anytime in the near future. Perhaps not even in your lifetime. This because of what did not take place in Geneva.

Tabled for at least the next four years is consideration of changes to Article S25 of the international radio regulations. Article S25 contains the rules that are specific to the Amateur and Amateur Satellite Services. This includes the international commitment to the Morse code proficiency requirement for operation below 30 MHZ.

The decision to put off any action on changing the code requirement has nothing to do with the desires of those who want to maintain the code or see it go. Their voices were not even heard by the delegates attending WRC 97. Rather, the decision was purely an economic one based on using the assemblys' meager resources to benefit the greatest number of people. Ham radio in general and the Morse code in particular are not seen as being very important issues in a world that revolves around instant digital communications using satellites and the internet. As such, those hoping to see a codefree access to the high frequency bands for all license holders should not hold their breath.

While the delay in debating this issue has only been put off from 1999 to 2001, those who follow the WRC believe there is a very little chance it will be discussed then, or in the foreseeable future. Even if it were to make the agenda for 2001 and changes approved, it would probably take 4 to 5 years to get senate ratification of the revised treaty. Then another 4 to 6 years for the FCC to enact and implement new rules. This would put any codefree access to H-F off until 2012 at the earliest.

Also pushed back to the tentative agenda for the year 2001 is the possible realignment of the 40 meter band to resolve a conflict between hams and broadcasters in part of the band. This means that hams will have to live with the current 40 meter mess for at least another decade. We will have more on the outcome of WRC 97 next week.

(Via various sources)

<*>

ATT And Ham Radio

It's a lot more than just a big autopatch. American Telephone and Telegraph has decided to pour a lot of money into ham radio in northern Tennessee as a way of providing better emergency communications to the region.

AT&T has agreed to spend $100,000 to set up VHF and UHF repeaters and antenna systems. It will also provide Kentucky amateurs an operating area at one of its cellular telephone sites. Other cell sites will be equipped with receivers and linked back to the repeaters.

The beneficiary in all of this is the Northern Kentucky Amateur Radio Club. Amateur Radio provided the only communications during the first four days of the "Great Flood of '97." The efforts of hams during this disaster gained the attention and the respect of local government officials as well as that of AT&T.

ATT had been looking at possible cellular telephone sites that were previously not available. Based on its new marriage with Amateur Radio, AT&T was granted an emergency communications status and was permitted to build the sites.

In addition to its agreement with the Northern California Amateur Radio Club, AT&T hopes to set up other Amateur Radio systems in South-West Ohio. It also suffered major flooding earlier this year.

It is estimated that the total investment in the complete amateur radio and cellular telephone marriage by AT&T will top $300,000.

The result will be better emergency communications coverage in northern Kentucky, Southern Ohio and south-eastern Indiana.

Upset In Great Lakes Director Race

A major upset has taken place in this years ARRL Divisional Elections. An incumbent director has been defeated by an almost unknown newcomer.

Joe Falcone, N8TI, of Livonia, Michigan, out polled Great Lakes Division incumbent Director George Race, WB8BGY by a lopsided vote 4477 to 2531.

"I believe that it is because I actually directly communicated with the members. I received many comments from people saying 'this is the first time somebody has contacted me. This is the first time that somebody has written directly to me.

I sent virtually everybody a letter and then a postcard. These people were impressed by the fact that I was trying to bring them into the decision making process." N8TI)

Falcone is 48 years old, a tax litigation attorney and an ARRL life member. But he is unknown to most outside of the Great Lakes Division.

Outgoing Director George Race served as Great Lakes Division Vice Director before assuming his current position in June of 1995. This, when former Director Al Severson, AB8P, resigned for health related reasons. Severson died last September. Meantime Great Lakes Division Vice Director Dave Coons, WT8W, was unopposed for re-election. For other election results please visit the Leagues website at:

www.arrl.org

<*>

NY Recall Redux

There will be a second attempt to unseat the recently elected New York City and Long Island Section Manager.

Informed sources in New York this week indicate that a second attempt at recalling ARRL New York City/Long Island Section Manager Leonard Buonaiuto, KE2LE, is underway. ARRL Secretary David Sumner, K1ZZ, is said to have received a proposed notice of recall postmarked November 10 from Joseph L Tomasone, Jr., AB2M. Tomasone, of Deer Park, NY, initiated a similar but unsuccessful recall earlier this year.

To be valid, the petition bearing the signatures of at least 97 full League members of the section dated on or after November 10 must be received by ARRL no later than January 24, 1998. The first petition was rejected on this basis. This time, however, AB2M is seeking the required number plus an additional 20%.

The petition was circulated at the monthly meeting of the Long Island Mobile Amateur Radio Club. LIMARC is the largest club in the section.

At this date, there has been no public comment from the embattled NLI section manager.

More on this story as it develops.

(Via Hudson Division Loop)

<*>

More On Pirate Raids

A third pirate radio station was taken off the air in Tampa Florida when the government raided two others on November 19th. Kelly Benjamin who operated an unlicensed station on 87.9 MHz from nearby Seminole Heights was also hit when federal, state and local authorities raided unlicensed stations owned by Arthur Kobris and Doug Brewer Benjamin called his station 87 X and broadcast using the name Kelly Kombat. In addition to losing all of his station equipment, Benjamin was arrested on state charges of possessing marijuana and drug paraphernalia.

Doug Brewer, who operated The Party Pirate from his home could only watch as U.S. marshals rolled electronic equipment into a Ryder truck parked in

his driveway. Brewer said he was awakened at 6:30 AM by armed U.S. marshals who handcuffed him.

Agents seized equipment from his home studio and gear from his remote van. They also dismantled and hauled away his 150 foot tower. Some of the equipment taken belonged to other groups, including links for a pair of area ham radio repeaters.

Known on the air as Craven Moorehead, Brewer has taunted FCC officials on and off the air. He refused to pay a $1,000 FCC fine and Web page contains photographs of agents outside his house measuring the radio signal.

Meantime, this latest FCC enforcement action has drawn praise from the broadcast community. Drew Rashbaum, vice president and general manager of five radio stations, including WHPT in Tampa lauded the raids and seizures. Rashbaum says that he is the person who filed the complaint against Brewer last year.

While the FCC refuses to comment, most in the broadcast industry believe that raids like this will continue for some time to come. This as the government acts to remove every trace of unlicensed radio broadcast from the airwaves -- that it can.

(Via published news reports)

<*>

Dunifer Wins Round 2

Meantime Steven Dunifer, who calls himself an unlicensed microbroadcaster as opposed to a pirate broadcaster has won yet another round in court against the FCC.

The latest twist in a long running court battle between the FCC and an unlicensed West coast microbroadcaster has pirate radio broadcasters crowing and government lawyers researching. Bottom line: A landmark court decision on pirate radio looms in the new year.

In a ruling issued on November 15th, Federal District Judge Claudia Wilkin refused to shut down the long running, unlicensed San Francisco area microbroadcaster Free Radio Berkeley. Instead, before she will decide the judge wants to hear more from both sides over station founder Steven Dunifers' claim that Free Radio Berkeley's without a license are not illegal because FCC licensing regulations violate the constitutional guarantee of freedom of speech.

Judge Wilkin wrote: "...If the regulations were unconstitutional would this justify Mr. Dunifers' action without having or even attempting to obtain a license and prevent the FCC from obtaining an injunction. The judge spent much of the fourteen page ruling rejecting the FCC argument that she did not have jurisdiction to rule on the constitutionality of federal radio regulations but did have the power to order Free Radio Berkeley off the air. Free Radio Berkeley's lawyers successfully called that a 'Catch 22.'

At the heart of the unlicensed stations case is the FCC's refusal to grant licenses to microbroadcasters. These are stations that transmit 10 watts or less. It is unclear then as to how the Dunifer case will apply to the growing number of higher power unlicensed stations coming on the air across America. In a 'Friend of Court' brief, the Lawyers Guild pointed out that FCC regulations omission of 10 watt licenses makes it impossible for all but the very wealthy to even apply for a broadcast license. This, the Guild concluded, is the equivalent of saying that anyone can speak from a soap-box in a park, but the box had to be made of gold.

Still, the Dunifer case seems to have had little immediate impact nationwide with other federal judges routinely upholding FCC seizures of unlicensed stations. The FCC meanwhile continues to push enforcement, pressing federal prosecutors for equipment seizures and criminal contempt charges against pirates who have resumed operation with replacement transmitters even after court ordered seizure.

(Warren Elly, W1GUD)

While the FCC may have its hands tied in the Dunifer case, its not holding back on taking other unlicensed broadcasters off the air. The recent raids of pirate stations in Florida, Missouri and even in the 9th Circuit Courts' back yard in Sacramento, California seen to say that the government has declared open season on anyone taking to the airwaves without a license to do so.

(Via Newsline)

<*>

Arizona Jammer Must Pay Fine

Meanwhile, hams in and around Phoenix, Arizona have learned that a man fined by the FCC for malicious interference and other rules violations has finally agreed to pay up. He is Timothy Harold Hoffman and in 1996 he was ordered to pay $6000 for repeated violations, including interference to local repeaters.

The violations were called to the Commission's attention by the Arizona Repeater Association's ARRL sanctioned Local Interference Committee. After investigation, Hoffman was cited for five specific violations. These included transmitting on Amateur Radio frequencies without a valid operator or station license, and willfully interfering with radio communications.

But, it was not easy to get action against Hoffman. According to Lance Halley, KW7LH, it took a multitude of long distance calls by the committee, support from Commission personal, input from Congress, and even the White House, to get a Notice of Forfeiture and a federal court judgment in the case.

(Via Arizona Repeater Assn.)

<*>

Pacific Division Winners

On a much happier note, word that Doug Hendricks, KI6DS, and Jim Cates, WA6GER, have been named Pacific Division 1997 Hams of the Year. This at the recent Pacificon '97 convention.

Both men are the co-founders of the famed Northern California QRP Club. The proclamation says that through their leadership the Northern California club has grown to over 2500 members in 50 states and 60 nations, worldwide.

<*>

Bogus Bottles

And RF Parts in San Marcos, California, is asking if anyone has encountered counterfeit high power transmitting tubes including types 3-500Z, 3-500ZG and 4-400. This at flea markets or through overseas suppliers.

According to an internet posting by RF Parts' Merit Arnold, W6NQ, since Eimac left the glass tube business, he's learned of instances where Eimac and Amperex logos and cleverly copied markings or labels have been applied to tubes manufactured in China. The tubes are then packaged in yellow Eimac style or Amperex boxes.

Arnold says that would like to hear from anyone who has run into these bogus tubes. E-mail him at:

rfp@rfparts.com

(Via ARRL, others)

<*>

Chips - Chips And More Chips

The U.S. Department of Commerce has dealt a blow to some foreign chip makers and to one U.S. firm in an anti-dumping case. Alliance Semiconductor Corp., a San Jose based manufacturer says that in a preliminary ruling, the Commerce Department said Alliance should pay a duty of 59.06 percent on imports of Taiwan fabricated static random access memory also called S-RAMs. These are widely used memory chips which do

not require power to hold content, unlike dyanmic random access memory chips.

The Commerce Department has also announced that anti-dumping duties of various rates of up to 113.85 percent should be imposed on companies which manufacture S-RAM chips in Taiwan or Korea and import these products into the United States.

And what does all this mean to U-S hams? Prices for new computers and other gear using memory chips are bound to go up.

(Via published news reports)

<*>

Mir Frequency Experiment

The ham radio station on board Mir is changing frequency once again. This, as part of an ongoing experiment to better understand how these frequencies will be effective on the International Space Station.

For phase 1, a 70 centimeter to 2 meter crosslink experiment will operate for a 3 month period. On December 1 the Mir operating frequencies will change to an Uplink of 437.850 MHZ and a downlink at 145.800 MHZ. This will last for three months.

Phase 2 of this experiment will use a 2 meter only set of uplink and downlink frequencies. This part of the experiment will begin on March 1, 1998 and will also be of 3 months duration.

(Via MIREX)

<*>

DX

In DX, 6 meters is opening to Europe. Peter Sprengel, PY5CC in the Netherlands reports that on the evening of November 22nd, he heard and worked 7J6CCU. The contact occurred at 23:33 UTC on 50.110 MHZ, with both stations using SSB.

On the high frequency bands, G3OZF, will be operating as 9M2/G3OZF from Pulau Pangkor starting on November through to December 2nd. Activity will be from 80 through 10 meters with the emphasis on CW. QSL to his home call.

And look for JF1SQC, JK3GAD and JR7OMD to be operational from Guam as AH2R operating a Multi Single station. QSL via JI3ERV.

You're right Gary about the re-test every time for renewal. I'm sure
you would see the respondents change their mind. So if that's the
case there should be re-tests for evey type of license given out, ie.
auto licenses. I think it should be done. All types of privileges
are being abused because once a license is passed a number of people
just through the rules by the wayside. Just think of the last time
you were out driving. Society as a whole has taken the attitude of
lowering every kind of standard.

Lets start making every type of test in society harder, no waivers and
no lowering of standards because people whine!

As for my two cents, lets keep the code. Many HAMS in other countries
are not fortunate enough to be able to afford fancy SSB/AM rigs for
phone, so CW is their only mode. I guess the ITU can relax the code
requirement so us Americans with the money can talk to ourselves on
HF.

Hello Doug,

I Have done some research for a regional media company on this issue and you may not be far off the mark. There is some real concern about a developing market of TV have and have nots and what the impact will be on ratings and advertising sales. $200 - $700 IS a lot to pay for a converter box just so you can use your old TV. The projected prices for the all in one HDTV sets range from a low of $1,000 all the way up. There is even a possibility that broadcasters will not use all of the bandwith given to them for "free" HDTV. It is possible to use a lower quality version of HDTV at reduced bandwith and then sell premium services with the remaining allocation.

Several years ago there was a "trial baloon" floated within the Clinton administration concerning the Federal Government subsidizing these converter boxes for families who could not afford them. This is not as strange as it sounds

since Newt Gingrich has spoken on the possibility of subsidized computers and network connections for the poor. There could be support from both sides of the aisle on both of these concepts. Wired Magazine recently published some very insightful articles on this subject.

WireHead Prime (wiredone@raccoon.com) wrote:
: On the FM band in the US, 100 mw out would NOT be legal...

They get away with selling them from Ramsey because they are
exempt (kits) and the builder must comply with FCC rule.

: AND, if you're talking about the FM-10, it is a myth that it puts out
: 100 mw (they're AM transmitter may, however)...the FM-10 and FM-10a
: only put out about 8-10 mw in stock configuration.

I would like to say 2 or 3mw myself. It ain't much that's for
sure. A longer antenna helps, but a more efficient RF final is better.

: Although, with a
: few simple mods invented by squest it is possible, with the stock
: transistor, to get 200-250 mw out of an FM-10.

I was just going to say that. :) Plus, the parts needed to do
the mod to 250mw can be had at any Radio Shack. The mod to go up to
.940mw you need to purchase the transistor from an ECG, SK, or NTE dealer.

: Technically, the part
: is rated at 250 mw but if you want to do that mod, you want to drop
: a little top hat heatsink on top. =-)

Gets warm, but it won't die. I have an NTE-23 running without
heatsink right now, been running since turkey day. :) Output = 940mw
approximate. :) Running from a modified "Sound Feeder". :)

: Oh yeah, although I'm not directly responding to you here...in it's
: stock configuration the FM-10 can cover much more than 300 feet with
: a well designed and properly located antenna. =-)

Up high, to radiate out. :) 3rd story apartment advantage, eh
WireHead? ;)

Kevin,

Maybe you should stay on the radio and stay out of r.r.a.m. and other amateur radio newsgroups. They are only for those with strong stomachs and confidence in their station in life. If you have neither...get out while you can...unless you are a bird of a feather.

There is very little that is said nowadays in here that really reflects the true amateur radio. This is the only place where the Chicken Littles can scream "the sky is falling!" anymore. They've already been laughed off the air. With nowhere else to go they come here where their words are read by those of the perusing persuasion.

Every now and then some us like to put our hands into this hornet's nest and stir vigorously. The result is hilarious. It takes years for them darn hornets to settle back down. Their only goal in life is sting each other and anyone else who happens to stop by for some entertainment and then comment about it.

It seems r.r.a.m. and r.r.a.p. are but a few places left on earth where these poor hornets can be heard. They are ignored everywhere else. A post, such as yours, is just what they want to see. That is the fuel to their fire -- that amateur radio is on the decline. The contrary is true. Amateur radio is growing and evolving. Hornets can't see that as they are always flying around their nests waiting to pounce and sting anyone who does not see life as they see it. Hmmm, of all the frequencies we have available to us as hams I only see two or three get mentioned in here, i.e. 14.313, 3853+/- and that is a true indicator that amateur radio is on the decline? Wooooooo. These hornets like to hang around those frequencies too. Operate elsewhere and you'll have a very good chance of never having to run into them. I was unfortunate as I got stung by one of them who happened to be using one of the local area 10 meter repeaters one night. I learned real fast.

For the most part these hornets are too ignorant to remember that the Oh-En-Slash-Oh-Eff-Eff filter [that's ON/OFF] or their VFO can take them away from the negativity. Awww...but they live for that. They probably only use rockbound rigs and the only way to turn them off is to pull the plug from the outlet on the other side of the room. Too far to walk so they live to be negative. You can too if you so choose to do so.

jj said that.

Bdeing a ham was something special at one time. Now it is slowing dying and there's nothing that can be done. Waivers, no code and people acting like children has made ham radio a laughing stock even on the CB bands. The other countries of the world look at American hams as criminals. It's over folks. Turn out the lights the party is over.

Pat,

With VHF and UHF, the problem is not so much power out as line of sight. Both VHF and UHF are (for the most part) line of sight frequencies. If you and your buddy were standing on top of hills, several miles apart, with nothing in between to block or redirect the signal, chances are pretty good that you'd be able to communicate. As for the Local Radio Shack Answer Man, he's correct. It's illeagle to modify those radio's to increase the power out, run the output from them into an external power amplifier, or into an external antenna. You are pretty much stuck with what you've got. One option you and your buddy have is to take your Technician class Amateur Radio test. If you pass, you have all privledges above 30 Mhz (which sounds like what you want anyway). Go back to the Local Radio Shack and ask for a manual for the No Code Technician Class Amateur Radio License.

My name is Dane Springer and I am 16 years old. I am sereously interested in pirate radio. I bought the Ramsy FM-10 and setup a j pole antenna on my roof. Suprisingly the signal travaled about 1500ft. I wouldf like to boost the power of my FM-10 to about 5-10 watts. I was wondering if i bought a 50 watt 2meter RF boster at radio shack would that work? My maximum I can spend is about $60. thanks.

The HDTV transmissions will not be at the cost of elimination
of regular TV channels. There will be a period of time (10
years) when both types of signals will be available. In that
time, it is very unlikly that most (not all, but most) people will
have migrated to HDTV by purchasing at least one HDTV set.

No reason to be ashamed, Kevin. As we reduce entry requirements for
ham radio to the "lowest common denominator" in some liberal attempt
to be "fair" to "everyone" (since, in a liberal's mind, everyone should
be the same; everyone should be a brain surgeon, nobody should be a garbage
collector, its demeaning to their self-worth, and we can't have that now,
can we?), we're going to get more and more nitwits as the bell-curve of
the intelligence of those in amateur radio begins to skew back to a more
normalized distribution as is reflected in society. All you see in ham
radio today is what you would see if you walked down the street of any
inner city.

>I posted a RE: article a while back, asking what this newsgroup was
>about. I received no answer.

By definition, a "misc" newsgroup isn't "about" anything. Its about
everything that doesn't fit into one of the other amateur radio newsgroups.

>The article was one of the ones

I believe the exact term was "used morse code *regularly*".

>And 52% thought it didn't need to be an ITU requirement.

Reasonable. The ITU requires code to be a part of the licensing
structure for each country. In reality, each country should decide
what licensing standards are appropriate. Not requiring code as a
licensing element, and allowing each country to determine its own
licensing standards, are two different issues.

>But 54% did think it should be a test requirement for US licensing.
>The latter looks like a "do as I say, not as I do" type of response.

Not at all. Reread the last sentence in my previous paragraph. I
fully support a code test for HF licensing here in the states. On
the other hand, if Ian manages to complain enough and the New Zealand
authorities want to create a codeless license for the morsely challenged,
they should have that capability.

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

[NOTE: This article starts very directly at TCP/IP/AR, then moves to the larger arena of the thread, and then further out still. I know I know, Im sorry, but when I get into rant mode....Its kinda hard to stop]

In article <o6qauGAvxLY0Ew$9@g4udt.demon.co.uk> you wrote:

: Amateur radio TCP/IP has never been, and will never be, a viable
: alternative to the Internet and those amateurs who have spent money on
: amateur radio TCP/IP systems have wasted their money.

While I agree that TCP/IP/AR will never keep up with the bandwidth of the internet, that does not mean that the amateurs who have spent money on amateur radio TCP/IP systems have wasted their money.

It could be argued that Mobile Telephones are a much more viable than VHF/UHF Handhelds, or even more generally that Telephones are much more viable for WorldWide Communication than Amateur Radio. (I have had people say to me "Why Not Just Use A Telephone ?")

As we all know there is more to Amateur Radio than just talking to someone at the end of another microphone. There is Experimentation, Invention, Innovation, Challenge, Self-Eduation etc etc as the Licence says.

TCP/IP/AR (to me anyway) is a very exciting part of our hobby. The challenges of getting a protocol to work over a medium such as Radio Waves, for which it was never designed are what Amateur Radio Is About (Or What Part Of Amateur Radio Is About IMHO).

Amateur Radio Enthusiasts have always pioneered new ways of doing things in the past. Hopefully we will continue to in the future. Unfortunately (to some anyway) where as before it didn't, the future will involve computers more and more.

Someone (Walt I Think) commented that maybe we should be arcade game servers on Amateur Radio to entice new blood(I think he was being at least somewhat sarcastic btw *grin*).

Well no, we don't have to do anything quite as drastic as that, but we do need to have new modes and new challenges to keep the hobby alive. Just because someone is young and has no interest in CW, or SSB, or even voice doesn't make them any less an Amateur Radio Enthusiast than anyone else involved in the Hobby.

Some Amateurs belive that a "True Amateur" only uses CW on HF. Others believe that the "True Amateur" builds all his own equipment. Some believe that any Amateur that uses Packet, or other digital mode, and not voice is not a "True

Amateur".

Well I belive that they are *all* wrong. Amateur Radio is a very
large hobby, and draws its membership from a wide variety of different types
of people. As a consequence of this, a large number of differing opinions have
formed as to what the "True Amateur" is.

This is a good thing. It will ensure that our hobby stays alive for a long time
to come. Yes that hobby may not involve CW any more, or HF anymore(Sorry Walt:>),
it may not involve TCP/IP/AR, or AX25, but the hobby will be alive in one form
or other.

Right now "My" Generation, and those younger than me probably find CW boring, and
old, and have no interest in it. One possible reason for this is that it has been
done. There is no challenge in it for them, no "doing something new" feeling. In
100 years time, CW may well become the mode of choice again, as everyone gets
bored with all the modern digital modes. However CW won't become the mode of
choice again if the hobby has died.

Another reason amateur radio may be in decline is that we as "Amateurs" are
inflexible. Yes thats right. We Are. All of us that say anything like "The
True Amateur does blah blah blah", or "A Real Amateur would never do blah blah
blah" are guilty of discouraging new blood from entering the hobby.

Surely it does not matter if someone comes into the hobby and only uses CW, or
only uses Packet, or only uses 2m FM repeaters, or any other mode ? Surely the
Spirit of Amateur Radio is more important ? The communicating with others, the
doing of things youve never done before, The experimenting, etc etc.

If Amateur Radio has the image of being CW & HF, or if it has the image of only
Packet and 2m FM then surely people in the "opposite camp" are going to be
discouraged. Surely if Amateur Radio has the image of being CW & HF & Packet &
2M FM, we are much more likely to get new blood into the hobby, and also new
blood from a much wider range of backgrounds, thus ensuring Amateur Radio's
survival ?

OK, I know it was long, I know some of it was off topic somewhat, rant over

73s

Iain(G7III)

SB DX @ WW $OPDX.333
Ohio/Penn DX Bulletin No. 333

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 333
BID: $OPDX.332
December 1, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2BF, N2NL, NY2U, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, K4JRB, N5OGP, W5IJU & Island/DX News, KD6BYI, K7WX, DL2CC, F6AJA & LNDX, G4BUE & DX News Sheet, G4FRE and LU1DZ for the following DX information.

10-10 NET. With 10 meters becoming very active, check out the Channel Islands Chapter's "10X International Net" every Wednesday at 1800-2000z and again at 0200-0400z. Non-members are welcome. For more information, send E-mail to: rcnoll@ix.netcom.com

5X, UGANDA. Frank, DL2CC, will be active until December 3rd with the callsign 5X1M. His activity will be mainly on CW and the low bands, but also RTTY and SSB. QSL via ON5NT.

8Q, MALDIVES. (Excerpts from a press release. OPDX InterNet Subscribers will receive an additional bulletin with the complete news release). The Central Arizona DX Association has announced an upcoming DXpedition to the Republic of the Maldives (8Q7, Zone 22, Indian Ocean). The team leaves Los Angeles for Taipei on January 16th, and will arrive in the capital city of Male by January 18th, after a brief stopover in in Singapore. Their plans are to be active beginning January 19th, with 24 hour operating on most bands through January 28th. They will be using the callsign 8Q7AA. Members of the 8Q7AA DXpedition team will be:

For SSB: Nilda/NP3BY, Oscar/KP4RF, Sally/KM5EP, Rich/K7ZV and Dan/NA7DB
For CW: Bruce/N6NT, Darryl/AF7O, Warren/K7WX, Steve/N7TX and Stephen/NN7X
For RTTY: Bruce/N6NT will also run HF RTTY as operating time permits.

There will be four stations running Yaesu FT-1000MP transceivers, Alpha amplifiers and Force 12 antennas from 160 through 10-meters, including all WARC bands. A concentrated effort will be made on the low bands with

adequate power and antennas. N6NT, K7WX, K7ZV and NN7X will focus on 40, 80 and 160-meters, with special attention being given to openings for North America. The 8Q7AA operation will be active during the CQWW 160 meter CW DX Contest. This contest begins at 2200 GMT on January 23 and ends on January 25th. 8Q7AA will be a high power multi-operator entry in this contest. QSL requests can go to N7TX either direct, bureau or E-mail routes. Direct QSLs to: Steve Thompson, N7TX, 119 E. Jasmine St., Mesa, AZ 85201-1811 USA (Please enclose an airmail SASE with adequate postage.) Bureau QSLs: Cards should be clearly marked 8Q7AA via N7TX. Internet: Bureau QSLs can be requested by sending E-mail to the following address: n7tx@cadxa.org -- More complete details are available at their WWW home page: http://www.cadxa.org/8q7aa

9K, KUWAIT. The "DXNS" report Bob, 9K2ZZ, is once again active. He will be there until December, 1998. A log server is available at the following WEB site: http://194.54.253.223/ QSL via W8CNL, direct only.

ATTENTION RTTY CONTESTERS! William "Mr. Bill" Eddy, NY2U, President of TARA and Contest Manager, has informed OPDX that QST has published the wrong dates for the "TARA RTTY Sprint". Mr. Bill states the Troy Amateur Radio Association (TARA) has, for the last six years, sponsored the "Annual TARA RTTY SPRINT" which is normally held on the second weekend of December. However, this year the contest was moved to the first weekend of December (6th and 7th) to avoid any conflict with the ARRL's 10 Meter Contest. The trouble they have now is that the ARRL has put their OLD contest weekend date (December 13rd and 14th) in their November issue of QST, on page 94! Mr. Bill states, "I would feel really terrible if somebody missed our contest due to this error." He has also supplied OPDX with the complete set of "Official Rules and Regulations" for the contest. OPDX InterNet Subscribers will receive this as an additional bulletin.

ATTENTION 160M CONTESTERS! It has been reported that the December issue of the CQ Contest Column has the wrong mode listed for the January contest dates. January is CW not SSB. The SSB dates are February 27th to March 1st (2200Z to 1600Z). The conetst was moved back one week to avoid the ARRL CW DX Contest.

A4, OMAN. After their stay and activity from Ali's (A61AJ) QTH, look for David/K3LP and Rich/KE3Q to be active as A43/K3LP and A43/KE3Q. They will stay in Muscat from December 2-5th. QSL via W3UR (ex WR3E).

GD, ISLE OF MAN. Look for Steve this week (if you do not work him during the contest this past weekend) as GD4UOL. His activity will last until December 6th with operations on CW. QSL via GD Bureau.

IOTA NUMBERS PLEASE! Some indivduals were asking what the IOTA numbers were for Deception Island (LU1ZC) and Staten Island (L20XSI) mentioned in last week's bulletin (OPDX.332). Staten Island is IOTA SA-049 and Deception Island is IOTA AN-010.

J8, ST. VINCENT. "The Daily DX" reports that Volkmar, DF2SS, will operate from this Caribean Island from December 20th to January 9th. He will be signing J8/DF2SS. He plans to be active on RTTY and CW. QSL via DL2MDZ.

KH2, GUAM. Dave, N2NL, reports he is being transferred (he is with the U.S. Coast Guard) to Guam in January. He will be there for at least 2 years. Dave has indicated he will be active as N2NL/KH2 sometime in the spring (once all his equipment has arrived on the island). He will operate mostly CW and will be active on most bands and in contests. His operating time will be somewhat limited due to the nature of his job (he is stationed on a patrol boat but plans to be quite active when he can). He also mentions his tentative plans to put KH2 and KH0 on 160 meters during the winter season of 1998 and 1999 (especially to help Europe and the US with these two countries on topband). His tentative QSL information is via either W2YC or CBA.

MU, GUERNSEY. If you were lucky to work Jay, K4LZE, as MW0BKA from Wales, you may be just as lucky to catch him as MU0BKA from Guernsey between December 4-9th. His activity will be mainly CW 160-10 meters, 7 kHz up from bottom of the band edge. There will be some SSB. QSL via home call.

NEW PROPAGATION SERVICE AVAILABLE FOR AMATEURS! Announced this week was the availability of a new radio propagation service known as "CAROS", or the Coordinated Amateur Radio Observation System. This service can be found on the World-Wide-Web at: http://solar.uleth.ca/solar/www/caros.html CAROS is based on the principle of amateurs contributing radio propagation information for others to use. They have been planning to implement such a service primarily to test whether amateurs can supply sufficient information to make such a global service useful. Its success or failure will be directly dependent upon those who use it and find it useful. The complete announcement and details will be available to all OPDX InterNet Subscribers as an additional bulletin.

OFFICERS ELECETED.....
By acclamation, the North Jersey DX Association has re-elected its incumbent officers to serve for another year: President - Ben Friedland, K2BF; Vice President - John Sawina, NA2R; Treasurer - Gene Ingraham, N2BIM and Secretary Bill Hudzuk, W2UDT

The Oklahoma DX Association has elected the following officers for their 1997-98 Associational year: President - Bruce Burnette, K5PX; Vice President - Craig Boyer, AH9B; Vice President - Dave Land, KD5FX and Secretary/Treasurer - Mark Byard, N5OGP. The following Directors have been appointed: Northwest - Lu Fisher, K5YP; Southwest - Troy Warren, K5OH; Central - Coy Day, N5OK; Southeast - Lee Ward, W5UDA and Northeast - Jerry Chouinard, K5YAA.

P4, ARUBA. The 59(9) DXReport states Martin, VE3MR, will be here as P40MR until late April. He operates SSB. QSL via VE3MR.

QSL INFO FOR THE CQWW CW DX CONTEST. If you are looking for help to locate QSL help on the stations you worked this past weekend during the contest, check out the following WEB sites. These sites are updated almost daily:

Dennis, K7BV, keeps a list of the DXpeditions that were to be active in the contest on the NCJ WEB site at: http://waterw.com/~ncj

Bill's (NG3K) Web sites also has info which can be obtained at: http://www.cpcug.org/user/wfeidt/Misc/cqcw97.html (or his mirror site if server is down: http://www.his.com/~wfeidt/Misc/cqcw97.html)

SPECIAL EVENT. The French DX Bulletin reports that F5HWB will be using the special callsign TM0UN from November 29th to December 4th for "World Day for Disable Persons". QSL via F5HWB.

SPECIAL EVENT. Members from the Northern Ohio Amateur Radio Society (NOARS) will be active on the U.S.S Cod Submarine, located on the shores of Lake Erie in Cleveland, Ohio, December 7th, which is Pearl Harbor Day. They will be using the callsign K8KRG. There will be network news coverage at the submarine as well as "Ham Radio" operations on the General parts of the bands, mainly 40 and 80 meters. A new color QSL card can be obtained.

SPECIAL EVENT. Joel, WU1F, announces he will be active as K1K from December 23-30th to celebrate the eight nights of Hanukkah ("The Festival of Lights"). QSL via WU1F (direct or bureau).

VK, AUSTRALIA (and the Fiji Islands). Dave, G4FRE, and Meg, G7FRE, are currently operating from here on 80-6 meter as VK2IDR and VK2TNL respectively until December 15th. They will be in Fiji, December 16-20th on their way back to the USA. They are currently awaiting the licencing paperwork to operate from there. There is a good possibility the itinerary will be repeated after Christmas. QSLs via G3AUA.

Small + handy program, Address, can fill, read, and organise a
database. You can use it for any topics such as books, customers,
music, car, cd, parts, clients, etc... and makes as many different
databases as you like.
The extended search possibility of the program makes it suitable for
any application where many items need to be ordained and found in a
few seconds.
This program gives you the way to manage your collection of items
whatever their topic. This without the complication of big database
programs. You can start without any specific knowledge on the subject.
you just need a mouse... and visit:

http://www.xs4all.nl/~bernard

see you there,

Hi there,

I have a Ranger Communications RCI-6030 VHF-Marine rig which I want to trade for a scanner. The RCI-6030 has the following features: All USA and International channels (156-162 MHz), all 10 NOAA weather channels, 25 watts output power (full legal power), 1 watt low power, Dual Channel Watch, Instant Channel 16, Digital PLL tuning, backlit LCD display, "water tight" casing, and more. Comes with the microphone (with channel control on mic). Very good condition. This is a current production unit, not discontinued. I am looking for a portable or base/mobile scanner (preferably portable) which covers 800 MHz (not nessesarly gapless 800 MHz), and preferably also the VHF Air Band (118-136 MHz). Any number of channels will do. Anything in good condition will also do. Please email me if you have any offer. I am in the Philadelphia, PA area. Thanks.

73's,

I've got two articles in front of me. One, from the Akron (OH)
Beacon-Journal of Dec. 27 says a converter will sell for about $200.
The other, from the Chicago Tribune, quotes a Thomson Consumer
Products executive who sets the price of a converter at $700.

Unfortunately, a converter won't be trivial. The technical
characteristics are very different; the converter will need to contain
most of the circuits present in a full HDTV TV. About all they can
omit is the (admittedly expensive) high-resolution CRT.

Personally, I'm offended by both figures. I watch TV when there's big
news (OKC bombing, severe weather, etc), when the UW Badgers are in a
national championship, or if I think the DX is up. If I have to spend
$200 per set to keep watching TV, I think I'll settle for radio...

>according to the labels on the radios themselves when I purchased them.
Are you sure you aren't confusing type-acceptance and certification of
compliance with Part 15? Part 15 is the one regulating unintentional
transmission, and my understanding is the certification is that the
radio doesn't have unacceptable spurious radiation from the
receiver. (which is why your TV set has a similar label - it
certifies that the TV's local oscillator won't radiate enough RF to
wipe out reception on other channels)

Isn't there a soft reset? On my TS-680, if I hold the A=B button
while turning the radio on, it resets the CPU and clears the memories.
(and sends "RESET" in Morse with the sidetone!) Or was it so
brain-dead that didn't work?!

True, but you're only required to give your FCC-assigned call at
10-minute intervals. In an event where a given station (especially
the NCS!) transmits a lot, tactical calls can save a lot of time.

Steve,

The irony of the converter box solution is that it will just convert the
HDTV signals to a format which can be displayed on the standard 525 line
TV screen.
There are some people who think that the $300 - $700 converter box will
somehow transform their present TV into a HDTV display. Also, you
mentioned your VCR. Add to that your camcorder and any taping you have
done with that. There is no doubt that all of this conversion will cost,
and cost big. I am assuming that the public demand for this service must
be overwhelming the FCC.

I just purchased a 1990 Infiniti M30. I would like to install a mag mount antenna on the trunk (so I can remove the antenna and store it in the trunk when I'm not using it--for security reasons). I would like to route the coax from the inside of the trunk to the inside of the car. However, I have yet to find any easy way (non-destructive way) to do this. Anyone have any experience with this model?

Also, any ideas on how I can route a power line from the battery to the trunk to feed a 30-watt 2m amp?

Finally, I am also looking for a way to mount my rig in the car without drilling/glueing.

I can be reached at Yohei@OU.edu

>and business is going to try to ram down our throats.

As Bill notes, there will be *at least* a 10 year phase in of DTV broadcasting.
Originally, the FCC had set a hard and fast 10 year deadline, but that didn't
last long. The plan now is to maintain NTSC transmission until DTV receivers
reach saturation in the marketplace. (What constitutes saturation is still
somewhat obscure, numbers ranging from 80% to 90% market penetration
seem to be the target point.) My personal opinion is that it will likely take
15 to 20 years to reach that saturation level. But if DTV gains the same
sort of rapid acceptance that CDs did in music, the 10 year target could
be met.

Note well I didn't say HDTV. The industry now prefers to just call it DTV.
Several definition levels can be used ranging from NTSC equivalent to
full HDTV. This gives the market more flexibility which will be needed
until inventories of HDTV programming become sufficient to supply
demand.

The transmission standard will allow up to 4 simultaneous NTSC quality program streams. And it is likely that the broadcaster will take advantage of this in certain time periods. For example, it is very unlikely that news programming will ever be in HDTV, nor is it likely that infotainment programming or older syndicated product will ever be in HDTV. For news, the origination equipment is too expensive to procure in the quantities needed, and the higher performance is generally unwarranted. And older product was shot in low res standards so you'd have a garbage in, garbage out effect if you tried to convert it to HDTV.

HDTV will appear first in sporting event coverage and in first run prime time network programming. One network has privately committed to its affiliates that it will guarantee 5 hours of prime time HDTV a week by October 1998. That will expand as market saturation increases. But outside prime time, it is likely that the broadcasters will supply multiple program streams at lower definition for a long time to come simply because there isn't enough HDTV product to fill the hours, and won't be for many years.

The inability of NTSC viewers to access these additional program streams may serve as an incentive for them to upgrade their equipment to DTV. That would give them access to much more free programming for a one time equipment cost rather than an ongoing monthly cable fee.

And thats not the only benefit. Even at NTSC resolution, pictures will be much higher quality to the average viewer with DTV because of freedom from ghosting, noise, and interference. Most viewers will be able to discontinue cable service and still get high quality reception.

DTV will allow the free over the air broadcaster to regain some ground against cable. And local content will continue to hold ground against DSS. This will mean lower costs and more choice for the viewer.

Broadcasters are taking an enormous gamble on DTV. It will cost about $50,000,000 per station to convert to DTV. If DTV doesn't pay off in terms of increased viewership (and hence higher ad revenues), there are going to be a lot of bankruptcies in the broadcast business over the next decade.

Bill,

As I understand it, this ten year period is already in effect. Am I wrong in thinking that as of the year 2007 the present television frequency allocation will be deleated, or does this extend out to the year 2017? If the first is true, than it means that about 100,000,000 HDTV sets must be produced and purchased within the next 10 years to get to the 90% penetration area. If my math is correct, this means that there needs to be an expenditure of about 150 billion dollars by consumers in this 10 year period (average $1,500 per set). This does not include VCR and camcorder upgrades. IMHO I do not believe that the average consumer realizes the expense they are facing. Personally, I plan to get a HDTV set, but probably only one. Presently my family uses 3 televisions in the house. If converter boxes reach the sub $100 level, I may purchase them for the other TVs. The person I feel sorry for is the uninformed consumer who purchases that big 50 inch analog home theater system 4 or 5 years from now :)

Oersted is officially credited with that rediscovery in 1820. I'm not really
interested in when Faraday picked up on it. I find it far more interesting
that electric trains were running in 1835 in Vermont. Seems Yankee
ingenuity found something practical for the electric motor to do pretty
darn soon after the principle of the electric motor was rediscovered.
I wonder who was the first to rediscover electroplating as a counterfeiting
tool.

Gary,

Great post. It clears up some mis-conceptions, especially about the time line.
However, I have some points of disagreement.

I don't believe that most viewers subscribe to cable just to be able to pick up
"free" over the air broadcasts. My cable system offers 58 channels. Only
14 of these are over the air pickups, and 6 of these channels are
duplicated as to network content. As far as over the air local content
continuing to hold ground
against DSS, I have access to research which suggests that only 50% of
those who purchase DSS ever bother to put up an outside antenna for the
purpose of receiving local over the air signals. Further, there is a
dropoff in use of local broadcasts of those who do put up the antenna
after the first 6 months. This is a troubling issue in the broadcast
industry. You may be correct that DTV
(and you are right, it may not be the "high" defination TV we were led to
believe it will be) might have some reception benefit that may induce
people to put up that outside antenna, but this is not what we are seeing
with DSS.

Gamble? You bet!

Ya got that right. NTSC works just fine. I'm just a little surprised the
FCC didn't say "let the market decide" like they did with quad stereo, then
let the whole issue die a natural death. One thing is for sure, HDTV will
create a lot of jobs - offshore.

I think it's time to renew my library card.

Gee, Tom, I guess BARF is also affiliated with that other well-known "nazi" "hate group," the Metropolitan Opera Company of New York City.

They have been relentlessly promoting Wagner _for decades_, and doing it _right under the noses_ of the major Jewish organizations also headquartered in New York. What can be done?

All decent hams, and also your group, need to be informed of this "link" to yet another "hate" group. By the way, I suggest that all "researchers" studying the "Wagner conspiracy" click on _this_ link, direct to the BARF affiliates promoting the evil music of this hateful man:

http://www.metopera.org/home.html

Hope this helps.

With all good wishes,

Kevin, WB4AIO

You must be desperate for material O'brien. That stuff
about K1IDF is ancient history. Hey, even if it was true,
and you have absolutely no proof, at least he likes YOUNG
women. Not like the old women you go for with your
mama fixation. How come you are not attracted to
younger women O'brien?

You are a pathetic drug user & pusher who abuses alcohol
when you don't have enough money for drugs. You are
white trash O'brien, you are near 40 & you know with your
8th grade education and your felony drug convictions you
will never come close to earning the money that PROFESSOR
Scott, K1IDF, makes!

So go run to that sewer of a web page where you trash
anyone you hate, which is everyone in the world except
your BARF & Stumpjumper felony friends like KV4FZ,
the three time telecommunications felony loser, like you.

You are disgusting O'brien! You better hang on to that
$6.00 an hour job, at least until they find out about your
felony convictions and your drug and alcohol use.

Hasta La Vista FAILURE, EX-CON!

How many members of the public have you heard even mention HDTV or even less likely, understand its implications and have suggested that they are willing to pay for the small added clarity of picture? (beyond what is now available on DSS). In my experience--exactly none. This is another issue forced onto us just **because it is possible to do it technically**--we don't need it, we don't want it and I don't think the public will be willing to foot the bill. Few people have any idea what it is that Reed Hundt, until lately chairman of the FCC, has foisted upon us. Who convinced him-What faction was it that *sold* Hundt on the idea that this was good for America? What group of leading edge engineers convinced him that this was "Must Have" technology for all of us? More to the point, WHO NEEDS IT?

This whole HDTV scenario plays strikingly like some of the "code in ham radio" issue--Just because better technology is out there, we are led to believe that we all 'must' adopt it ASAP, since not to do so is some kind of technical sacrilege at best, and downright heresy at worst. Our wants and true needs, and certainly what we can, or are willing to pay for, are not even a consideration in the both these issues.

And so the debate now moves on to "slow-code" instead of a more immediate "no-code". I think the time is right to reduce the requirements for the General and Advanced class licenses to 5 WPM. If we fail to do so for the current new solar-cycle, the current new/renew ham numbers in the W5YI report will look much worse in the near future, and the average ham age will rise to mid 60's by the end. I've worked with a ham radio Explorer Post for 7 years, and in the past two years, exactly one ham as upgraded to General or above. The rest consider it a total anachronism of today's Luddites, the Pro-Code group who keep confusing "keeping the code", to "keeping code testing".

But that group had better watch out. If they continue to resist even slow-code on HF, they may find an ugly backlash develop to completely eliminate exclusive code frequencies. Unfortunately, I still hear a lot of "I've got mine" attitude from this group, most of which I'm sad to hear, are from the older generation, which gave us so much technical innovation in the 50's and 60's. It's like they're frozen in time.

Sounds like a great idea to me. If the old toads want the bands all to themselves, let's retaliate by eliminating their "special" code-only frequencies.

> Maybe it is nice to enjoy both.

Amor sezz:
Some of us never left. There are a_lot_of_ham_operators who get on 11m from time to time. You can occasionally identify the 11m hams by the slight difference in terms, lingo, and culture clash. Hearing "you're 5-by-9-plus-10 and we're running 100 watts into a vertical" is a dead giveaway.

The fact is, 11m is a fun and exciting band. 11m DX propagation is instantly apparent. The huge proliferation of SSB users (and mobile activity) from all walks of life make it very interesting.

The intrigue of outbanding also fascinates some operators. It puts a little bit of the fun and excitement back into operating. Many are loathe to admit it to fellow hams, or even their therapist.

Unlike that weird modern liberal commie pinko digital radio stuff you despise - which actually does work better than the old analogue stuff - HDTV and all that goes with it has always sounded more like a marketing ploy to me, a way of getting people to buy more electronic goodies.

People just don't buy picture quality (look at the slow sales of laserdiscs and their paraphernalia, also the slow sales of 16:9 tv sets), which largely negates the allure of HDTV. Modern tv sets last too long. So key people have been persuaded that HDTV is the Next Big Thing, to separate consumers from their money. It's not the first planned technological obsolescence, nor will it be the last, I'm sure.

Whether or not hams adopt digital technology is irrelevant; the real heresy is the way a supposedly technical hobby has its head so firmly buried in the sands of technology.

Mindspring is requesting any and all information on
the convicted drug felon O'brien.
Doc is sending them court documents on O'brien.

Keep up the reports to Harry Smoak at
abuse@mindspring.com

They ARE having an effect, they are now actually
getting ready to kick O'brien off, because of his
terroristic threats and libelous web pages.

A New Jersey attorney has been in contact with Mindspring.
Doc's attorney?

Good Job! Well done to all who have taken action to
rid the net of this white trash convicted drug felon.

I wonder if Professor Scott's , K1IDF, attorney will
sue?

Hi-
I recently began using a Baypac BP-2M multi-mode TNC.
It works, but I am sure that no TNC should be THAT hard to tune in signals and decode them as it seems the Hamcomm v. 3.1 program is which came with the unit.
I am looking for CW, BAUDOT, AMTOR, PACTOR software that is user friendly and/or works well. I suspect the BP-2M can copy as good as the expensive tnc's with the right software.
Any ideas?

Aloha,

Let me attempt to explain why the CW test ought to remain a test
requirement for HF band access.

Amateur radio is not like military, maritime, nor commercial
message/news/etc. communications. Those services which use
the radio/microwave spectrum use commercial/military equipment
of the most costly and modern sort. Amateurs about the world
use from the most primitive to the most modern, and have the
most simple to the most elaborate antenna systems. The
services above mentioned also have the best/use-effective
antenna systems that money can buy -- in particular the
military where cost is no object, the mission is the most
important.

The current international definition of the amateur radio
service (within the extant ITU treaty) contains the
words "international interoperability", and connotes
that any amateur within the global community ought to
be able to communicate with any other. International
goodwill and international support to emergency situations
is absolutely a part of both the present, and that which
is tentatively proposed by the FASC, should the S25
section of the treaty be changed.

Let me review the present situation: re CW as a mandatory
requirement.

The phrase "international inter-operability" appears in an
IARU issued a 26-page report entitled "The Morse Code and
Amateur Radio -- A Summary from the work of the IARU Ad Hoc Committee".
The CW Ad Hoc Committee produced the document for consideration by
the IARU at a meeting in Singapore in September of 1994. The sub-
committee members were Fred Johnson, ZL2AMJ, Director of IARU

Region 3; David Sumner, K1ZZ, IARU Secretariat; and John Allaway, G3FKM, Secretary IARU Region 1.

The report begins with a quotation from Article 1 of the ITU "International radio regulations: "53 Amateur Service: A radiocommunication service for the purpose of self-training, INTERCOMMUNICATION and technical investigations carried out by amateurs,...." {I don't know how to get italics, so I just capitalized the word they put in italics.} The word "intercommunication" in this definition is referred to often and is given a special significance in the Committee's report.

I can't include the entire report here, but a couple of points made near the report beginning will be mentioned:

The report is centered about a list of "Terms of Reference"

"Reference (a) What are the issues involved in the various discussions relative to maintaining or deleting a knowledge of the Morse code as a requirement for an amateur license?"

The report response to reference (a) is to quote RR2375 from the treaty followed by a listing of the issues we all have heard.

"Reference (b) What progress in amateur digital communications and amateur voice communications are likely to affect the future use of Morse by amateurs?"

"Response to (b) " There are three factors that influence a radio amateur's choice of operating mode:

"1. Suitability for the intended communication task.

"2. Cost and availability of equipment.

"3. Personal preference."

These words are followed by a discussion through a few paragraphs, and finally coming to the following:

"With limited exceptions, radio amateurs today do not use Morse code to get important messages through under adverse conditions.

"Today, radio amateurs use Morse code in preference to some other mode for one or more of a number of reasons:

"1. The equipment is simpler and therefore less expensive;

"2. The equipment can be home constructed more easily;

"3. Communication can be achieved with relatively little effective radiated power (a characteristic that some digital systems also posses);

"4. Under certain conditions, such as weak signals or heavy inference, other modes are not feasible or may not be available

to all of the operators; [note this very important point!]

"5. Some propagation media, such as auroral reflection, distort the signal too much for any other mode to be used;

"6. Language barriers can be more easily overcome;

"7. The operator gains personal satisfaction from using this acquired skill; and

"8. Among its enthusiasts, Morse code operation is perceived as more pleasurable, for a wide variety of reasons that are quite subjective, but are nonetheless perfectly valid to the individual.

"Technological advances will have little influence on most of these factors"

End of my quotes from this material.

Now my supporting thoughts:

Radio amateurs, unlike users of commercial and military circuits, do not have equal equipment; in fact our gear ranges from QRP home built CW gear to huge mega-stations with many 100 foot-plus towers supporting stacks of mono banders for every HF band, and sometimes even duplicate towers; e.g. W3LPL in Maryland and others, but we all can intercommunicate, especially on CW.

According to the October issue of QST, page 104, "Today, according to reports from IARU member societies, {the number of licensed radio amateurs, world wide} is approaching 2.8 million amateurs, approximately one-fourth of whom are in the United States.....in Japan, where presently about half of the world's amateurs reside." This in a piece by the same David Sumner, K1ZZ of the above discussed IARU sub-committee and QST publisher and ARRL Executive Vice President and Secretary. This piece is discussing the growth, or lack thereof of amateur population about the globe; it gives counts of hams in a number of Asian and European countries, interesting numbers.

CW is a "language" via the Q-signals and other signals of world-wide interoperability among radio amateurs. English, though attempted by many of the other amateurs beside the one-fourth of us in the US and about 62,000 stations in the United Kingdom plus Australia and New Zealand and parts of South Africa, does not always result in good communications, interoperability.

Or, for some 2 million hams, English is not their native language! On Sept 5th, I attempted an SSB QSO with YO4KCA in Constanta, Romania. It was very difficult for me though signals were 59 both ways. His English pronunciation was

impossible for me to decipher!! The vowel sounds were wrong
and the consonants had both the wrong elocution and attacks!
Bless his heart, he tried desperately to get me to understand,
and, of course I had no knowledge of his language. He knew
English, but could not sound it in such a way that I could
understand it! However, an hour later I heard YO3AC sending
CQ in CW from Bucharest, Romania. We had a short, but enjoyable
QSO, with no language problems whatsoever, though we gave each
other only 579 reports.

If international interoperability, intercommunications among the
hams of the world, is to remain as part of the definition of the
International Amateur Radio Services, as quoted way above at
the beginning of this dissertation, dropping the Morse test
requirement from an HF band operating privilege
test cannot be justified!! The HF bands, by their very nature,
guarantee international exchange of signals, but not international
exchange of information without the recognition and tested ability
to use a universal communication mode that is accessible
to all of the world's radio amateurs. The CW mode is available
to all the world's amateurs, even in the most modest, "little
pistol" station with only a QRP rig, and a simple wire dipole
strung between the trees--this is a station equipped for international
communications on the HF bands, and perhaps, there is no microphone
in sight or owned!!

Thus, because of the desire for international interoperability/emmergeny
service the ITU/IARU and the FCC require that amateurs pass a CW test to
earn HF operating privileges! It is part of the amateur radio
service, internationally.

Aloha and 73 , Jim, KH7M

You mean you actually made it through a complete editorial without
falling asleep?? :>)

If your a long time reader, then you pretty much know what Wayne Green
is about - he does not hide much.

Wayne is one of those rare individuals who you either love or hate, but
you always have to listen to what he has to say. He's a self-motivated
Yankee in the tradition of Linc Hawkes.

I've talked with Wayne on several occasions and found him to be pleasant
and agreeable, albiet a bit intense. He has had his successes and his
failures. Like most self-assured individuals, he believes in himself
and that's always a positive. I've never dealt with him in a business
setting, but I've heard through friends that he's fair, but a bit of a
task master and something of a perfectionist. Like I said, a typical
old-world task master.

I've always enjoyed Wayne's editorials - espiecally when he get wound up
about something - it's enjoyable.

Other than that, I can't say much more.

Take care.

Tom, NM1Q

Not anymore. Most are able to vote, some even to bear arms again.
Federal prison is usually pretty good. The standards are higher, and
the food is better. Most federal prisons now have family visits
with time for sex and a haircut.

The one you want to stay away from, is the Oklahoma City holding
facility. Senator Nichols is here this week trying to figure out
how a prisoner was beaten, head slit open, and blood smeared all
over the walls, was pronounced dead of suicide. The guy was a
petty criminal.

Since more laws are being created every day (mostly contraband laws,
such as Freon, Video Tape Rentals, listening to prohibited frequencies,
etc) most of us will spend time in prison before we die.

Just look at all the crooks in Washington. Most never even were
disbarred.

FYI

Steve

It all depends on your ISP. Many people don't won't get posts from 11/29
for DAYS because of the routes USENET posts are electronically sent.
Some people, OTOH, will generally see them the very next day or (in some
cases), they very next time they check their news.

Like I said, it all depends on your newsfeed.

Wayne spoke at Hamcom in Arlington, Tx several years ago. The talk was
billed
as being on the current state of amateur radio, but as you describe
above,
all he talked about was his music business, his books, and his genius.
Several
people interrupted him to ask him what all that had to do with amateur
radio,
but that didn't slow him down. By the time he was finished almost
everyone
had walked out of the session. He is really full of it.

Being a worldwide ham band dosen't mean it cannot happen, 11 meters was also a worldwide ham band and you see what happend to it. I would not hold my breath waiting for 10 meters to be sold to cb, they are taking it over without purchasing it anyway. Just listen to the lower end of the band when it is open.

Source record: 185412

Hi Kevin
I read your letter and have read similar newsletters. I have been an amateur since I was 16 in 1964. I operated hf during the 60's, then added vhf, as 2 meter fm became popular, then added packet, as it became popular. I have been on the internet for almost 2 years now. As my knowledge of the internet increasd and I learned about websites, I wrote my own website. The address is http://home.sprynet.com/sprynet/lar01/ve3fxq.htm
As with many things I do, that website gets changed and updated technically and informatively as I progress.
I have read many, thousands, of the messages on both rec.radio.amateur.misc and rec.radio.cb yes I even read that newsgroup.
Amateur radio 'is' having its problems. Communications technology is rapidly increasing but, unfortunately, because we amateurs only view it as a hobby, we are not keeping up with the changes. The last change we embraced was packet.
Once we understand the spreadspectrum technology, I think more of us will start to get involved in it, as I believe that s/s will/should have the same impact on amateur radio as vhf/uhf fm did and packet did.
As a result of our reluctance to follow technology more closely we appear to be being left behind. I am not quite sure I agree with that one.

In terms of amateur radio activity, regardless of what frequency you pick as long as you are operating your amateur radio equipment you are promoting this hobby. You may be only one signal in thousands spread across the spectrum but every signal helps the cause. It is like one vote in an election, it does not seem to have any effect but it does.

If you don't like what you hear on the internet don't read it. If you don't like what you hear on high profile amateur frequencies then don't list. I know that sounds over simplistic but it does work.

Don't allow someone or group to negate your positive feelings about amateur radio.

I remember at an amteur display I was at. One of the new amateurs heard someone making abusive noises on the 2 meter radio. He started over to the radio and said that his was of dealing with the situation was to jam the jamme. I looked at him and ask why. He gave me his answer. He was spending lots of time and energy trying to get back at the jammer. When I told him of a simpler method he looked at me strangely. I told him that if the person bothered him to just turn off the radio. If more people ignored the jammer they would realise they were loosing their audience and they would loose interest and go away.

I have finished reading my own message to you and an not quite sure if I stayed on topic. lots of amateurs are dropping out of the hobby because of

the mess being created. You will have to decided for yourself whether you want to stay or not or be adversly affected by all the negativism.

If you decide to stay, why not add some positiveness in your own way. If you use cw make more contacts on cw and help perserve that mode. If you are a voice person do likewise.

You don't have to be influenced by the negativity if you chose not to.

In terms of the garbage on this newsgroups, I don't know why it is here, but, I can read around it I don't have to read it.

Anyways, have a nice day, Larry ve3fxq

Kevin Grant wrote in message <3481667d.1253827@news.agate.net>...

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily those of the Broadcast Officer, the Relay Officers, or of the Society

A.N.A.R.T.S. News Bulletin 986 23rd NOVEMBER 1997

COLS COLUMN

AS I SAID LAST WEEK, THE AVERAGE AGE OF OPERATORS AT THE LARGE COMMUNICATIONS CENTRE I SERVED AT WHILE IN THE RAF IN THE 1950'S WAS AROUND 20 YEARS OLD. THERE WAS MORE THAN A LITTLE SKYLARKING GOING ON AND ONE HAD TO BE ON ONE'S TOES TO NOT BE CAUGHT OUT. THE NCO SUPERVISORY STAFF WERE TOLERANT OF THIS AS LONG AS IT DID NOT GET OF HAND AND AFFECTED THE EFFICIENCY OF THE CENTRE.

YOU WILL RECALL ME SAYING THAT IT TOOK QUITE A LONG WHILE FOR PHONE CONNECTIONS TO BE MADE. A FAVOURITE TRICK WAS TO WAIT UNTIL AN OPERATOR WAS TIRED DURING THE NIGHT SHIFT, SAY ABOUT 3 OR 4 AM. SOMEONE WOULD SHOUT OUT ''PHONE CALL FROM THE MIDDLE EAST FOR THE TRANSMIT OPERATOR ON THAT CIRCUIT''. THE POOR FELLOW OR GIRL WITHOUT THINKING WOULD WALK OVER TO THE PHONE TO BE GREETED BY A RASPBERRY FROM THE OTHER END. HE/SHE SUDDENLY CAUGHT ON AND WOULD WALK BACK TO THEIR OPERATING POSTION WITH EVERYONE LAUGHING.

WE HAD A SECTION KNOWN AS 'SNAGS'. ALL SERVICE (SVC) MESSAGES ADDRESSED TO THE CENTRE CAME HERE FOR ACTION. A TYPICAL MESSAGE MIGHT ASK FOR A REPEAT OF A MESSAGE RECEIVED CORRUPTED OR GARBLED BY THE ADDRESSEE. ANOTHER MESSAGE MAY ASK FOR THE REPEAT OF JUST ONE WORD RECEIVED UNREADABLE. THIS INVOLVED FINDING FROM THE CORRECT PIGEON HOLE THE MONITOR ROLL FOR THAT

PARTICULAR CHANNEL, AND MAYBE UNROLLING HALF A ROLL OF TELETYPE PAPER, AND OF COURSE THERE WOULD BE ABOUT 2 OR 3 HUNDRED ROLLS TO SORT THROUGH TO FIND THE REQUIRED CHANNEL.

AGAIN ABOUT 3 OR 4 AM THE SNAGS OPERATOR WOULD RECEIVE A PHONE CALL AND BE TOLD THAT IT WAS SO AND SO STATION, COULD HE REPEAT A WORD FROM MESSAGE NUMBER SO AND SO ON A SPECIFIED CHANNEL ON A SPECIFIED DATE. AFTER MUCH SORTING OF ROLLS AND UNROLLING OF PAPER HE FOUND THERE WAS NO SUCH MESSAGE. USUALLY THE CALLER WOULD TRY TO SAY HE HAD THE WRONG CHANNEL, AND HAD MEANT CHANNEL 'B' NOT 'A' AND WOULD HE LOOK AGAIN, BUT MOST OPERATORS KNEW THEY HAD BEEN HAD AND THE CALL WAS ONLY ONE MADE ON AN INTERNAL PHONE FROM A 'FRIEND'.

A LARGE MANUAL TELEPHONE EXCHANGE WAS ATTACHED TO THE CENTRE, WITH POSITIONS FOR ABOUT 30 OPERATORS, MAINLY MALE. A 'FRIEND' OF MINE WORKED THERE AND HIS FAVOURITE EXPRESSIONS WERE 'RUBBER KNEES", FOR 'NUMBER PLEASE' AND 'DYING TO DISENFECT YOU' FOR 'TRYING TO CONNECT YOU'. IMAGINE HIS SURPRISE WHEN THE WING COMMANDER C.O. ANSWERED WITH 'I WOULD LOVE TO DISENFECT YOU TOO'. NEEDLESS TO SAY MY FRIEND CUT OUT THE FUNNY TALK DURING NORMAL OFFICE HOURS.

WELL THATS ALL AGEN FOR THIS WEEK, NEXT WEEK WE RETURN TO THE 'EARLY COMMUNICATIONS' SERIES. 73S FOR NOW DE COL VK2CTD...

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT 14-28 NOV

SUMMARY
Date 14 15 16 17 18 19 20
10cm 93 96 96 94 92 99 89
A 8 10 9 9 11 4 (5)
T 52 8 16 46 31 35 64

SOLAR ACTIVITY WAS VERY LOW ON 16TH, 18TH, AND 20TH NOVEMBER; LOW ON 14TH, 17TH, AND 19TH; AND MODERATE ON 15TH, WITH AN M1 FLARE.

GEOMAGNETIC ACTIVITY AT LEARMONTH (W.A) WAS QUIET 15TH, 19TH TO 20TH; QUIET TO UNSETTLED 16TH TO 17TH; UNSETTLED ON 14TH; AND UNSETTLED TO ACTIVE ON 18TH.

MAXIMUM USABLE FREQUENCIES DURING THE PERIOD WERE MOSTLY NEAR PREDICTED VALUES, WITH DEPRESSED PERIODS TO 10 PER CENT ON 16TH, AND TO 15 PER CENT ON 15TH. FREQUENCIES WERE ENHANCED TO 30 PER CENT TO 0600UT ON 17TH.

FORECAST 21-27 NOV

SOLAR: LOW 21-23 NOV.; VERY LOW: 24-27 NOV.

GEOMAGNETIC: UNSETTLED TO ACTIVE: 21-24 NOV.
QUIET TO UNSETTLED: 25-27 NOV.

FREQUENCIES: MOSTLY NEAR PREDICTED MONTHLY VALUES: 21-27 NOV.

COURTESY OF IPS RADIO AND SPACE SERVICES

VK2SG RTTY DX NOTES FOR WEEKENDING NOV 14, 1997 (BID RTDX1114)

NOTE OF INTEREST:

ST. BRANDON, 3B7. Dov Gavish, 4X4DX advise that he is going with a group to this rare spot in May 1998 (mark ur calendar). Call will be 3B7AZ and 3B7/HB9JAI.

IVORY COAST, TU. Didier, TU5EX inform that he is ready for skeds on RTTY mode on all bands. To make an arrangement send an ax25 message tu5ex at tu5ex.civ.af during the week for take a sked for the SUNDAY (only).

TOGO, 5V. Roger, G3SXW with other ten hams will be active as 5V7A during the CQ WW CW test (Nov. 27-28th). From the Contest till Dec 4th the team will operate also on the WARC band. They will also made operation on RTTY.

The VK2SG RTTY DXNOTES are also available on Internet at reflector digital-dx at st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/rtty.html

For next week's bulletin send your bandpass to Bob, W2JGR at W5KSI.(hash)NOLA.LA.USA.NA or e-mail: w2jgr at millcomm.com

Gl de (DX2) Luciano, I5FLN

ARLD048 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The Daily DX, QRZ DX, G4BUE, DXNL and Contest Corral from QST. Thanks to all.

CROATIA, 9A. The Croatian Radio Club station is celebrating its 20th anniversary until Dec 31, using the special callsign 9A20D. Activity takes place on 80 to 10 meters using CW and SSB. QSL via 9A1CRD.

UNITED ARAB EMIRATES, A6. David, K3LP, and Rich, KE3Q, will be QRV in Dubai beginning Nov 22 from the QTH of A61AJ. They will also participate in the CQ WW CW Contest. QSL via W3UR.

IRAN, EP. Ali has been QRV as EP2MKO on 10 meters around 0745z. QSL via UA6HCW.

MAYOTTE, FH. DJ1RL and DK8FB will be QRV as FH/homecalls until Nov 28. QSL to home calls.

SOUTH KOREA, HL. DS5USH and DS5RNM has been QRV on 80 meters around 1200z. QSL via operator's instructions.

DJIBOUTI, J2. Dominique, J28DB, will be QRV for three years. QSL via F4AAQ.

SOUTH SHETLAND ISLANDS. Danny has been QRV as LZ0L on 40 and 20 meters. QSL via LZ1KCP.

GREENLAND, OX. Kim, OX3FV, is active using CW on 160 meters and the newer bands. Meanwhile, Joergen, OZ8AE, is QRV as OX/OZ8AE until December 1. Look for OX3FV and OZ8AE to be QRV as OX3FV in the CQ WW CW Contest. QSL both calls via their respective bureaus.

BANGLADESH, S2. S21YG has been QRV on 15 meters around 0900z and 40 meters around 2000z. QSL via operator's instructions.

BOSNIA, T9. Cedric, F1PSR, is QRV as T98PSR from Sarajevo until the beginning of March, 1998. Look for SSB activity on 160 to 2 meters. Some satellite and packet activity is expected. QSL via F5WN.

CAMEROON, TJ. Phillipe is QRV as TJ1HP. QSL via F6FNU.

ANTARCTICA. VU2JBK is QRV from the Indian Maitri Station in Queen Maud Land. QSL via VU2DVC.

The Ohio/Penn Dx PacketCluster DX Bulletin No. 331

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH and The 59(9) DXReport, W3UR and The Daily DX, K5IDX, NT5C, K8RF, WA8JOC, K9FD, EA3KU, F6AJA, G3OZF, G3VMW, G4BUE and DX News Sheet, HJ3PXA, JA1ELY, LU2BRG, SP3LFV, TG9IKE, VK4AAR and ZP5AZL for the following DX information.

5A, LIBYA. Remember that the RRDXA German group should be active this weekend (Nov 23rd through Dec 4th) as 5A7A.

Activity will include the CQWW CW Contest as a Multi/Single entry from the 5A1A station. QSL via DL3KDV.

9G, GHANA (Update). The DXpedition to 9G by G3VMW, G4RWD and G4ZVJ has been reported to be on schedule and to begin on Nov 21st and last through Dec 2nd. Their operation will include a Multi-Single entry in the CQWW CW Contest as 9G5VJ. Outside the contest they will concentrate on 160, 80 meters and the WARC bands using their own personal callsigns (9G5SW/G3VMW, 9G5WD/G4RWD & 9G5VJ/G4ZVJ). Please QSL via their home calls.

9M2, PANGKOR ISLAND (West Malaysia). Don, G3OZF, will be operating as 9M2/G3OZF from AS-072, Pulau Pangkor, from Nov 24th to Dec 2nd. Activity will be from 80-10 meters (possibly 160, but unlikely), with the emphasis on CW, but some SSB on 40/20/15/10 meters. He will be in CQWW CW Contest for the weekend of Nov 29-30th. QSL to home call.

DX1, PHILIPPINES. Look for operators JA1KJK, JA1WLL, JK1CWR, JE8IVF and 9V1ZW to be active and a participant in CQWW CW Contest from here as DX1HB and as a Multi/Single entry. They will active on 160-10 meters and RTTY for a few days before the contest. QSL via JA1KJK.

ER, MOLDAVA. 'The 59(9) DXReport' states that Slawa, ER1LW, is active on weekends on 10104, 18072 and 24895 kHz CW, and 18130 and 24945 kHz SSB. He has also been active on RTTY. He has an EMail at er1lw at cinf.usm.md

VK9L, LORD HOWE ISLAND (DXpedition Update/Reminder). Just a quick reminder that the VK9LX operation begins this weekend (Nov 23rd to Dec 1st). They will be operating Multi/Single in the CQWW CW Contest during the following weekend. They plan to run two stations before the contest as much as possible.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

Email address for the Broadcast Officer is : patl(at)conmusic.usyd.edu.au or patl(at)mail.users.usyd.edu.au

If you take a plain, 8 1/2 X 11 inch, white piece of paper, put a solid black
dot on it about a half inch in diameter, and show it to people, what do you
think is the first thing they'll notice when they look at the paper?
Furthermore, what will their eyes be drawn to when they try to look at the
rest of the paper?

I agree. If it is a violation of the regulations to let non-hams learn first hand about the hobby by operating under a licenced amateurs supervision, then we should start cleaning it up right now.

... and let's start at the top !

On page 16 of the September, 1997 The Canadian Amateur (TCA), it is written that "Her Majesty Queen Elizabeth II transmitted a brief message via Amateur Radio to the people of the UK". It is obvious from the article that Her Royal Highness was not a licenced operator because the article states that this was 'the first known time that a reigning British monarch has transmitted on the Amateur Radio bands'

The evidence is all in that article; the date, the time, the location, the amateurs who participated in the perpetration of the alleged violation, etc. There is no evidence anywhere in the article to indicate that a Ministerial exemption was granted ! (I don't think the Radio Act would allow such an exemption anyway.)

Of course, it is not illegal to let Her Majesty or anyone else participate in the operation of the station so no contravention of the regulations existed.

>73 Doug

The HDTV transmissions will not be at the cost of elimination
of regular TV channels. There will be a period of time (10
years) when both types of signals will be available. In that
time, it is very unlikly that most (not all, but most) people will
have migrated to HDTV by purchasing at least one HDTV set.

In article <34818FB2.2C0F3C4A@ibm.net>, "Roger, W6VZV" <rogerjb@ibm.net>
writes:

>It would make me very happy if all of those on this
newsgroup threatening
>litigation would simply quit doing
it. Even the largely empty threats that I
>have seen on this
forum relating to litigation (I doubt very much that
>those
who make these threats have the money or the willpower to
actually file
>a lawsuit) are very bad for the forum. For
example, because of such threats,
>I know for a fact that
many employers forbid employees from acessing usenet
>from
work, or from work e-mail addresses. This is not
desireable.

Roger:

You're absolutely correct. I, for one, have virtually unlimited resources
of a legal nature, and I have never, in my life, considered filing a
lawsuit against anyone, for any reason! And the only person who would
even hint at filing a lawsuit for something said in this public forum is
the worst kind of loser! I won't mention any names out of sheer
terror at the thought of another threat of a lawsuit, but I am no longer
communicating with two frequent users of this newsgroup for that
very reason!

I suggest
>that those who can't participate in discussions
without making such threats
>should simply not participate.
Period. And the rest of us should refuse to
>exchange posts
with those who do make such threats.

Just a
>thought/suggestion.

Excellent advice!

the monarchs simply get the communication authority to issue
them a license.
pretty cool huh

ie...the canadian lady and the queen of england's cerimonial
conversation commemerating the first transatlantic communication
and
king hussein
and
numerous greek,south american,african,russian, and you name it
country officials

> hams as criminals. It's over folks. Turn out the lights the party is
> over.

It started with the Bash books in the 70s. Not that it was easier
but how hams reacted to the books. I started in 1959. Thru the 60s
and early 70s, amateur was friendly. But with the Bash books and
CB in the late 70s, hams became scared. We shut off outsiders. Too
many hams in my community do not want anyone in the hobby that they
did not personally ask to be a ham.

Most of the trouble makers in ham radio today have Extra and Advanced
class licenses. I remember folks in the late 70s acting as if their
Extra class license gave them the same status as a Ph.d in EE. Look
at the hate directed at No-Code techs. I recently was in the South
Bend Ind. area. They had a ham, an electronics genius, who jammed the
local repeater system. He even bought a TV, modified it to jam the
repeater and returned it for a refund. Everytime the new owner turned
it on, it jammed the repeater. This is no CBer, some uneducated slob.

Has come to the place that just having knowledge is dangerous? Are
Americans so insecure that we will do anything, including limiting
what others can learn, so that we can feel that we are better than
those lesser? Is this not what environmentalism, control gun and
so much other crap in our society is about?

Why *buy* anything. Why not just continue along your path of crime and steal the amplifier. That way if it doesn't work, you won't be out anything! That's the nice thing about being a pirate, you get to play at the expense of others(real broadcast stations who pay big money for a license to use the public airwaves).

Hitler had the same views and we had to crush him!
Thoughts on the "Great Liberty Net"

They call themselves the great liberty net, that is at best a gross misnomer.

The only "liberties" I've heard are those taken to abuse their first ammendment rights.

They are quick to condem those who oppose them as "Filthy jammers trying to deny our right of free speech". They forget that with rights goes responsibility. Responsibility for Truth, Facts, Accuracy, Fairness and Decency. Responsibilities long unused by the liberty net that they have become oblivious to them.

The use of inuendo, implication, guilt by association and just plain irresponsible gossip completely overwhelms what truth may exist in the subjects discussed.

The "Great Liberty Net" has evolved into the "Great Infamy Net".

They are the "Paperatzi" of Amateur Radio, with credibility to match.

If they could hear themselves as others hear them, they would realize they have become a Cult. A Cult of perceived conspiracies and intrigue, complete with a High Priest and all his little pretenders that nod their heads and chant Da Da, Da Da.

God help anyone who comes on the frequency and expresses hope and faith in the future of the country. Such blaspheme against cult dogma must be immediately attacked by the faithful and the offender ran off the frequency and dispatched to the pits of politically correct hell.

The sadness and danger of this incessant paranoia and destructive cynicism is that it attacks the faith, hope and moral of the entire nation just as surely as a cancer attacks a healthy body.

As with any cancer it must be confronted and fought and finally defeated.

The jamming of the "Liberty Net" is much more than simple jamming. It is a torrent of outrage against the malignant offal put forth by bitter old wanna-be Anarchists who so arragonantly call themselves "The Great Liberty Net".

Lenin would be proud of you

.... Just see you for what you are.

Find a clear frquency and all is solved, but the won,t Hate and discontent is what drives these people. Just go see for yourself at: http://www.bcpl.lib.md.us/~rfrankli/hatedir.htm The liberty net is listed here! And their organization is: http://www.usaor.net/users/ipm/

I had a dog . This was his opinion:
Liberty Net PISS ON IT!!!!!

Sorry, but you are incorrect regarding the Indiana jammer(s) and the TV
set incident.

The incident did tale place, but neither of the two people involved
were hams. Both told the police that they did it because they hated
hams. Its was reported in their local news and we also reported it on
Newsline. The set was purchased from, and returned to Wal Mart. That
is one of the leads that uncovered their identity.

As a post-script the FCC has informed the ham community it will NOT
proceed against the pair because it was not an ARL Amateur Auxilliary
T-Hunt Team that located them. This too we reported on Newsline.

And I agree with all else you say, except it started far earlier than Dick Bash. I remember that same introverted approach back in the late 1950's. I also remember the words intoned by a certain well known ham who hated newbies like I was in '59:

"No kids. No lids. No space cadettes. The school bus does not stop on my frequency."

Anyone else remember him?

de Bill Pasternak, WA6ITF / Newsline

"So long and thanks for all the fish."

Source record: 185458

I'm creating a chart of the amateur bands with info (bandplan,
max power, baud rate, etc), and I have a few holes:

1) Is the maximum power on 160m, 75m, 20m, 17m and 12m
200 W, PEP?

2) Is the maximum power on 6m, 70cm, and 33cm 1500 W, PEP?

3) Is phone on 17m USB?

4) Does RTTY and data on 30m use the entire bandwidth?

5) On the 33cm band and above, is the maximum data transfer
rate 56 kb, and the FSK maximum shift 100 kHz?

Thanks,

Pete.

Probably Her Majesty was 'participating' in the operation of the amateur radio station under proper supervision (paraphrased from RIC 25, 43(1)). Seems Masa ignores this portion of the Canadian regulations (to try to prove his point)

>>
>>Tom, VE3TEG
>
>
>many kids and monarches do use ham radios without license.
>
>this often happens in european countries.

Oh come now, Masa... You are seeming ignoring RIC 25, 43(1) that allows 'any person' (which one could assume Queen Elizabeth II is) to 'participate in the operation of an amateur radio station' under the supervision of a properly licensed operator (paraphrased from RIC 25, 43(1)). If she was indeed under the supervision of a licensed operator (RIC 25, 42), she was in no way operating illegally under RIC 25, 43(1). Masa, you might explain RIC 25, 43(1) rather than harping on RIC 25, 43(2).

O'brien has been kicked off of Bellsouth.net and
radia1.com for his terroristic behavior.

Complain to Harry Smoak at abuse@mindspring.com
about him. They have a file open on him and will
kick him off of mindspring, if a few more people complain.

Read the tantrum that O'brien threw on his web, after
radia1.com kickedhim off the internet.

They're holding your room open for you at the
Paulding County jail O'brien. Three time loser,
convicted on three counts of violating the Georgia
Controlled Substance Act.

O'brien has been kicked off of Bellsouth.net and
radia1.com for his terroristic behavior and threatening
e-mail. Go to his web page and look at the tantrum
he threw at radia1.com after they kicked him off
the internet.

To complain about O'brien, contact Harry Smoak at
abuse@mindspring.com they have an open file
on him and only need a few more complaints to throw
him off Mindspring.

Go to O'brien's old web page on radia1.com and see
the apology radia1.com had to issue to the internet
community for his terroristic behavior.
http://www.radia1.com/pms21/

You are a three time loser O'brien and they are holding
a room for you at the Paulding County jail.

I agree that HDTV is NOT necessary and is being forced down our throats. BUT don't blame the broadcasters. They are as upset about HDTV as most people when the average person learns of the expense of replacement equipment for the home.

You CAN blame the FCC. The Commission has ramed this technology down everyones throat. There are many TV broadcasters in samller markets that can not afford to make the conversion either.

Do you think the public will stand still for losing the small communities local TV service because the stations can not afford to make the conversion to HDTV either. Think about it then write to the FCC and your Senators and Congressmen.

As everyone can see, I asked Mr. O'Brien a direct and simple question about a post he made. WB2OTK is a troublemaker to be sure. He deserves to have his license revoked. But instead of simply saying that Rich is a filthmongerer, Mr. O'Brien pointed out that he was a *Jewish* filthmongerer as well. I have repeatedly asked Mr. O'Brien why he felt the need to point out someone's religion. He has refered me to web pages about everyone else, and has begun to attack me, simply because I want a direct answer as to why he felt the need to point out the religious belief of someone who was causing him trouble. Again, I asked a direct question as posted above. Below is the response that I got.

>Yep,heard you qrm'ing 3894.5 tonight. I wonder what is in your past?

4-GE MPD/MPA Public Safety Mikes

Part #198801586P2 New in box. List price is $195. Here only $40 + COD shipping or MO in advance and save the COD charge.

Have 4 pcs. all in box.

With this mike you move the antenna from the radio to the top of the speaker mike. You attach the plug to the radio and you can transmit with the radio on your belt.

1-GE MPD/MPA Surveillance mike/earphone

Surveillance mike/earphone combo like the Secret Service uses. Mike and switch clip to your shirt. GE lists for $165, here $50. New.

1-GE MPD/MPA Starndard Charger

Part #19B801506P11 Standard Charger. Excellent Condition. $25 + Fedex COD shipping from Boston.

---

2 GE MPI HT UHF crystal radios
2 channel radios on different frequencies. 2 batteries, 2 antennas and one standard rate charge unit for 1 radio and one battery.

Good condition.

$60 + COD from Boston.
Thanks for reading this!!

3-Aerotron radios in VHF-Hi Range. There are 2-2 channel radios and 1-one channel radio. They all talk to each other on 154.xxx. The two freq. radios have only the one channel in them. They were working fine when taken out of service this year. They have the plugs for power and come with the microphones. $175 + COD shipping for all 3.

Kustom X band radar unit. Good condition. Does stationary and moving car detection. Has 1 large antenna/window mount for inside or outside detecting. Dash unit has one or two small cracks in the leather case and one segment of 1 eight segment speed digit does not work. However it is obvious what the speed is. Comes with tuning fork and Calibration certificate from Kustom. $200 + COd shipping.

4-motorola radios.

3-MX 360's Model #H35AAU515OAN 800mhz radios/receive frequencies of 860.88750,859.88750,858.88750FS,857.88750,856.88750. Radios are cosmetically ok but etched ID on faceplates. Condition of transmitters is unknown.

1-mx310 model #H24AAB3110A uhf 1 channel unit
with tx frequency of 465.775 and receive of 460.775. PL tone 2A. This radio is in good condition although has ID etched on front panel. Transmit and receive is fine.

5-batteries although 4 are shot and 5th isn't very good. Antennas for the UHF and 2 for the 800 mhz. 1 mx speaker mike. 3 plastic holsters. $75 for all + COD shipping.

1-Kenwood UT-50 6 meter module for Kenwood 742 radio - $275 + COD shipping

---

1-Kenwood UT-220 220mhz module for Kenwood 742 radio - $275 + COD shipping

---

1-Astron RS-20 amp. 1 year old. Used to power Kenwood 742@11 amps. VG condition - $90 + COD shipping.

I will answer your question:
The Radio Shack Power Amp requires more drive than your FM-10 can supply. Check out MYCAL's web page for a more suitable one that will boost the FM-10 to something of your liking. Try this one...
http://fov1.fov.uni-mb.si/~ufopra374a/index.html
or this one...
http://www.paranoia.com/~filipg/HTML/LINK/F_FM10.html

friend,
Lute

Thank you for overwhelming responses for Masa's Web Site,
RadioTelephone.Net, Amateur Radio and Scanner Division.

http://www.radiotelephone.net/amateur/

There are new things on the web site (effective today):

- World Wide Call Sign Directory (Search everything from one
page !!)

- New PDF formatted (previously .doc formatted) Study Guide
for Canadian Amateur Radio Basic License

- Cordless Phone and PCS Phone Scanning Guide (frequencies)

- What's new ? (IC Canada Update etc., link to IC Canada's
web site)

- Montreal Area Repeater Directory (including hidden illegal
repeaters.) There is also a link to a page where you see all VE2 and
VA2 (the province of Quebec) repeaters.

- Amateur Radio Basic Qualification Study Guide (online full
version)

- General Information Sheet for Amateurs and Pros

- Amateur Radio Freqs and Countries concerned

- US Amateur Radio Exam Page

- Ham frequencies and British Columbia Frequencies

- Ham calling frequencies

- Ham license structure worldwide (Canada, US, Japan,
Australia, New Zealand... and there are links that help you to
obtain the Australian and New Zealanders license while you stay there
!!)

- US Frequency Band Allocations (for each license)

- Amateur Radio Satellite Frequencies

- Space Station MIR Information Centre

- Amateur Radio Station Prefixes

- Royal Canadian Mounted POLICE 10 codes & International Q
code list

- International Morse Code

- CB Information Desk

- International Air & Marine Frequencies

- Propagation General Information Centre

- HF Propagation PREDICTION online

- RS Scanner Info

- ADI's AT-600 Dual Band Information

- Cellular Phone Listening Centre (Cordless Phone will be
added soon !!)

- Radio Modification Centre

- VE7JPN & VA2QRU Station Equipments

Interseting news article on television and in the paper. In an effort to reduce military costs, there is a faction within the military advocating the increased use of HIGH-TECH pilotless drones for surveillance. At a cost of a few $100,000 vs several million, it seems like a good idea. HOWEVER, there is a small VOCAL minority within the pentagon that is resisting this change. Their contention..."Since man first took to the air, there have been pilots at the controls, why change now for the sake of change? Wonder if they've been reading these newsgroups?

I have every issue of 73 from number 2 up until 1984 and many scattered issues since that time. I can not say that I have read everything Wayne has ever written but I think I have read most of his original stuff. Unfortunately, he tended to repeat his previous stuff a lot in later years. Of course, if your are trying to get a message out, I guess that is what you do.

IMHO Wayne was a visionary in the 60s through the early and mid 70s. I believe many of his predictions as regards to Ham Radio have come to pass and if the service had followed some of the ideas he illustrated in the 60s and 70s, it might be better off today. I have met Wayne on three different occassions at Hamfests and Conventions and I have to admit that he is the consumate salesman.

As someone else posted, you either love or hate him. I have not met many who have read his stuff and came away neutral. In recent years he seems to have gotten a bit paranoid (the supression of the AIDS cure, The IRS, etc.) and I think he was always in some awe of the ARRL and the power he abscribed to it.
I think his best of most accurate prediction was the effect that Incentive Licensing was going to have on Ham radio. It is almost haunting to read these predictions from the early and middle 60s and then track the course of ham radio up through the 70s.

Wayne was able to tap into the general unrest, rebellion and counterculture activities of the mid 60s to early 70s and I think that is where he built the small power base he had. I think his thinking was more inclusive than exclusive and I really believe that he had the best interests of ham radio at heart. I do not know if he is active on the net

or reads this newsgroup, but it would be interesting to hear from him.

I've met him a few times at Dayton. One time he was handing out buttons
that had his picture one them, that said "I Love Wayne" or "I Hate
Wayne". I wore one of each. I told him I didn't agree with most of his
editorials, but liked his mag, etc. He seemed like a nice gent. On the
other hand, some of the other "Ham" personalities I've talked to at
Dayton were real assholes.

Point your browser at http://www.hal-pc.org/~bvarc/houfreq.htm
Several repeaters are in Conroe, many repeaters in Houston. Conroe is heavily wooded in areas, and on the fringe to get into the Houston repeaters - a ducky on an HT usually won't do it. I'd suggest bringing a twin lead roll-up J pole with you.
Hope to hear you!

Source record: 185282

Wow !!!

I am studying to get my HAM license after many years of "thinking about it".

I can't believe all the bickering on here about licenses and CW vs. No CW. There must be a happy medium. A compromise. A way to live together. I thought that was what Amateur Radio was all about!

The new license requirements (No Code Technician) offer a way for many people to get licensed and into amateur radio who may never have done so in the past. This is not a bad thing and must be good for amateur radio in the long run. Personally, I am taking the Technician Class license test and the 5 WPM code test. I think CW is a good thing for those who want to use it. Television would be pretty boring if there was nothing on but soap opera's. Variety is a good thing. Something for everyone.

I enjoyed the message from a HAM who seems to believe that the electronic knowledge to build equipment should still be required. I don't need to know how to repair my car to be a good driver, and I don't need to know how to build a radio rig to use it responsibly, but if building is your thing, enjoy it. Builders have advanced the science and technical aspects for all of us who enjoy radio. I salute you, but I don't care to get into the nuts and bolts. I am a software engineer, but I do not think all people who use computers should know the technical side of the hardware, or software as I do.

There is a place in amateur radio for everyone who passes the license examination and acts responsibly. I hope we can all represent amateur radio in such a way that makes it appealing to persons from all walks of like and socio-economic backgrounds.

Well, I've said my two cents worth. I still look forward to getting my ticket and continuing my education in amateur radio. Thank you for all the help and time you provide to newbies like me through the internet and local clubs and associations world wide.

Gary Hawkins

I keep waiting for some connection to amateur radio equipment or policy
in this thread.

Sorry Old Boy....You DIDN'T HAVE to be an ARRL member to
participate in the survey. The survey was done to get input from
the amateur community at large. They even sent surveys to
random names out of the fcc database to get an accurate
assessment. The ARRL has done ALOT of fine things for
amateur radio.......Every ham certainly is not a member of
the ARRL but a VERY LARGE percentage agree with and
support them. Without the ARRL we would have NOTHING.....
If you don't like the code, 11 meters is the answer....you
don't have to worry about the ARRL or CODE ....just what you guys
want. With sunspots coming back you can soon work the world on
HF.
Hope you listened in on the CW bands last weekend...
WALL TO WALL CW SIGNALS......Its a very popular mode.

This viewpoint is problematical because it justifies not just the retention, but continued government support in maintaining modes of communications and technologies used in the amateur service that have been abandoned by other services. Such a refusal to acknowledge the state of the art in other services is unacceptable because it would imply that amateur radio is a radiocommunication service that exists in spite of these other services, rather than with them. If there are individuals who prefer to use Morse code, for whatever reason, they are heartily invited to do so. For that matter, they are quite justified in encouraging other amateurs to use that mode and develop a similar preference, even if they have indeed been abandoned by other services.

However, it is objectionable to go beyond that preference and use it as a justification to continue Morse code testing. It is not the use of a mode which justifies testing, but its potential for interference. The point in fact is that it is the on-off keying of a transmitter which has the potential for causing the interference and not the encoding scheme of those pulses which causes the interference. Moreover, if that misadjusted on-off keyed transmitter is causing interference, there is a likelyhood that such interference may be experienced by stations in services other than in the amateur service.

Morse code testing is not justified because the application of that encoding scheme to on-off keying is not the interfering mechanism, it is the on-off keying that is the concern. That being the case, there is little doubt that the government is justified that individuals must have a knowledge of the the characteristics and problems that may be encountered of an OOK transmitter. To reiterate, Morse code testing is not justified because it has no bearing on satisfying the government's legitimate concerns with the mitigation of interference.

> The current international definition of the amateur radio
> service (within the extant ITU treaty) contains the
> words "international interoperability",

This statement is untrue. The current definition for the amateur service in the ITU regulations within the ITU treaty states as follows:

Amateur Service: A radiocommunication service for the purpose of self-training, intercommunication and technical investications carried out by amateurs, that is, by duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest.

As everyone can see, there is no concept whatsoever in the international definition fo "international inter-operability"; that concept was introduced in the report that was issued from the IARU conference in Singapore in 1994. If I may be so blunt, the use of that term as a means of justifying Morse code testing, is, in my estimation, a panacea by some desparate amateurs, in an international forum, attempting to justify Morse code testing in the face of changing technology and the application of acceptable spectrum management techniques.

I would be pleased if Reid would be good enough to acknowledge at the very least that his statement 'The current international definition of the amateur radio service (within the extant ITU treaty) contains the words "international interoperability",' is, at the very least, misleading, if not untruthful. Indeed, I would be pleased if he would also acknowledge at the same time that the source of that is only from within the amateur service, and is not based in any policy or regulatory documents from a national or international government body.

> and connotes
> that any amateur within the global community ought to
> be able to communicate with any other.

This connotation in the report accentuates the misleading nature of the term of "international inter-operability". This statement purports that there any amateur within the global community ought to be able to communicate with any other and that this concept is the policy of the ITU. (As a side commentary, would any of the authors be able to explain what is an amateur within the non-global community? The term "any amateur within the global community" is redundant and is bafflegab.) As I have shown above, the foundation of the statement, i.e. "international inter-operability", is not embodied in the ITU Radio Regulations, or any other national regulations, for that matter. The only place where "international inter-operability" is mentioned is in a report issued by amateurs. It is deplorable that Reid would elevate a notion, authored by amateurs, to the status of an international policy or regulation.

Furthermore, the above quoted statement from Reid infers that the only means of international communications is via Morse code. Nothing could be further from the truth. Any mode can used for international communications that is available to the amateur. Which mode should be left to the individual's choice.

> International
> goodwill and international support to emergency situations

> committee members were Fred Johnson, ZL2AMJ, Director of IARU
> Region 3; David Sumner, K1ZZ, IARU Secretariat; and John Allaway,
> G3FKM, Secretary IARU Region 1.
>

To be clear on this point, the phrase "international inter-operability" does not just appear in the IARU report as Reid would have us believe. No, it originated in that report, and is not extracted from any other national or international document. In other words, this is the opinion of a number of amateurs, and they are entitled to that opinion either as a group or severally. But they, like many others, failed to address the relationship between Morse code testing and the government's legitimate concerns of managing the radio frequency spectrum. Indeed, it would seem the that concept of "international inter-operability" is a notion of desparation because indeed Morse code testing is not justified with respect to the

legitimate concerns of our respective administrations.

> The report begins with a quotation from Article 1 of the ITU "Inter-
> national radio regulations: "53 Amateur Service: A radiocommunication

> in italics.} The word "intercommunication" in this definition is
> referred to often and is given a special significance in the
> Committee's report.
>

Yes, and this is one of the report's downfall; it concentrates on one of the purposes of the amateur service to the exclusion of all the others. Moreover, the thrust of that concentration is entirely unjustified, as we shall see.

> I can't include the entire report here, but a couple of points made
> near the report beginning will be mentioned:
>
> The report is centered about a list of "Terms of Reference"

> of Morse by amateurs?"
>
> "Response to (b) " There are three factors that influence a radio
> amateur's choice of operating mode:
>
> "1. Suitability for the intended communication task.
>
> "2. Cost and availability of equipment.
>
> "3. Personal preference."
>

This is another error of the IARU report. It makes the error of playing off one mode with another. It is incorrect to attempt to justify any mode based on its comparative merits to other ones. The attempt is incorrect because the issue for discussion is the legitimacy of Morse code testing in order to determine operator competency. Operator competency is independent of the

relative merits of one mode with respect to another. But to compound the incorrect comparison, Reid further claims that the use of advanced technologies as used by other services should have no bearing with the debate of the relative merits of the use of Morse code in the amateur service because of the differing missions. In other words, let's compare Morse code with other modes, but we are not allowed to use the advantages that are inherent in other modes used in other services because their missions are different that that of the amateur service.

There are only two responses to that notion. First, as our esteemed collegue Moore has recently pointed out, this is not a debate of mode versus mode. Whenever the debate deviates to this discussion, it never gets resolved because it degenerates into a bun fight with no discernable conclusion. Second, it is no wonder that such comparisons between Morse code and other technologies will result in a judgement that Morse code is superior when the evidence of advantages of other modes used in other services, as well as the amateur service, are deemed to be out of order. That is called "cooking the books", that is to say, the evidence is skewed in a manner in order to obtain a desired outcome.

> End of my quotes from this material.
>

Those may be very good reasons to use Morse code, but how does any of those reasons have any bearing on the legitimacy of Morse code testing? Point in fact is that there are many who undertake international radiocommunications, such as myself, never using Morse code. Indeed, with some of the technologies that I use, I can communicate in circumstances which render Morse code ineffective. (Oh yeah, I forgot, those modes are used by other services, so according to Reid, are not allowed for consideration.) The report's conclusion to the supposed list of advantages of CW operation is that amateurs must know the Morse code in order to maintain a common mode of communications with other stations in location beyond my nation.

The only acceptable response to that report is bullshit. (I try to the greatest extent from using English expletives, but there are times when my patience is tried. My apologies to those who are offended.)

Quite frankly, if I wish to communicate with someone beyond my borders, I will do it in a mode that pleases me, that is my choice. If that mode happens not to be Morse code, that is my choice. If my chosen mode is one that amateurs in the Central African Republic cannot afford to have, that is my choice. If the only means of communicating with amateurs in the Central African Republic is via Morse code, and I do not wish to communicate with them in Morse code, that is my choice. However, I defy anyone to justify that individuals must submit to a Morse code test because amateurs in the Central African Republic are limited to that mode due to their lack of economic resources to use other modes.

As a result, the report which confirms Morse code testing as sponsored by Messers. Johnson, ZL2AMJ, Sumner, K1ZZ, and Allaway, G3FKM is as insulting as it is paternalistic. They concluded to maintain Morse code testing even if it impinges upon my freedom of choice is justified on economic circumstances of another individual. My QSL cards confirming that I have communicated with 265 DXCC countries is evidence enough that this conclusion is worthless.

If the justification Morse code testing is based on economic reasons, such as the lack of availability of equipment, then let those administrations whose citizenry are economically deprived continue to use that reason for justification. (As an aside, most of those amateurs who reside in countries that we might judge as being econcomically deprived are usually the economically advantaged class regardless of the status of the country as a whole. Those who are not in that class are usually concerned with day to day existence, and access to amateur frequencies isn't even a consideration.) In the meantime, that in no way justifies my government to demand that Canadians (or any other nationality for that matter) who wish to operate on the amateur

allocations below 30 MHz must demonstrate a knowledge of Morse code just because an amateur in the Third World is only able to afford a cheap CW-only transmitter. Even if some of my fellow Canadians are limited to a cheap CW-only transmitter, that in no way justifies the government demand that all of us have to take a Morse code test. What is continually forgotten in the debate that Morse code testing is not legitimate because it is irrelevant to the government's legitimate concerns for the mitigation of interence among users of the radio frequency spectryum.

CW IS NOT A LANGUAGE, the opinions of those who devote their communications to Morse code, notwithstanding. For that matter, the problems with the use of English is also overcome with using digital techniques. Indeed, there are digital techniques which will get through when Morse code does not. However, if an individual wishes to use Morse code, despite those advantages of digital techniques, that is their choice.

>

>

For the love of Mike, how does that justify Morse code testing? That may justify its use to overcome language barriers, but there is nothing in the international, US or Canadian regulations or policies which state that Morse code testing is justified for that reason. I have overcome the language barriers with Roumanian stations too, but I have used baudot, amtor and pactor. Would that not be sufficient justification that the government's demand that all amateur stations equip their stations with digital capabilities? For that matter, why doesn't Reid undertake to learn Roumanian if he is unable to understand a Roumanian speaking English?

Perhaps the two of them could better muddle through despite their inequities. But again, this is just a variation on the theme of which mode is better than another, and such arguements are inconclusive and should be avoided.

> If international interoperability, intercommunications among the
> hams of the world, is to remain as part of the definition of the
> International Amateur Radio Services, as quoted way above at
> the beginning of this dissertation, dropping the Morse test
> requirement from an HF band operating privilege
> test cannot be justified!!

But there's the rub, the concept of international inter-operability via Morse code is a notion that is advanced by amateurs whose only purpose is to maintain Morse code testing, even if it is irrelevant to determining operator competency!

> The HF bands, by their very nature,
> guarantee international exchange of signals, but not international
> exchange of information without the recognition and tested ability
> to use a universal communication mode that is accessible
> to all of the world's radio amateurs.

As I mentioned before, it is my choice as to which mode I wish to use. It is also my choice with whom, whether it be locally, regionally, nationally or internationally, I wish to communicate. If that means that there amateurs which whom I am unable to communicate because they are unable to buy or build equipment that would allow them to communicate with me, I am quite prepared to shoulder that burden, that is my choice.

> The CW mode is available
> to all the world's amateurs, even in the most modest, "little
> pistol" station with only a QRP rig, and a simple wire dipole
> strung between the trees--this is a station equipped for international
> communications on the HF bands, and perhaps, there is no microphone
> in sight or owned!!
>

That being the case, if others wish to communicate with those stations, let them do so. That by no means justifies that I, or anyone else, must submit to an examination on the Morse code premised on the notion that there are stations out there who are limited to Morse code communications. If they are unable to communicate with me, that is my problem, not the government's concern.

> Thus, because of the desire for international interoperability/emmergeny
> service the ITU/IARU and the FCC require that amateurs pass a CW test to
> earn HF operating privileges! It is part of the amateur radio
> service, internationally.
>

Now we bring the emergency element in. Reid would have us believe that Morse code testing is justified because there are amateurs in other countries who cannot afford anything more than a CW-only rig but at the same time, has the

resources and capabilities to render assistance during an emergency. I suppose the only cogent response to this notion is to state that I was born at night, but not last night.....

4167. Looking for my first call...

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-02 00:00:00 UTC
From: Mitchell Hamm <mitch@nospam.palmtop.net>
Message-ID: <348490A4.6CA6@nospam.palmtop.net>
Source record: 185288

Friends,

I was first licensed as a Novice back in 1977 or 1978. I let that callsign expire and have since lost my original license paperwork and forgotten the call. I would love to know what that callsign was just for nostalgia's sake. Would someone with a late 1970s callbook give a quick look for me? The call would have probably have been a KN4*** (WN4*** maybe, but not likely) and recorded under this name and address:

Mitchell B. Hamm (yes, really)
Rt. 7 Box 110A
Somerset, KY 42501

Please drop me an email if you happen to find something and thanks very much in advance for your trouble.

73,

Mitch N8XS

*** Remember to remove the "nospam" to get my real email address. ***

This is obviously not an objective statement, but is someone's
subjective opinion. Some "gain personal satisfaction from using
this acquired skill" and some don't. Nobody can force someone to
"gain personal satisfaction". Why punish the individuals who won't
choose to use CW under any circumstances?

> "8. Among its enthusiasts, Morse code operation is perceived as
> more pleasurable, for a wide variety of reasons that are quite
> subjective, but are nonetheless perfectly valid to the individual.

But not to all individuals, probably not even the majority of
individuals. The statement admits subjectivity, i.e. non-objectivity.
This statement is again, some individual's subjective opinion.

> If international interoperability, intercommunications among the
> hams of the world, is to remain as part of the definition of the
> International Amateur Radio Services, as quoted way above at
> the beginning of this dissertation, dropping the Morse test
> requirement from an HF band operating privilege
> test cannot be justified!!

How are you going to force hams who hate CW to use it? How are you
going to force hams to communicate in CW with foreign hams? Make
it a felony not to do so? Hams are not required to own a CW rig.
A lot of older HF hams can't copy CW any longer. To promote the
Morse code testing agenda alone does not satisfy or ensure
"international interoperability" and "intercommunications" without
adding more rules and regulations. If you want to force all hams to
own and operate a CW rig and maintain their CW skill over the years,
come right out and say so. Otherwise, your arguments are invalid.

Yes, This would be the right thing to do....I have been an electrical engineer for 30 years and enjoy building equipment.....but This in only for amateurs who enjoy that part of the hobby.....If you want to be an amateur radio OPERATOR , it is fine......whats the difference if you know one thing about the internal workings of a transmitter or anything else........I only became an amateur several years ago....and this was because I personally disliked the code and felt that code had nothing to do with the radio hobby.....I only learned enough code to squeak by the 13 words per minute..... as far as the tech part of the exam I answered them fine.....now I never use code and operate on HF once in a while..........Most of the time I build transmitters......,.Do what you feel is right for you ......If you just want to be an operator that is perfect.......I couldn't tell the difference between a programmer and an engineer from the general run of the mill conversations.......But you will always find people who insist in playing 20 questions..... Good luck with your hobby in any way you want to go with it....K2IJY Dave

Rick, I must disagree with some of what you say. I don't feel that this newsgroup is representative of Ham Radio in general. I feel it representative of the warring factions that I've seen on USENET and similar computer oriented forums since running a BBS in the mid 80's. I find that the majority of Hams that I know and those that I communicate with on the air get along very well together. If the world was a perfect place, things would be different...

Join the club. When I received my vanity call, their entry for my
old call became: "Previous Call: KD1HZ (Tech)" [which clearly isn't
a tech-level callsign]. I sent e-mail to them about the error (since
if you search on KD1HZ it sez "Advanced", so obviously there is a bug
in their program somewhere...) and it was duely ignored.

I never see them forsale or trade. Does this mean they do what they advertise?

I would like to get a Challenger. New they are 259.00. If you have one new, never put up and want to get your money out of it, send me a note.

Also, I would like to hear from others who have this antenna. Does it work well? Are you happy with it? Etc.

Pat Wilson
N5PW

Thanks for all replies.

I suppose you're referring to JY1, the King of Jordan.
A king is entitled to set radio policy for his nation. The ITU, being a body of the UN, cannot force any country to abide by its regulations. If a king wishes to grant himself his country's license, then he is in fact licensed.

JY1 has a mighty good "fist", I must say. He'd have no trouble passing any code test.

As Mark says, below, I too must disagree (apparently with Rick Slater), at least from one direction.

During Thanksgiving, I was able to read the latest QST while my wife drove us to an adjoining state.

I was enthralled by the richness of products advertised in this issue plus the quality and assortment of the interesting articles therein. My perspective was QST's from 20 years ago which I had just been perusing, only days before. Surely the magazine has grown, the quality of printing is superb, and the cost of new gear relative to features offered surely has advanced!!!! Yes, really.

Maybe there are "warring factions", but surely there must be something going on which represents Amateur Radio vitality as evidenced by a viable "market" for "gear"; otherwise why would so much money be spent for advertising in the "Christmas" issue of QST?

Amateur Radio offers a rich diversity of activities for the public spirited, for the most esoteric of experimenter technophiles, to those who just want to "chew the rag". After several decades of being mostly a technocomputer freak, and idle in hamdom, I am very much refreshed by the challenge and interesting avenues I see open for me via Ham Radio.

So what's the "bitch"? IF folks are warring, why so????

Copyright and Editorial Notice
==========

Last Revised: 6/1/96

Amateur Radio Newsline is a weekly audio service produced by
Newsline, a service of the Westlink Radio Network. Editorial
comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - newsline@ix.netcom.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO
from materials provided by Newsline. and is jointly distributed
to online services and bulletin board networks by Steve Coletti
and Dale Cary.

All others are asked to not post Newsline to any BBS or
network without the permission of Steve Coletti. There have been
distribution problems with many of these networks recently and
posting Newsline to an echoed conference because you haven't seen
it there doesn't mean it hasn't already been seen elsewhere.
Reposting causes wasted bandwidth and additional telephone
charges to be incoured by the sysops of these volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the
audio version in it's entirety over nets or repeaters. The text
version may be used for packet distribution as long as it is sent in
its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice
or digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet
retransmissions must be made without the editing or deleting of any
other part of the Newsline content. Unauthorized additional
commentary to the original message is also prohibited. To do so is a
violation of copyright and subjects the initiator to legal action by
Newsline.

Newsline may also be excerpted for code practice transmissions,
and may be used as a reference source in bulletin board discussions
under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of
Newsline.

China. No radio rules at all. Run what you brung. No license required.
No enforcement at all.
Philippines. Same as above.
Indonesia. Same as above.

By the way, is this FM10 thing you guys are discussing a digital transmitter ?

73, Jim KH2D

And so you're going to recommend that nothing be said about this to him,
because by doing so, it might destroy his 'spirit' to pursue pirate
radio? In other words, by your silence, you will cause others to become
victims of the legal system?

I think you're the one that should go away. Permanantly.

Gee, Mike ... I would bet that if the bell curve of the intelligence
of those in amateur radio skewed back to a more normalized distribution
as is reflected in society, that the majority would be smarter than you.

You'd better be careful what you wish for ... you might get it!

>create a lot of jobs - offshore.

A hard lesson was learned when the FCC let the market decide an AM stereo standard. We wound up with little AM stereo penetration, and the surviving standard was the worst one, albeit the cheapest. A single national broadcast standard is needed to achieve market penetration and commonality of interoperability in a mobile society.

Since the US was one of the earliest major national markets to embrace TV, and color TV, the US adopted one of the earliest broadcast standards. It is clearly inferior to more recent analog standards such as PAL, but once a large installed base exists there is no practical way to let the market drive a new broadcast standard which is incompatible with NTSC. Adopting DTV gives us an opportunity to leapfrog to a new level of quality of service. But it won't work if the market is allowed to fragment into several competing standards. That can't work in a broadcast mass media.

Broadcast is a chicken and egg situation. Consumers won't voluntarily buy receivers for a system which isn't being widely broadcast. And broadcasters won't voluntarily broadcast in a standard which isn't widely receivable. It is not a situation where an open competitive market can drive a switch to a new standard.

The UK conversion from 405 line B&W to PAL was long and difficult, but it serves as the most relevant model for how to address revising a national broadcast standard. It must be driven by national fiat, and there must be a definite timetable to follow, or it won't work.

Theoretically, the clock started ticking when the first station started
DTV programming. That's already happened. More practically, the
clock starts ticking in October 1998 when major market stations
are required to start DTV service. And the political reality is that
NTSC won't be abandoned until market penetration is near enough
to universal to make the political outcry bearable.

> If the first is true, than it means that about 100,000,000 HDTV sets must be

>other TVs. The person I feel sorry for is the uninformed consumer who
>purchases that big 50 inch analog home theater system 4 or 5 years from
>now :)

The FCC proposes to address that issue. Sale of new NTSC TV receivers
will be banned one year after the start of DTV broadcasting. That will allow
existing analog sets to be replaced by attrition over the nominal 10 year
span (most TVs are replaced normally over a 10 year cycle which is why
10 years was picked as the phase in period in the first place.) The people
to pity are those who will need a new TV immediately after the ban on
sales of new NTSC receivers goes into effect. They'll have to pay the
price premium for being on the infant side of the volume/cost curve of
DTV.

(Note, political pressure may delay this ban on new NTSC set sales,
but ultimately it will happen. I suspect it will phase in, with high end
sets being impacted first and the ban trickling down to inexpensive
portables as the volume/cost curve crests and reduces the DTV
cost premium to a more nominal value.)

Actually, I would think that it might well be viewed as rather
compelling evidence that we were stupid as cattle, rather than
intelligent life forms, with the result that we might well be
considered a suitable source of protein instead of an interesting
species to be befriended.

We've added some new things to the CCF RADIO WebPages!

Please have a look when you get a chance.

http://www.mnsinc.com/bry/ham/ccfradio.htm

There are pictures of some fine British WW2-era radios along with the memoirs of some of the CADETS who operated them from various schools around the UK in the 1960s etc.

You will thoroughly enjoy their recollections of the good old days of Daytime AM operations that thrilled many a young schoolboy!

Cheers - Bry, G3XLQ / AF4K

>
> 1) Is the maximum power on 160m, 75m, 20m, 17m and 12m
> 200 W, PEP?

No. The US amateur power limit is 1500 W PEP, except as noted in 97.313. Novice band segments on HF are limited to 200 W PEP, as is all of 30m, otherwise HF operators may run the full 1500 watts, subject to the minimum power necessary rule (which is, alas, widely ignored).

> 2) Is the maximum power on 6m, 70cm, and 33cm 1500 W, PEP?

Yes.

> 3) Is phone on 17m USB?

That's customary, but not mandatory. The custom is LSB on 160m, 75m, and 40m, and USB on all bands above that.

> 4) Does RTTY and data on 30m use the entire bandwidth?

Yes, RTTY and data are permitted on the entire 30m band. But note that does not mean that a RTTY or data signal can occupy the entire bandwidth of the band. Occupied bandwidth is a different thing. On HF, that is limited to 1 kHz (except on 10m) for manned stations, and 500 Hz for automated forwarding stations.

> 5) On the 33cm band and above, is the maximum data transfer
> rate 56 kb, and the FSK maximum shift 100 kHz?

No. On the 33cm band and above, there is no limitation on baud, and signal bandwidth is constrained only by the requirement to keep all emissions within the band. The 56 kb limit, and the 100 kHz *occupied bandwidth* limit (not shift) applies only to the 219 MHz, 222 MHz, and 70cm amateur bands. Below 219 MHz, the occupied bandwidth of a digital signal is constrained to 20 kHz, and baud is limited to 19.6 kb (though note that this is either/or, read the rule for details). Baud and permissible bandwidth step down again on 10m, and again at lower frequencies. See 97.307.

(Note, baud != bps. Modulation symbol overloading is permissable, IE one baud may represent more than one bit. Only modulation symbols are regulated, not the bits they represent.)

Someone mentioned a while back that 2.3 GHz was unused.

Au contraire, me amis.

Amateur Television Network (ATN) consisted of about 1/2 dozen HAM TV repeaters/links stretching from San Diego to Norther L A - across the desert into las Vegas - all utilizing 2.3 GHz FM-video.

Altogether, they use 450, 1.2 GHz and 2.3 GHz. So sophisticated is the system that they even use Picture-in-Picture (PIP) to literally see when anyone keys up another of the links.

Horse saddling was never relevant to autos. Is that supposed to be a
subtle point? I guess in todays day and age if some body speaks with
authority they must be right. Morse is still a widely used mode.

Yup, looks like it. Strange isn't it? People leave tyranny all
over the world, and come to Amerika, HOPEFULLY to find freedom, only to
find that in Amerika, a person can be JAILED for committing an act of
civil disobedience (read: non-violent crime). Isn't it just incredible
that WireHead and I are going to have to go to prison for committing the
vile act of EXERCISING OUR FIRST AMENDMENT RIGHTS? However, isn't it even
more incredible that _YOU_ SOMEHOW ACCEPT THIS AS BEING OKAY? :-/

Recently in the news an immigrant from Russia came here 22 years
ago and started a plastics company. A perfume company ordered viles from
him to package their product. He set to manufacturing these small viles.
Drug dealers found the viles to be excellent packaging for crack cocaine,
since the immigrant had produced a large number of them, and sold the
surplus through various outlets as surplus packaging. Thousands ended up
on the streets used to package crack. He was arrested and charged with
conspiracy to distribute crack cocaine. His production records showed the
surplus to be ABLE to package approximately 10 tons of crack, thus he was
charged with conspiracy to distribute 10 tons of crack, punishable by life
imprisonment. LIFE IMPRISONMENT FOR MANUFACTURING PLASIC VILES THAT
COULD HAVE BEEN USED TO PACKAGE CRACK COCAINE! All of his personal
assets, his family home, his factory were all seized, he was left without
money to pay for a decent lawyer to defend himself, and his court-
appointed public defender sold him down the river by convincing him to
sign a statement of guilt, which later was used against him.

A man leaves the despotic regime of the USSR and comes here in
search of freedom, only to find that his hard work to build an industry
here can be dashed to the rocks by criminal prosecution, and by civil

forfeiture, all without HIM actually committing any crime. The man's name is is Sam Zhadanov, and you can search for news articles yourselves if you believe this is so incredible that it can't be real. Or better still, write to the man yourself, he is currently service life imprisonment in a federal slave labor camp, in Pennsylvania. His address appears below...sq

SAM ZHADANOV, REG #42489-053
ALLENWOOD FEDERAL PRISON WORK CAMP
MONTGOMERY, PENNSYLVANIA 17752

Goodies for sale, Trade, Want

I have the following for sale:

Kwd TS930SAT radio EC/NMC - Aligned by International Radio
MFJ 1786 Hi Q Loop ant Mint/NC - 1 to 2 Hours of indoor use
MFJ 482B Memory keyer EC - One small scratch on top
MFJ 949C Deluxe tuner VG/EC - Two very tiny scratches on side
MFJ 931 Artificial gnd EC/Mint - Hardly used, matches the tuner
Kwd PS30 pwr supply VG/EC - Very low Hours

I have original boxes and manuals.

I need the following:

Kwd BS8 pan adapter - I'll buy or trade for my BS5 pan adapter.
Kwd YK-88SN-1 SSB filter
Heath HP-14 DC-AC mobile power supply for the HA-14 1KW amp.
Heath HW-12 manual and pwr supply
High power Dummy load
(4) matched Svetlana 811A tubes - looking for brand new ones
(2) or (4) matched Svetlana 972B tubes - looking for brand new ones

Email trade proposals or best offers to Saad.Mahaini@mci.com

Back to the question of who knows about the new stuff?? I have been working at Radio Shack for one and a holf months, and today the first person asked me about HDTV. Many times the number of people have asked about PCS cell phones. Most people have no clue what is coming in the next few years. I am not going to buy a $500 TV for this stuff, I don't even have a cell phone. Amature radio, 70 years old, works great for me when I am on the road. Just like cable on a ten year old TV works great for me to.

Brian, kf4frp

And a legal notice so I don't get canned:
Opinions and statements here do not, in any way, reflect Radio Shack's views or policies.

4207. Wayne Greene

I have been a reader of Wayne Greene, Editor of 73 Magazine, for many years. I have always have read things throught his viewpoint.

Curious to know more about Wayne. I.E. how is to do business with, his personal
life etc. Always found his editorials to be interesting. Now I am curious to know
more about him. Some what of a biography from the viewpoint of others.

Care to share any interesting stories about Wayne. Good, bad indifferent?

This for my own personal curiousity and probably a lot of others in the Ham community.

25% is a little high, the last figures I saw regarding ARRL membership were
based on 1996 figures: there were 173,491 ARRL members out of 700,000 total
Amateurs. Their are indications that their membership is declining. The
membership dues had to be increased, coupled with decling revenues across
the board, active solicitation of its members to cover shortfalls and its'
failure to draw new members from the Technician class indicate an
organization that by resisting change is contributing to its' own decline.

Steve,
The rightness of an act, has very little to do with the lawfullness
of an act, which is after a fashion your point Steve. Really Flaming
Ken for pointing out this fact, as well as the suggestion that the rest
of us hams, are not right in the head for KNOWING and advising someone
of what the Law is, and the consequences of breaking it. I happen to
feel that the FCC rules on the subject are way too restrictive (oh for a
spell checker under netscape) on this subject, but alas for the present
they are the rules.

As to moving, if you learn of a country not going down this path
of lawing us to death, do let us all know.

He is fake.

It is one thing to one thing to be a preacher of unpopular causes
but one ought to be one of character when one preaches character and
strength. Wayne Green in his magazine would make you think he is the
LOrd and can save us all-if we would only listen to him. Much of what he
says in his column, if implemented, would save this country and amateur
radio. It is unfortunate that the man is all BS. At the last two New
England A.R.R.L. Conventions his entire presentation was self serving.
His presentation was filled with his accomplishments in the area of CDs
(music), his new book on declaring war on our economy, his
accomplishments as a DXer and his phoney call to action for the young in
amateur radio. When he tells you of his exploits as a rare DX station,
he also tells you how he worked stations in the thousands in a few
hours- of course he also encourages his listeners to TALK to DX stations
not just a 30 second signal report contact. Thus I guess when Wayne
decides to get on a "QSO run" that is OK, but the rest of us must live
by Wayne's preaching? His interest has nothing to do with saving
America, helping our youth and/or amateur radio. His interest is in
making more money for Wayne Green and he knows his audience of docile
hams will never speak up. He tells us of how he was on this governors
committee and that commission BUT he is all talk, no actual action. He
further supports many of his arguments with half truths (as lawyers say
"facts not in evidence").

Wayne is not as stuffy as the old men from the A.R.R.L. but at
least those men are real men. Let me leave you with this quote from
Charles E. Wilson:

I have always liked bird dogs
better than kennel fed dogs
myself-you know, one that will
get out and hunt for food rather
than sit on his fanny and yell.

The check that WB2OTK wrote was for the amount of $502 and the bench warrant for his arrest is posted on the Web. I will be glad to send you a copy. Unlawful flight to avoid prosecution and the uttering of a worthless document for that amount both serious crimes,

As for the three felonies: KV4FZ was found guilty of three counts of U.S. Code Title 18 Section 1029. The judge entered a judgment of acquital as to all of the charges except one count. Subsequent to this the remaining federal count was vacated by order of the trial judge. At present, from the court records there is not a federal judgment against KV4FZ.

How does this equate to three felony convictions?

I believe there are more CB'ers who eventually get ham licenses (and
possibly can't distinguish betwee the two), than hams who turn
to CB (Porsche owners seldom begin driving VWs). I can't imagine
someone who's tasted the sweetness of operating on 160,80,40,30,20,17,
15,12, and 10m giving up those bands for 40 channels on 11m. I'd have
to question that person's sanity...

>The intrigue of outbanding also fascinates some operators.

Yes, but hopefully someday we'll be able to wipe out the criminal element
within our society. Too bad we can't punish parents for the crimes their
children commit.

James Vincent O'brien III, KD4CDB, convicted
drug felon. Convicted of three felony drug convictions
in Paulding County, Georgia and just released from
parole this summer.

If you have received threatening e-mail from him, report
it to Harry Smoak at abuse@mindspring.com
They have an open file on O'brien.

Hi Carl,
Why is it you and your buddy James O'Brien keep trying to promote
me? As you know, my title is "Lecturer (Step C)." I've never used
the title "professor" - I only have a Masters Degree, not a PhD.

>particularly considering that he claims that teaching math at
>the university level is his area of expertise ... perhaps this
>is the REAL source of "the dumbing down of America" that the
>pro-coders refer to so often???

No, it's called "hyperbole." See below:

>> We both exercise the freedom of using utilizing hyperbole (recall
>> your "code causes brain damage" comment). But forgetting the
>> hyperbole, let's assume 99.9% of us are law-abiding; with a base
>> of say, 600,000, that means we have about 600 intensional lawbreakers
^^^^^^^^^^
>Jeffy doesn't spell too well for a professor, either ... and that's not
>just a "finger slip typo" ...

"Jeffy"? That's what James O'Brien calls me, too. You're beginning to
sound more and more like him daily (probably due to the fact that
you both have about the same level of formal education).

As far as spelling "intentional", go back to the archives and read my
comments from early this year about the FCC not finding amateurs
guilty of "intentional interference" when such amateurs send CQ over
10m illegals. Funny that I'd know how to spell it then but not now,
eh?

>Carl - wa6vse
(tech+ for 20+ years)

A failure of Incentive Licensing!

The model number may differ outside europe (70cms multimode rig) but I would like to know where they have hidden the battery backup for the above model. It is a bit of a nuisence having to reset the VFO`s and memories every time I turn it on. I took it apart and had a good look around the main boards for the battery but couldn`t find one. Can anyone help me with this otherwise excellent rig?

I am so happy that code is a requirement for the best portions of the Amateur radio spectrum that I wish that there would be more testing that required code. GO CODE, GO CODE

Onward and most of all upward learn it or stay on the frequencies that are more appropriate for you so that you can't propagate bad and poorly referenced information about code.

Fortunately anyone that has done the code and is on the H.F. frequencies never complains about learning it, they may not use it but the don't complain.

Notice the people who complain about it have to do it on the internet because the frequencies that they use won't get the job done otherwise for their belly-aching complaining mentality.

GO CODE !!! GO CODE !!!

Eric KC7YGH Code knowledge and proud of it!!!

Gary:

I am assuming that this is a worldwide standard. Therefore I can take my new TV anywhere (it is such a pain to deal in Europe). How are the other countries implementing this standard?

If this is worldwide, it will really help us. We generate most of the worlds programming. Lots of Marks, Francs, Pounds coming back here (or at least the West Coast). It will also be nice when I am in Germany, to use the same set and DSS system as I use here. Digital TV (DTV) to me is a blessing.

Gary,

The media company for whom I work (we own newspapers, direct mail, print, tV, signage, and several internet site properties) is very concerned about this whole issue. There is considerable speculation in newspaper circles that the continuing proliferation of DSS, the diminishing status of "free" broadcast TV, the high cost of entry into DTV and internet access (attendent hardware and minimal expertise as how to maintain that hardware and software) will have the ultimate effect of driving people who have a need for local news back to the daily printed and delivered newspaper. Our broadcast people are definately worried about declining market penetration due to the DSS effect and the possibility that DTV will not be accepted, advertising revenues will shrink, and the capital costs of conversion can not then be absorbed.

Actually, most of the public does read a daily or weekly newspaper, the latest figures from the Audit Bureau Of Circulation puts the daily penetration figure at around 60% of the households. If duplicated penetration is involved, this rises to over 70%. In addition, the "average" newspaper reader tends to me much more upscale in demographic makeup than users of other media with the possible exception the the internet user. This can be argued however in light of the Neilson company's problems with pinning down just who internet users are and what there online prefferences are. I agree that newspaper penetration has declined in the last three decades. The high point was reached in 1967 when unduplicated daily newspaper penetration reached about 75% of the

households.

My company operates several internet sites that are tied to specific media properties (newspaper and TV) we certainly do not make any profit from them as yet, and local interest is very low.I guess we have not found the magic formula.

Thanks for all the great posts on this subject Gary.

From: submarine@airnet.net
Message-ID: <3484259d.141166645@news.airnet.net>
Source record: 185372

What's the big deal about no code anyway? 2 meters is the new mecca for CB radio, with "my personal is" good buddy crappolo. HF is the wasteland of sociopaths, drunks, perverts, criminals, and people who try and sabotage peoples jobs, calling family members names, trying to have people kicked off the internet, etc. What a filthy gutter ham radio has become. It seems that it has become a mirror of the sickness that has befallen the whole country as a whole. So whats the big deal about no code? Open the floodgates and let them all in. Code never kept out the slime anyway, it was just something to seperate the men from the boys. In other words it was the divider between the serious ham and the one wasn't serious. But those who say it kept out the maggots are wrong. The maggots have been here a long time.

Gee, Bill ... we can still work to get the FCC to lower the Morse test speed
to a femtoword per fortnight ... or persuade them and the State department that
it's in the national interest to take an exception ...

Don't even BEGIN to think that the issue is going to "go away" until the
problem is resolved.

This makes no sense ... those who jump through the
stupid hoop and learn Morse, only to toss the key after
they pass the test don't contribute any more "QRM" to
CW folks than would someone who never wanted to learn
Morse and was not forced to do so ...

The only "source of QRM" in Morse are those who actually
USE Morse ...

> This will be good for
> CW operators initially.

Not having the stupid Morse test would be good for ALL
of ham radio PERMANENTLY.

> But later on, as we die off,
> It will be more difficult to
> Find a CW QSO...

There will probably always be enough folks who like to
do things the hard, brute force way to assure that you'll
have someone to QSO with in Morse.

Bill,

ARRL members are but a SMALL MINORITY (~25% or less) of licensed
hams in the US ...

The ARRL has, for many years, been the "tail wagging the dog."
(and doing a VERY BAD job of it, too ...)

> lowering every kind of standard.

There is a distinct, yet subtle, difference between "lowering standards"
and "setting relevant standards" ... just as one need not take a test
in horse-saddling to get a license to drive a car, one should not have
to pass a test in 1847 Morse code modem emulation to operate a modern
radio on HF ...

> Lets start making every type of test in society harder, no waivers and
> no lowering of standards because people whine!
>
> As for my two cents, lets keep the code. Many HAMS in other countries
> are not fortunate enough to be able to afford fancy SSB/AM rigs for
> phone, so CW is their only mode. I guess the ITU can relax the code
> requirement so us Americans with the money can talk to ourselves on
> HF.

Nobody is talking about prohibiting the use of Morse ... if anyone wants
to use Morse (or if that's where the "good DX" is and they want to work it)
they will learn Morse VOLUNTARILY ... but forcing it on everyone makes no
sense.

Besides, I've traveled extensively in some of the poorest third-world
countries in the world, and the hams are those with money ... and they
have top-notch stations assembled for the most part with the same (or
better) rice boxes as most US hams ... the poor folks are too busy trying
to survive and feed their families to have time to indulge in ham radio,
Morse or not ...

>duplicated as to network content.

There are two issues driving cable penetration. Primary is the inability of many viewers to get an acceptable over the air picture due to antenna restrictions (many of which were fostered by the cable industry), and propagation factors. Second is program content restrictions on over the air broadcast. Cable can run programming which over the air broadcasters cannot, or which must be so heavily censored to air that the value of the programming is lost. (It is rare to find a major feature movie made in the last 20 years which can be aired uncut by over the air broadcasters. That has been a *huge* competititve disadvantage against cable.)

DTV holds the potential to change both situations. Because of the FCC interest in pushing DTV, the Commission has acted to pre-empt restrictions on outdoor TV antennnas. And the more robust DTV signal will work better against propagation defects. This will even help viewers using rabbit ears. Combined, these two factors will mean that most people will be able to receive acceptable off the air pictures for the first time in more than 30 years. Thus one factor which drove them to accept a monthly cable bill will be removed.

Second, DTV holds the potential to widen the viewing choices for off the air customers. The number of video streams available off the air can nearly quadruple. That gives most communities at least 40 over the air signals to choose from instead of the current 10 to 12. And the digital nature of the signals, coupled with V-chip like features of DTV, may allow loosening of content restrictions which currently give cable an unfair competitive advantage.

>As far as over the air local content continuing to hold ground
>against DSS, I have access to research which suggests that only 50% of
>those who purchase DSS ever bother to put up an outside antenna for the
>purpose of receiving local over the air signals. Further, there is a

>(and you are right, it may not be the "high" defination TV we were led to
>believe it will be) might have some reception benefit that may induce
>people to put up that outside antenna, but this is not what we are seeing
>with DSS.

Yes, this is a troubling problem. There are several components to this issue, some of which are addressed by DTV. As you know, DSS antennas are small, about 18 inches, and generally can be installed low to the ground since their look angle is up. Off the air TV antennas by contrast need to be large, and mounted high and in the clear. It also takes much more installation expertise to get a good analog off air picture from all local broadcasters than it does to install a DSS to deliver good pictures from the satellite. Off air reception antenna location is much more site dependent, and may need the capability to be rotated to receive all local channels with a minimum of ghosting and snow.

This expertise was once common in every community, but cable, and restrictive antenna ordinances and covenants fostered by the cable industry, have destroyed much of this base of expertise over the last 20 years. DTV won't relieve the need for antennas to be mounted high, but the more robust nature of the signal does mean that antenna requirements are eased somewhat. For many customers, a small active antenna may suffice to deliver pictures equal to DSS quality. And there will be no monthly subscription fee to access those pictures.

The local content issue is a major selling point for over the air broadcasting. Local news and features can only be delivered by local broadcasters (or cablecasters). Satellite systems can't address that local community involvement. Broadcasters have been making efforts to strengthen their product in this area for some time. DTV distribution will help the delivery of that content to be on a more equal footing with DSS.

(I should note that the rapid acceptance of DSS shows that many viewers are hungry for an alternative to cable. Both DSS and over the air DTV are natural allies against the cable monopoly.)

>Gamble? You bet!

Yes, many broadcasters see the fate of local broadcasting as riding on DTV. Without it, their market share will continue to dwindle until there is little left of the over the air broadcast industry. And that, arguably, is to the detriment of the public interest. Without a variety of local viewpoints, most of the news and information the public receives will be controlled by a few national sources (like CNN). Local news will be left to talk radio. That will leave the public more poorly informed than they are today (and it's pretty bad today).

Some say that the internet will supply the local variety, but I'm skeptical that's a total answer. The internet competes against local print news, but most of the public doesn't read newspapers or read internet venues. Local TV news is the primary source of information for the majority of the public. So keeping that healthy, varied, and competitive is important.

WRONG. I never told you to go away. I told you to leave people alone.
Telling you to go worship Hitler or Stalin does not imply that you are not
welcome to return at any time after you've prayed to them for whatever
evil regime it is you desire.

You told ME to go away PERMANENTLY. Quite different.

BUZZ You lose.

Guess what. I'm going to take pity on you and GIVE you the last word.
That's the only reason you're involved in this thread anyway. To win.

I'm involved because I wanted people to know that your point of view is skewed
and biased by the fact that you are protected and privileged by an organization
that keeps everyone (including you but you don't realize it) from expressing
yourself to the masses with the same effectiveness as a giant wealthy corporation
for no more reason than that that giant wealthy corporation has given them blood
money.

Enjoy your repeaters and all your special frequency allocations but, in a few years, when micropower broadcasters fill the airwaves with relevant, timely information that serves the communities they broadcast in...and those same giant corporations have convinced the FCC to take away your allocations one by one and turn them over to commercial services, well don't come crying about it here. I don't think you'll get alot of sympathy. Maybe, then, you'll have to be the pirates.

At any rate, you win we're all going to jail, we're completely wrong and our victories are meaningless. You can go back to your safe little hamshack now and tell your buddies on 2 meters that you've saved the world from freedom for one more day.

Wirehead Prime

Um, NT offers real multitasking but I hate to tell you that Win95 does not.
It does not have full multitasking capabilities like NT or OS/2 have. Also,
Win95 is not a 100% 32 bit OS. It may supprise you (and most people) to
learn that the majority of Win95 and the accessories that are bundled with
it is 16 bit stuff. So if you really need a 32 bit multitasking OS then NT
or OS/2 are necessary (I'm not sure about LINUX).

>

>to *hide* things from the user. With Linux, everything is out in
>the open. When the disk mysteriously rattles, you can look and
>see what's going on. With Windows, it is often a mystery.

I've noticed that most people feel the way you do about Win95 and its GUI. The sad thing is that the NT GUI is now identical. I would recommend OS/2 Warp 4. Warp will run all your DOS aps for you and it doesn't hide anything......everything is available to you (sometimes a little too much is available, but at least they aren't hiding anything)

The funny thing about Win95 is that the company I work for decided to "upgrade" to it and it cost them several million dollars to upgrade hardware and software so that they could run Win95. The good thing about it was that I was able to inherit several "obsolete" machines (like 386DX-40's with 16 MB and 486 DX-66's with 32 MB) and I run OS/2 with Win 3.1 on them. My computers do everything their new ones do, they run my Motorola radio software (Win95 doesn't like it), and I have true multitasking......and my department didn't spend a dime!!!! And now I hear that because of problems with Win95 (and Micro$oft pusing everyone to go NT) the company will be "upgrading" to NT in 1998. Lucky for me, I have special requirement and can continue to run Warp on my Intel machines and UNIX on my Sun's.

If you insist on repeating the COMPLETE LIE that I compared
ANYBODYS comments and the Nazi party, then I will be compelled
to have a word with our mutual ISP, Demon Internet. I have a
copy of ALL messages sent and received in this thread, and (with
the exception of this message) I have NEVER ONCE mentioned the
NAZI PARTY. You, however seem to be preoccupied with them.

I am quite willing to have a discussion on any subject and
accept criticism where it is merited, but I draw the line at
people put words in other people's mouths when they were never
said.

As for growing up, I think you need your nappy changed.

Nick.

Eric,

I tried to use a Larson 2/70 glass mount on my Lumina mini band and had the same problem. My handi with a rubber duck worked a lot better than my 50 watt mobile Yaesu using this antenna. After trying everything I could think of, I wrote to Larson. Larson tech support sent me a letter explaining that on some vehicles using a special impregnated glass (the technical name for the glass escapes me) the antenna will not function. They were kind enough to notify the business where I purchased it and I returned the antenna for a full refund. I notice that in some of their advertising a disclaimer about this problem is now added.

Don't bet on it. Never under estimate the power of the
Maximum Service Broadcasters lobbying group. The
politicians use Broadcast TV for their re-election
commercials and are very sensitive to the media which
elects them. Don't look for any give back in mine or
your lifetime.

Eric,

I found the letter from Larson after I made my initial post back to you. The glass is called "Passivated Glass" They also mention that it is on "many" vehicles mainly those from General Motors but some from Ford and some of the imports.

hope this helps

Stations will be required to provide one free program at at least the same resolution as is currently being broadcast. You won't lose any programming you're already getting, with the only additional payment you're going to have to make being for the DTV receiver (and VCR) itself.

Admittedly, that won't be a negligible cost. Remember the stations are facing HUGE expenses to get this stuff on the air. All stations will have to add a second transmitter; most will also need a second antenna. Many (probably about half) will need a new tower - and all the FAA/local approvals that entails. Oh, and also the expenses for new studio equipment.. and some incidential expenses for new remote pickup gear, as the government is seeing fit to shrink the primary TV RPU band & auction part of it.. The 2nd/3rd/4th subscription channels may well be the only way for some stations to pay the cost of continuing to provide their 1st free program...

REPLY...

I was wondering when people were going to start talking about this subject (HDTV). The FCC made this decision without even talking to the American people. Yet, the FCC expects the entire American population to switch to a television system that, in the end, is going to be a net loss for the television viewers.

First of all, Clinton has said that he supports this switch, but at the same time describes himself as the environmental president. I wonder what the hundreds of thousands of prematurely trashed television sets are going to do to the environment.

I know the FCC has said that there will be a grace period of several years (so people can keep their old sets), and HDTV converters for those old sets, but lets be honest. The industry is going to promote HDTV like crazy. Many thousands are going to switch their current television to a HDTV television, and many of those older sets are going into the local landfill.

Second, I read an article, by a television executive in a business magazine, where he talked about the real advantages of HDTV. The biggest advantage, which he says is what makes HDTV so attractive to industry, is the ability to copy-protect television broadcasts.

He describes HDTV as the "weapon" that the industry can "finally use to prevent the use of low-cost video recording equipment to duplicate television programming." In other words, people will no longer be able to record programs for later viewing.

For me, that last issue alone is enough to cause me to be opposed to HDTV, but there are other reasons. HDTV promoters say that HDTV will offer more channels. My current cable provider only offers 55 channels. That means that more than 75 percent of the current channel capability is going unused. My cable provider does not provide more

channels because they say they cannot afford more channels (who knows). How is HDTV going to change that?

HDTV promoters say that we will have better picture quality. The picture quality I have now is just fine. Why spend billions of dollars industry-wide, and hundreds of dollars myself, to switch to a promised better picture, when I already get a decent picture with what I already have?

In the end, I just cannot see that many real advantages to HDTV. But, it seems the industry, the FCC, and Clinton (heck, for that matter, Congress too), are going to offer me little choice in the matter.

Dwight Stewart (KF4URZ)

TO: majordomo@qth.net
SUBJECT:
BODY: unsubscribe wyham

To post information/questions to the list:

TO: wyham@qth.net

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: k7on@qth.net

QTH.Net Digests and Archives (for subscribers)
k7on@qth.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
wyham and subscribe wyham-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe wyham-digest
unsubscribe wyham

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index wyham-digest

and get a list of files that are available by request.

Here is an example:

>>>> index wyham-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get wyham-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/wyham-digest.archive

there isnt anyone out there that has ownership on any of the bands what
do they do ,issue titles of ownership. give me a break!!!!!!!

4277. Re: Surge supressor for breaker box?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-03 00:00:00 UTC
From: Mike Stanton <mstanton@centuryinter.net>
Message-ID: <01bd0043$d7daee20$71a541ce@cen11212>
Source record: 185197

I have one of these devices installed in my house.. It is wired directly after the main cut-off breaker inside the breaker box. It has leads to attach to both phases and is said to protect all circuits in the house. Mine is a small device about size of pack of ciggs with heavy guage wires.

I got mine from electrician friend I was working with. You should be able to get them at any electrical distributor. Dont overlook the power company either. They have available surge protectors installed on pole I believe....

BillR sezz:

> Amor,
> Have you passed any of the tests? Do you have a callsign?

Are you one of those guys who chimes in with "callsign!" or "I.D.!" on the 2m repeaters?

I have held 2 Citizens Band callsigns beginning in 1966; 1 MARS callsign; 5 USA amateur, and 1 other amateur calls since first being licensed as a Novice 1967, Conditional 1968, Advanced~1971, Extra & 1st Class (General Radiotelephone)1972. I have been Chief Engineer and Broadcast Consulting Engineer, constructing a number of broadcast facilities for which I was personally responsible for obtaining callsigns for. I plan to get still another amateur callsign (vanity) soon. Is that enough? There is more...

I have never joined the ARRL (I have my own reasons)! I have personally lobbied, advised, and consulted to friends who are members of Congress in the USA on behalf of various radio services.

I was a slow learner. Does that bother you BillR?
Does one need to spout their callsign to the internet? The last I checked that was only an FCC requirement at various intervals when transmitting on the ham bands, various other radio services, or within a few minutes of the top of the hour on the broadcast bands.

I still enjoy 11m, the low end of 40&20 CW, 15 SSB, 2mFM, and various contests, although my code speed has slid down to about 30.

There are a lot of other CB/hams on 11m (mostly FM and SSB) throughout the world. It doesn't make them a "traitor" to either group.

Cbers wouldn't be able to get enough welfare checks together to buy 10
meters.
Even if they all sold their trailer homes, it wouldn't be enough.

Boy, you anti-CW test guys are a bitter bunch! I had no idea!
Just wanted to present what was going on, internationally.

All that stuff I quoted has been considered and, apparently
accepted by those who vote on such things, internationally.
Perhaps you had better check out the IARU web site.

As you know, the entire issue is "off the table" for awhile; or to
put it another way: they couldn't get the votes rounded up to
change anything yet, so decided not to spend time (money)
on the issue for a few years. Ditto here in the US: ARRL
BOD "tabled" the topic, for now.

73, Jim, KH7M

> > Amateur radio is not like military, maritime, nor commercial
> > message/news/etc. communications.

But ALL that Cummings has to say ignores the above VERY differences!!
If you read my post, the differences are explained.

Amateur radio exists for the purpose of Personal Intercommunication.

That is the purpose of the service. And, since signals radiated within
the HF spectrum cannot help but propagate internationally, such signals
are regulated internationally!

For now, those who set the regulations have decided, just a week ago
in Geneva, to leave things in the HF spectrum as they are for the
next few years. And the reasons they are doing so are cost, (that
is, they couldn't round up enougy votes to change anything now) the
present arguments favoring CW testing stand as needed -- in their
opinions -- and I wanted to present the history on which those
opinions apparently rest.

None of what I posted was my own thinking, at least that part in
quotation marks.

If you review the statements at the last Regional ITU meetings, see the
IARU web pages, you will see the new emphasis on international emergency
communication capability. And whether Cummiongs chooses to help or
not, many nation's amateurs do not have all his amtor, pactor, etc.
capability to call for assistance, nor to put out health and welfare
situation information. So, though he chooses not to get involved,
the international community still views that CW just might be of
some help in such an emergency -- read the most recent report,
released in Nov. '97, by the IARU FASC committee.

How many Pactor, Amtor, etc QSO's have you had that were
not prearranged, or on a schedule?? Ever call CQ on a digital
mode other that RTTY??

Cummings challenges the IARU committee for including the word "international" with the treaty word "interoperabiltiy". Seems as if this is an odd challenge to an international treaty, and by an internationally staffed committee of the IARU! Sort of hoping to win by picking at nits.

Not my interpretation, nor ideas, but theirs.

73, Jim, KH7M

No I am not talking about the frequencies below 28 mHz. I am talking
about the
low end of 10 meters. 28.085 is a regular truckers channel now. When the
band
is open, I can hear plenty of them, sometimes that frequency sounds like
channel
19. I also hear other cb stations up and down the band, some are even
comming up
above 28.3 into the phone band now. When they do that, I fire up the AM
rig and
kindly ask them to go back to the 'good buddy' band. I usually ask them
where they
are located and probably 90% of the time they are comming out of 4 land
and up and down the east coast, which may be why you never hear them.

You will hear a lot of South Americans in the lower portion of the band.
I would
venture the ones on AM are probably not licensed, and even some of the
ones on SSB, but I hear a lot of english speaking stations with
sourthern accents on AM that are certainly not from South America. The
Canadians can also operate voice in this portion of the band.

As to when Class B (spark) emissions were finally outlawed, during
the 1959 Geneva Radio Conference, it was agreed upon that as of
1 January 1965, such transmissions (even for distress comms) would
be illegal (at that point in time, spark was permitted only for distress,
and such a transmitter had to be the secondary rig aboard a ship, the
primary transmitter being CW).

I attended an HDTV seminar given by Hap Griffin, WA4UMU, at the
Sumter, SC hamfest this year. Hap is a great engineer with SC ETV.
The modes TV will be using VARY, at the whim of the broadcaster.
HDTV, wide screen 16X9 aspect ratio will occupy the entire spectrum of
a channel. However other, more profitable modes, will obviously be
used. 4 "standard resolution" TV channels may be broadcast. Or, one
or more of the standard resolution channels may be used for data
broadcasts (internet, for instance) that could be more profitably sold
to a third party. I really doubt US viewers will ever see a wide
screen HDTV signal broadcast over the air that would hog the whole
channel. There's just TOO much money to be made renting out the other
services.

During the question period, I asked Hap who would control my
television...me locally or my broadcaster. I preconceived the
answer...THE BROADCASTER will control all new television sets. He may
allow you to watch the infomercial channel on your serialized
receiver, just like he does now with DSS. If you wish to purchase a
movie from Channel 5's HBO channel, you may wish to subscribe by
calling Channel 5's local order line whereby they will turn on HBO so
you can watch it, as long as you pay the bill...or...you may wish to
watch one of our subscription channel movies, one movie, charged to
your credit card by our friendly operators. If you think TV service
is going to improve with digital TV, you must have slept through this
presentation. Television is going to be a BROADCAST SUBSCRIPTION
service and the FCC is going to give it to them. Your converter box
will, of course, be COMPLETELY CONTROLLED by the broadcast station,
just like your DSS box is now. Of course, we'll need the model and
serial number from your box's program card inserted in the front of it
before you can subscribe to CHANNEL 5! We'll charge basic TV service
to your Mastercard...Then, well advertise the hell out of you like

cable channels do now. Bon Appetit!

>Dick W0EX

The picture and sound at the converter's output will look exactly like
DSS does now. It's the same technology. HDTV will never be
transmitted because the broadcaster will be allowed to have 4
"standard mode" channels which is more profitable as they can SELL YOU
SERVICE. They will be in full control of your converter box, just
like DSS is....right over the UHF TV spectrum.

I haven't seen any posting about the FCC selling off 1/2 of the VHF TV
spectrum after 2006. The decision has not been made which side of the
FM band will be sold, but the FCC will either sell off Chs 2-6 or 7-13
(something like that) at auction to the same speculators who bought up
the 220 ham band spectrum. This was also part of the ETV presentation
I viewed. Selling off this spectrum will have two great benefits to
ham radio, however. It will take a lot of the heat off selling the 2
meter ham band to the highest bidder. With so much other spectrum
available, we may still be allowed our little 4mhz slice of heaven.
It may save 440, also! It will get their greedy little lawyer minds
off ham radio's bandspreads for a while, at least...if we don't die of

old age clutching our morse code in the process.

Please have your Mastercard, Visa or Discover card number and expiration date handy when calling the Channel 47 Order Line. Did you want to buy The Young and The Useless today?

As the broadcaster will be in control of what you see, this HDTV
sporting event will be, as with DTV's sports channels, a PAY TV
option. Unpaying viewers will be watching other infomercials from
other broadcasters during this period. The FCC will not stop them,
either! It was part of the deal....(c; Broadcasters, I'd bet you,
will stay as much time as possible on the 4-channel NTSC
mode...letting you watch free one channel of infomercials or BUYING
the other 2 or 3 by calling the station's order line with your
mastercard in hand. WAnna bet?

There will be very little "free" commercial television. They may let
you watch old reruns of Mr Ed on the free channel. The ONLY reason

they are so positive about this new digital system is it leaves the BROADCASTER in control of YOUR television set for PROFIT. FCC is turning over-the-air broadcast TV into your DSS system. Non-paying subscribers will probably get 3 or 4 free channels of old reruns and stupidity like they do now. We'll sell the rest over the phone downloading the turnon codes at will to your "converter box" or digital receiver. ALL receivers will be programmed like DSS is now.
>
>Broadcasters are taking an enormous gamble on

There will be many new billionaires in the TV biz. Your perception that they are going to give it away like they are forced to do now by the current technology is wrong....all wrong. Business does everything to increase profits...Digital Television is one of those. Just watch it!

4303. Quiz answer: Who first invented the electric motor?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <662l13$88i@news.Hawaii.Edu>
Source record: 185234

Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote:
>Who first demonstrated that electricity can be converted into mechanical
>work, and in doing so, created the first electric motor? What year?

During the summer of 1821, Faraday hypothesized that there should
be a tendency for a wire to describe a circular path around a
magnetic pole. To demonstrate this effect, Faraday set up a
vertical magnet with its upper pole projecting above the
surface of a trough of mercury. A wire was arranged above
with its lower end free to revolve in the mercury around the
magnetic pole. When a current was passed through the wire, it
revolved around the pole, thereby demonstrating the conversion
of electricity into mechanical work and constituting the first
electric motor.

Does not surprize me, personally I like the guy but if he wants to talk about cold fusion and curing aids he should start a cold fusion magazine or prove his miracle cure "bio-rectifier" cures aids. Otherwise shut up about it and publish a ham radio magazine.

He had me sold for a while but his repetitive editorial led to my cancellation of my subscription to 73. As much as he bad mouths the league, they produce a magazine with 10 fold the infomation than 73. He's actually run the bio rectifier in two issues now as the headliner, completly reproducing the schematics and pc layout. No thank you, I'll spend my money somewhere else.

Actually, if you study history, most of the colonists in early
America were loyalists to the crown. It was something like 3% of the
population that wanted independence and freedom, all others liked being
surfs and serving a king, paying heavy taxes to the crown.....sq

(the minority won, mostly because they fought for freedom while the
hessian and british soldiers fought for money. Fighting for an ideal
makes you want to fight harder, suffer more, and give a damn. The Hessian
mercenaries and british soldiers fighting here were only interested in
getting paid for their service, they didn't care if they won or lost. The
Americans however, were willing to die for what they believed in, while
the hessian mercinaries and british soldiers wanted to live at all cost.)

I'm reading this thread on the .uk group. It's not quite so easy here.

1) Try desperately to find an adult education college that does the
Radio
Amateur's Exam, and wait until May or December - they are only run
twice per year.. and as you have to book your exam a month or two
in
advance, the wait could be even more irritating.

2) There are some books on taking the exam, but they're not much use
as
blind memorisation machine-code, they're more like source-code.
Usual
thing is to do an evening course.

3) The exam itself is multiple-choice, but it's not that much of a
guessing game as the probability of a random selection resulting
in
a pass is extremely low. However, some of the questions are very
poor,
and if you really know the subject sometimes none or all the
answers
may be correct. Unfortunately the question pool is kept secret and
queston papers are not supposed to be removed by candidates, so
the
questions are effectively protected from even constructive
independent
review.

4) Wait a month or two for the results to be released.

5) If a fail, well, you've just about got time to get booked in for
the
next exam, given all the various delays, if a pass, then the usual

to look for a second-hand rig, any second hand rig. Prices here
are
roughly double the US norm. Also the exam fees are steep and some
exam
centres only allow entry from those who attended their courses.
Prices
for course and exam vary, but think of well over a hundred dollars
in
some areas.

Anyone who navigates this is clearly fairly dedicated, and has had
to
wait around long enough to have read a fair amount about radio, even if
just to alleviate the boredom ;-)

> No need to learn electronics theory. No need to become acquainted with
> the world of amateur radio via an elmer. Just get on the radio and talk
> because, after all, that is what amateur radio is all about today.

The amount of radio theory in the highest class licence grades in
both the US and UK is pretty basic, and not enough to homebrew even the
simplest setup without other sources of knowledge, but it is a
beginning. Anyone who wants to get interesting results is going to have
to explore a bit and learn more. Those who don't seem to get bored and
go away, but at least they had a chance to try it, and some of them do
go deeper and stay.

I look upon all the hernia operation QSOs on 80m and some of the
inanities on 2m as slow acting filter mechanisms that steadily weed out
those whose dedication is less than sufficient ;-)

Cheers
David GM4ZNX

Let's be realistic!! NO callsign datebase including FCC's own is
ever going to be perfect. Most of these sites simply mirror what is
available from the FCC's FTP site. If a particular entry is messed
up there, these sites will mirror it. There have been some problems
with some these mirror sites in the way they interpret the SyBase
formatted FCC listings, but that is no reason to be harsh on these
people. They're basically offering a free service and it unreasonable
to assume that they can put the sweat equity into responding to every
individual beef about it or spend a great deal of time making sure
all the "i's" are dotted and the "t's" crossed. At UALR, it's a
volunteer effort and no doubt they receive a ton of email concerning
it, so if they don't respond to a particular gripe about it, I don't
think it is out of arrogance, being rude, or ignorance, it's simply
that no one is "there" all the time to respond to complaints. None
of these sites claim they are dead accurate, but I think they do try
their best within time/money constraints imposed on them.
If you don't like UALR's callsign server because you think it is
inaccurate, don't use it!! Use some other callsign lookup, purchase
a callsign CD like Buckmaster or QRZ, or use a pulp callbook despite
the fact they are no longer published. I think UALR does the best
they can with the resources available to them for which they deserve
much credit.

Unlikely! It's VHF/UHF that the commercial pressure is on.
Demand for HF use dipped due to satellite comms, rose again when
satellite-killer technology arose, and then dipped again when the
changes in the eastern bloc reduced the risk of any conflict between
nations with such capability. Our greatest risk is the loss of
everything EXCEPT for HF and the extreme microwave bands.

Cheers

Ken, (and I think I speak for many) I pity you.

People like you permitted McCarthy to have his way.
People like you blame the victim of injustice.
People like you just sit around and smugly proclaim "That's the way it is!"
and can't be bothered to stand up to make it any better.
People like you sat around and said, "But England protects us...why do we
want freedom. We don't like it either but that's the way it is."

You're wrong and you have no courage. I just want you to know that.

Oh, and by the way, don't call us kids. While you PLAY with your overgrown
walkie talkies with your friends, we're out here genuinely suffering trying
to make America more free, which will benefit you in the end.

Check at the local electrical distributor. That's where I got mine. It mounts in a standard knock-out in the pannel. You need one for each circuit to be protected (they go after the breaker).

5 WPM is NO-CODE??

If you had to go thru what I went thru just to get the 5 WPM, you would change you mind about it being a no-code. But one thing about it, I did pass the 5 wpm code test. For sum of the folks out there the 13 and 20 wpm is a easy thing to them. For sum it like music, but for sum of us that made it, it was pure hell. Yes, I can get the form legally to not have to take the rest of the code test, but why? To have folks think I tryed to get out of it. One thing I can do that sum of the extra and advance class hams can't do is repair and build a radio that works. I can pass the tech part all the way up to extra!

So what I am saying, is that the little remark that 5 WPM is NO-CODE is bull.

This is my own thoughs and no one elses..

From: rmuth@hope.gordonc.edu
Message-ID: <881157945.22346@dejanews.com>
Source record: 185253

Greetings! I need some assistance with programming a Regency RH256B VHF two-way. I know that it can be done if one "activates" a jumper. But, there are two questions: 1 - Where is the jumper? 2 - What are the programming steps? (I assume that it is similar to programming a scanner, but I have no idea how to put in the PL Tone frequency.)

I appreciate any, and all, information anyone can give me on this. Please reply via e-mail (at least cc me via e-mail) as I do not have access to a news server that carries this group.

Regards,
Richard

You know, I agree with that statement that NO CODE is no big deal - let anyone in HAM. As For the HF bands, They are worst then the 11 meter band. Just listen to 80 meters some night. It will turn your stomach. I do believe, 5 words per minute should be a basic requirment for a true radio operator, but if there was no code for all, I don't think much would change. There will be the "MAGGOTS", who are already here.

Stan NI1Z

PS: I have a friend who won't go for his novice because he don't know the code and he says its the code part of ham that he respects. I wish I can convince him to get his no-code novice.

I would recommend that you stop underestimating his intelligence.

> I think you're the one that should go away. Permanantly.

I know you do. That would be easier. If everyone we didn't like would just
go away. Wouldn't it be dreamy???? That's the way people like you think...
whatever frightens you or is unpleasant, just make it go away. I believe the
Nazis made a few million Jews and others go away. I believe we, as Americans,
made a few million Native Americans go away.

I instructed you to leave people alone, implying that if that meant you left
this thread well so be it. You respond by suggesting I should be imprisoned
forever (IE the Permanently remark). Does the thought of fellow Americans
being imprisoned forever for violating an Unconstitutional Federal Regulation

make you feel all warm and fuzzy inside? What kind of sicko does that make YOU?

In either case, you're not trying to protect him; you're trying to protect the government and corporate America. Why? What is your vested interest?

Actually, its not an FCC auction; it requires the proper donation to the Democratic National Committee (DNC). If your donation is high enough, you can even get to stay over in the Lincoln bedroom at the White House where an HR2510, Astatic D-104, Texas Star DX500, and Moonraker have been installed for your skip-talking pleasure. Furthermore, you can operate without any fear of the FCC because, at the White House, there is "no controlling legal authority."

Experienced with GLASS-MOUNT antennas?

I once bought a glass-mount antenna for 2/70 cm ham bands. It kept a reasonable SWR, but did not receive or transmit well at all. Has anyone out there experienced the same?

What are the pro and cons to glass-mount antennas--even for cellular?! Are they effective scanner antennas? What about the glass-mount CB antennas?

Eric (Please email me a copy of your post)

Finally, the broadcasting industry, their investors and all their supporters in government have figured out how to force every TV viewer to have a "pay" box attached to every existing TV in the country, if not the world. This marks THE END of free, advertiser paid off-air television as it has existed since the beginning of television broadcasting.

From the first, I never believed that the public would willingly pay the projected cost of HDTV willingly, given the reasonably good quality prevalent in current NTSC broadcasts in most places, and I still believe that. There is just so much you can improve on 'good', and I know I don't see any attractive advantage to HDTV, however 'clear' the picture.

It now becomes clear that the public will indeed have a choice-pay up or don't watch TV at all. No more Advertiser-commercial-paid TV for free.

Now all the push for HDTV over the past few years is explained.
Mr. Hundt was apparently very successfull in his apparent Quest. What remains to be seen is how well the mandated change holds up.

Used, Out of Contract cell phones are widely available at low or no cost.
It would seem to me that they could be converted to the 900 mhz
allocation and used in amateur applications. Phone to phone
communications would be possible but repeater use would extend
their range.

The first problem would be that someone would just have to connect
a phone patch thereby waking up the cell phone companies
and causing us no end of conflict. This would have to be resisted at all cost.

But - The phone phreaks have assembled enough information to permit
reprogramming and the burning of new chips.

I do not have the technical capability but it seems like a good idea.
There is very little conversion of other services hardware going
on and this looks like an opportunity.

>I keep waiting for some connection to amateur radio equipment or policy
>in this thread.

TV broadcast is the largest consumer of spectrum below 1 GHz. When
that giant rolls over, all the lesser players have to pay attention. Of
particular interest to amateurs, the final bandplan releases the spectrum
currently assigned to TV channels 2-6 and 63-69. That 72 MHz of freed
spectrum may be able to relax some of the pressures placed on amateur
VHF/UHF allocations by the little LEOs, and others, desiring new spectrum
below 1 GHz.

In addition, the switch from analog NTSC to DTV has considerable
implications with regard to TVI susceptability. That also is of interest
to amateurs. And it isn't all good news because broadcasters will
be sharply reducing power, so over the air TV will become more of
a weak signal mode than it currently is.

Offsetting that somewhat is the more robust nature of the modulation
and coding. But DTV will *not* use the sort of robust FEC which would
make it immune to all types of interference (that would require more
bandwidth for the coding overhead than is available in a 6 MHz channel).
And the 8VSB modulation chosen is also not an ideal choice for operation
in the face of certain types of interference. If DTV is successful in luring
many viewers away from cable, amateurs are bound to face new TVI
challenges.

We may also see the reverse situation, IE DTVs interfering with amateur
equipment. A DTV receiver will be more computer than TV, and we already
know the RFI computers can generate. The sweep rates (and magnitude of
sweep currents) for the large 16:9 HDTV displays will also produce a new
level and type of potential RFI to amateur operations.

So it is a good news, bad news situation for amateurs. We need to be
aware of how we are likely to be affected by these sweeping changes
in the TV broadcast market. And we also have to be aware of who our
new neighbors will be in the newly vacated TV spectrum. There may
be compatiblity issues involved with them too.

And finally, the mass market introduction of a new technology will
have implications with regard to what will be cost effective for amateurs
to adopt and adapt from it for our own uses. High speed RF modem
technology will be sharply impacted by the mass market DTV receiver.
A new generation of fast and cheap RF modems based on DTV

technology could have a major impact on the sorts of operations amateurs may pursue at VHF/UHF.

>Just watch it!

Larry, you don't have a good grasp of broadcast economics.

Pay TV is a high risk low return retailing of programming. With
the exception of a few boutique events, it is low margin for the
content deliverer, and has the high overhead of retail sales.
The industry average annual ROI for Pay TV is 3%-6%, and only
about 30% of Pay TV events break even. (Of course there are
a few boutique events which do very well indeed. But there is
no daily market for that.)

Subscription TV has lower risk, higher volume, but still a fairly
low ROI. It is still retailing of programming, but more analogous
to K Mart or Walmart style retailing than is pay per view. Annual
ROI is on the order of 6%-10%, and "churn" still makes cost of
sales fairly burdensome.

But free advertiser supported TV is a horse of a different color.
The industry average annual ROI is 22%. The free broadcaster is
selling a different product than the pay TV delivery agents. He isn't
retailing programming to viewers. Programming is something he
buys as bait to lure in the product that he actually sells. That's the
audience.

The business of the free TV broadcaster is selling an audience
demographic to an advertiser. And advertisers are willing to pay
handsomely for that demographic. In prime time, advertisers pay
(collectively) an average of $32 per viewer per hour. And the
broadcaster incurs very little overhead cost of sales to get that
sort of revenue stream.

There are very few pay TV events which can command $32 an
hour from viewers, and no subscription TV services which can
command that sort of revenue. But it is the routine meat and
potatoes of the "free" broadcaster. He understands this business
very well, and knows where the large revenue streams live.
He isn't foolish enough to throw that away to get a lower ROI
at higher cost and risk by trying to retail programming to viewers.
He leaves that to the niche providers who fight over the fragmented
crumbs outside the mass audience.

I've been doing this for over 30 years, and I know how it works, and
where the money is. It isn't in retailing programming to viewers.
You can be very sure that the programming with the largest popular
appeal will continue to be "free" programming broadcast to anyone
who will tune in. The broadcaster will make sure of that, because
that's where the money is.

4339. Kenwood TS870 Mods ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-03 00:00:00 UTC
From: Jim <n5jim@texas.net>
Message-ID: <34859A0C.EF8D2EBF@texas.net>
Source record: 185270

I have seen the mods for the TS870 on several web sites (QRZ) and I have not been able to find the resistor that they are referring to in the mod text. They refer to R244 that is supposed to be located in-between IC12 and IC23. My TS870 does not have this resistor on the Control board.

If anyone has successfully done the TX mod on their 870, I would appreciate if they could send the mod to me.

Thanks in advance,

Jim Seiders N5JIM

No, it is not worldwide. (You didn't think the US and Europe would *really*
agree on a single standard did you? The Not Invented Here syndrome is
way too strong for that.) The US and Europe have settled on totally
incompatible transmission standards, and Japan has settled on one
that takes a bit from each of the others, but is incompatible with both.
It is likely that the rest of the world will adopt one of these three standards,
but likely a different one of the three on a country by country basis.

>If this is worldwide, it will really help us. We generate most of the
>worlds programming. Lots of Marks, Francs, Pounds coming back here (or
>at least the West Coast). It will also be nice when I am in Germany,
>to use the same set and DSS system as I use here. Digital TV (DTV) to
>me is a blessing.

The world has agreed on a worldwide *production* standard. That's a
different thing from the transmisson standard in the digital era. So
worldwide program distribution will be much easier than in the past.
And as you surmise, this will largely be to the benefit of the current
large program production companies. (Though it does open a niche
for the small producer because he won't be burdened with distributing
different versions of the same programming. Only the major companies
can afford to do that now.)

But you won't be able to take your US transmission standard TV to
Europe and watch European transmission standard broadcasts.
The modulation formats are totally different. (Truth be known, the
European choice has a number of significant advantages over the
US choice. Shades of NTSC versus PAL all over again.)

Once everything is back to baseband bits, the video signals are
the same, so you *may* see more multi-standard sets produced
which will decode the different transmission standards back to a
common baseband. But that's likely to be an extra cost option.

Amor,
Are you a licensed amateur radio operator? Have you
passed any of the tests? Do you have a callsign?

> "pro-technology" experts??

First, let me state again, for the record, that I DO NOT favor, nor would
I support any attempt to ban the use of Morse from ANY ham band or sub-band.

With that said, it is appropriate to note that practical digital methods
which are well understood and NOT "rocket science" could make far better
use of spectrum than Morse. In fact, at data rates comparable to 20wpm
Morse, they could provide FAR better weak signal performance.

The problem is two-fold ... first, most More enthusiasts are so stuck in
the past that they are not technically knowledgeable to realize or even
accept these facts. Second, they have a BIG hang-up about doing things
manually (alternate term: "the hard way") ... the use of modern digital
techniques like FEC, etc. could make moonbounce relatively easy, even for
folks without acres to build the huge antenna farms and without running
the legal limit (or then some) as old-fashioned "brute force" methods
require ... but the olde fartz prefer to swat flies with 16 pound sledge
hammers and consider more elegant means "unsporting." How comically pathetic!

DON'T be so proud. He wasn't getting on the case of amateur
operators, he was getting on the case of those who POST HERE. Notice
he said "almost" makes him embarrassed to say he is an AO. Luckily,
this forum is NOT representative of most of ham radio. Just as the
guttermouth lowlifes are NOT representative of most CB operators.

4351. Re: Majority is Against Morse Code. Its A Dead Issue

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-04 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <34874539.2D7570C8@aloha.net>
Source record: 185073
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Note, in this I will attempt responses to several of Jim Cummings
statements regarding my postings.

Jim Cummings wrote:

> Jim Reid wrote:
> >

> The current international definition of the amateur radio
> service (within the extant ITU treaty) contains the
> words "international interoperability",

Jim Cummings wrote:

"This statement is untrue. The current definition for the amateur service in
the ITU regulations within the ITU treaty states as follows:

""Amateur Service: A radiocommunication service for the purpose of
self-training, intercommunication and technical investigations carried out by
amateurs, that is, by duly authorized persons interested in radio technique
solely with a personal aim and without pecuniary interest. ""

As everyone can see, there is no concept whatsoever in the international
definition of "international inter-operability";"

Reid comment:
Hmmmm: International treaty with the word "intercommunication"
as part of the Amateur Service definition. I t really is a BIG stretch
by them, and me, to use the term "international interoperability". And yes,
mea culpa, the words are not in the treaty.

Cunnings continues:
"that concept [international-interoperability] was introduced
in the report that was issued from the IARU conference in Singapore in 1994.
If I may be so blunt, the use of that term as a means of justifying Morse
code testing, is, in my estimation, a panacea by some desperate amateurs, in
an international forum, attempting to justify Morse code testing in the face
of changing technology and the application of acceptable spectrum management
techniques."

"I would be pleased if Reid would be good enough to acknowledge at the very
least that his statement 'The current international definition of the amateur
radio service (within the extant ITU treaty) contains the words
"international interoperability",' is, at the very least, misleading, if not
untruthful. Indeed, I would be pleased if he would also acknowledge at the
same time that the source of that is only from within the amateur service,

and is not based in any policy or regulatory documents from a national or international government body."

Reid comment:
Of course, no problem:... international intercommunications does not equal international interoperability. And yes, the words "international interoperability" were made up by some "desperate amateurs" in an international forum; and yes, the source is from within the amateur service.

Cummings continues:
"This connotation in the report accentuates the misleading nature of the term of "international inter-operability". This statement purports that there any amateur within the global community ought to be able to communicate with any other and that this concept is the policy of the ITU. " (baffelgab comment snipped)

Cummings continues:
"As I have shown above, the foundation of the statement, i.e. "international inter-operability", is not embodied in the ITU Radio Regulations, or any other national regulations, for that matter. The only place where "international inter-operability" is mentioned is in a report issued by amateurs. It is deplorable that Reid would elevate a notion, authored by amateurs, to the status of an international policy or regulation."

Reid:
I believe we now are beginning to see into the mind of Cummings. Anything presented, offered, suggested, or notions by amateurs is clearly suspect. Wonder where governments are supposed to learn about what might be desired by those being regulated?

Now, lets look at the rest of what the FASC of the IARU is "suggesting":

(Of course Cummings is now on record with his opinion of the IARU: to me, he wrote:
"Well, if you go rolling in a pig sty, you are not going to smell any sweeter by claiming that you did not contribute to the filth. In other words, since Reid has decided to assume the role of apologist for the IARU, it is no surprise that he would share in the odium.") Wow!

"IARU FASC committee's Nov. 17th report posting:

"The fundamental characteristics that distinguish the Amateur Services from other radiocommunication services are, first, their non-commercial nature, and second, that the participants are operators having demonstrated qualifications. The service-specific regulations should reinforce these characteristics."

Part of the FASC proposed new wording of Article S25:

"ARTICLE S25

Amateur Services

Section 1. Amateur Service
S25.1 1. Administrations shall verify the technical and
operational qualifications of any person wishing to operate
an amateur station. A person seeking a licence to operate an
amateur station shall be required to demonstrate a knowledge
of the topics specified in ITU-R Recommendation M-XXX."

Reid comment:
(Note the wording, "shall be required", followed by reference to a
specific ITU Regulation reference. Thus the following comment:)

"A further consequence of the qualifications incorporated by
reference being mandatory is that the concern of what would
appear to be the majority of societies and a majority of
amateurs where surveys have been undertaken that a compulsory
Morse qualification should be imposed for operation below
30 MHz would be met."

Reid comment:
So ORACLE gets their request satisfied, the CW test requirement
wording is removed from the treaty text; but the desires of
the "majority of societies and a majority of amateurs" surveyed
would be satisfied by the mandated demonstration of CW via
reference to an ITU regulation.

Free of all comment, the following is a copy of the actual
FASC committees suggested new S25 wording:
From the IARU web site,

"(Draft by FASC, October 1997)
ARTICLE S25

Amateur Services

Section 1. Amateur Service
S25.1 1. Administrations shall verify the technical and operational
qualifications of any person wishing to operate an amateur station. A person
seeking a licence to operate an amateur station shall be required to demonstrate
a knowledge of the topics specified in ITU-R Recommendation M-XXX.

S25.2 2. (1) Transmissions between amateur stations of different countries
shall be limited to communications incidental to the purposes of the amateur
service or of a personal character.

(2) Except with the authority of the relevant administration granted to meet a
particular operational need, transmissions between amateur stations shall not be
encoded for the purpose of obscuring their meaning.

S25.3 3. Administrations are urged to take the steps necessary to allow amateur
stations to prepare for and meet communication needs in the event of a natural
disaster.

S25.4 4. An administration may, without issuing a licence, permit a person who has been granted a license to operate an amateur station by another administration to operate an amateur station while that person is temporarily in its territory, subject to such conditions or restrictions it may impose.

Section II. Amateur-Satellite Service

S25.5 5. The provisions of Section I of this Article shall apply equally, as appropriate, to the amateur-satellite service.

S25.6 6. Administrations authorising space stations in the amateur-satellite service shall ensure that sufficient earth command stations are established before launch to ensure that any harmful interference caused by emissions from a station in the amateur-satellite service can be immediately eliminated.

It has been pointed out that the Committee has not commented recently on the suggestion offered in the Discussion Paper that the definition of the Amateur Satellite Service would be improved by the deletion of the words "on earth satellites". That definition is not presently on any proposed agenda for a WRC, but it has met almost universal support. The Committee will not overlook the matter.
It is stressed that the matters set out in this Report are only raised for discussion, and do not constitute a proposal that any Society should put to their administration.

No position has yet been formulated by the Administrative Council. It will be considered at the Council meeting to be held in Venezuela in October 1998, following the Region 2 Conference.

The Committee invites further submissions regarding any aspect of the matters raised by the review of S25, particularly expressions of opinion on the matters raised in the Second Report and this Report. "

End of quotation from IARU FASC web site posting.

Reid comments continue:
Note that this proposed "new" definition of the "Amateur Service" specifically distinguishes us from commercial services and that operators licensed in the Amateur Service have demonstrated qualifications. Also that our transmissions may contain only information "incidental to the amateur service or of a personal character."

Delivering "lots of information and complex ideas" is not an inherent part of the amateur service, by definition or in actual fact of practice within the HF bands.

Notice also, that in this proposed future definition of the amateur service, the wording about technical investigations and providing a pool of "trained operators" for governments has been dropped, along with language about advancing the radio art.

However note the new emphasis to
the emergency communication value from the Amateur Service
and the need for governments to foster/further/encourage
the preparation for the use of the Amateur Service in
times of national disasters, etc.

Summary:

It seems to me, that those working on suggestions for new rules
and principles of the future of amateur radio in the 21st
century are well aware of the present state/situation within
the HF amateur band allocations. They are also aware of the
nature of today's amateur service and mindful of the desires
of a majority of those within the service who have taken the
time to advise the FASC committee, their local societies,
and participated in whatever polling may have been available
to them. That is, maintain a CW testing requirement.

So, it would seem the FASC of the IARU is, in fact,
following the wishes of the majority polled and surveyed
among various amateurs societies of the world. However,
Cummings apparently feels such is not in the best interests of
governments.

What the FASC committee members are evolving
towards the day, now maybe in 2001 or whenever, that
the Amateur Service is again a formal agenda item at a future
WRC conference in Geneva, will clearly reflect rules
and regulations that will most favor the advancement and
well being of the Service. That its purpose will be
fulfilled by qualified radio operators of demonstrated
capability.

Note also that increasing the numbers of licensed
amateurs does not seem to be a specific goal of the FASC.

Note on bowing to authority: neither the IARU nor their FASC has
any authority. The ITU treaty has authority. However, the delegates
to WRC conferences in Geneva look to committees for answers as
to what is desired/needed; same process in all legislative bodies.
And, the FASC is the most visible, international committee now
looking at the both the definition and rules of the amateur radio service,
at least with repect to the international aspects of HF amateur communications.
If reporting about what they are doing, suggesting puts me in a pig
sty, so be it. I have certainly sent many a communication to both
the FASC and to my regional director of the ARRL. Know of
no other places to put my opinion now and my belief that
the CW test ought to be retained for HF operating licenses.

Really James, you're going to have to deal with this infatuation you have had all these years for Porkbutt. He is solidly heterosexual.

May I suggest a local night spot in your area where you could meet "someone" with a similar sexual orientation as you have.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

Actually Jim, I am pro-CW. Unfortunately for your posting, I am
also pro-rationality/logic/reality. The people you quoted are not.

> All that stuff I quoted has been considered and, apparently
> accepted by those who vote on such things, internationally.
> Perhaps you had better check out the IARU web site.

I don't doubt what you posted is true. It's just obviously not
valid. Knowing Morse code does one absolutely no good without
a CW rig and maintenance of the CW skill. It is absolutely
false to say that someone who passed a Morse code exam 50 years
ago is guaranteed to still be capable of CW. More items would
have to be forced on all individuals to ensure that. If the
Morse-Code-Testing-Preservation Society were serious, they would
be forced by logic to call for additional rules/laws to ensure
that every HF ham owned a CW rig and was periodically re-tested
to maintain his/her Morse code expertise. Simply maintaining the
Morse code test has never achieved and will never achieve the stated
objectives of the pro-code-testing crowd. Anybody who disagres
with that statement is free to present proof that a person who
knows Morse code but has forgotten it and/or has no access to a
CW-capable HF rig can fulfill any of the stated objectives.

Hi again Jim, I forgot to point out that "those who vote on such
things" are perfectly capable of logical evasions, namely
argumentum ad populum - appeal to the mob and
argumentum ad verecundiam - appeal to authority
"Acceptance by those who vote on such things" is the very reason
our once great country is in such sad, pitiful shape.

Huh? When was the last time you really listened to 10 meters? Dave,
give a listen between 28.000 - 28.300 and you will hear many illegal
CB operators causing problems for the legal operators. Every weekend
that I am on 10 meters, I hear many operators from South America
transmitting AM signals without a care in the world. The 10 meter CW
band is a hard band to use with all of the CB QRM.

If you consider that freebanders are now found from 26.000 - 28.000+,
they now have more bandwidth that the 10 meter amateur radio band! If
the FCC doesn't get involved in the problem of wanna-be hams taking
over frequencies with any regard, we can all look forward to losing
even more spectrum.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

HAIL TO THE OLD ANDERSON HAIL HAIL HAIL

>
> For that matter, where was Adell during the Gulf War of late
> 1990/early 1991?

I can, however, picture you, geezering back at the TV screaming, holy
shit boys, we
didn't do that in my days.. no sir rebob. we stormed the trenches,
bayonets gleaming in the sunlight, screaming kill the kaiser. wow that
must have been a scene.
Personally, I was up late at night, putting thru personal phone patches
to from the gulf to families here in Northern New Jersey as well as
reading about it in the papers, I don't watch a great deal of TV. I
leave that up the those such as anderson who find it increasingly hard to
move around as their bodies age steadily faster

> Did he see the TV news showing the USN
> actively using telecommanded pilotless drones for spotting
> naval gunnery? Both the US Army and US Navy have been
> using such for over a decade...and the drones are inherently
> capable of recon sorties. [testing had begun in 1975]

Yes, I did. The report, you old fossil, was that there was an effort to
increase the
use of these drones and the old fartz, anderson's contemporaries, who
think that piloted aircraft are the only way to do
things. The article was published in light of the increased risks being
taken to overfly Iraq with U2 missions

The analogy, since you do so love them was that it's not only amateurs
that are resistant to change. It was, however, obviously lost on someone
of your advanced age and decreased eyesight.

Learn to read better

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Sorry, just can't let this one by:

Ummmmm...since when is it illegal to hate or be discontented with the government? And in what way does hating the government or being discontented with it justify breaking down a guy's door, handcuffing him on the floor (pointing a gun at his pets and yelling, "freeze or I'll shoot" to be funny or something) and then taking away everything electronic that he owns?

And, if pirates are such evil criminals, why are they only RARELY charged with an actual crime? Most of the time their stuff gets taken under civil forfeiture laws but they never get tried in court for their alledged crimes.

Sounds like they're guilty until proven innocent to me.

What's next? Maybe burn someone at the stake for having an 'evil eye'?
Round up a bunch of minorities and put them in a camp?

Do you have any idea how stupid you sound? You basically just said that
people who oppose the government should be punished for it.

You're completely out of your skull. Like I say, when the FCC pulls your
allocations and auctions them off for commercial services don't come crying
here. You won't get alot of sympathy.

Remove the detatchable face and the bottom cover. Look at the pcb that is vertical behind the the front of the radio. There will be 5-6 sets of solder pads numbered 0-whatever. There will be 2 chip resistors on the first two pads, the rest are empty. Remove the resistor on the first pad (the one closest to the grounding spring-should be #0). The new range should be VHF 136-173.995TX 118-174RX UHF 410-469.995TX 300-470 RX.

This is directly from the Kenwood Supplementary Info sheet
TM-V7A Beyond MARS Modification.

Oh, for crying out loud! Get over yourself, kid. Pirate radio is
about as much about "saving America" as was Timothy McVeigh, although
on a much lower level of insanity.

"Saving" America involves a lot of hard work in the political
trenches, not playing silly defiance games that only get you blasted

by the existing power structure.

Horrrray!!! Yahoooo!!! Maybe we can get our HF phone bands
cleaned up after all!

Most of the new hams
>are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and
>technology, and the "mechanics" of an HF
station and the "feel" for
>propagation and international contacts.

And they won't, for the forseeable future (perhaps for the unforseeable
future as well) unless they stop whining and start learning the Morse
code! Until then, nature takes it's course, and the process of
natural selection will continue to weed out those who are too
intellectually and emotionally weak to accept the challenge of
learning and gaining proficiency in the Morse code!

The implications of this will not
>intirely be felt for another 15 to 20
years.

True. By then, it may be possible to have a normal, intelligent,
satisfying and rewarding QSO on the HF bands, in any mode,
without the chaos imposed by hoardes of "consumers" all
struggling to experience the power of HF phone operation!

The U.S. needs half a million hams, max. Anything above that
is a potential problem. We need quality, not quantity. If the
code requirements are keeping YOU off of the HF bands, I see
that as a potential benefit to the service.

I also have a Chevy Lumina APV mini van with tinted windows, and am using a Radio Shack dual band glass mount antenna. It works just fine. I have used a Radio Shack HTX-212 with it on 2 meters and there is no problem, and also have used a Standard dual band HT with A Mirage BD-35 amp and it works good on both 2 meters and 70 cm. The antenna is mounted to the left side glass behind the door.

This mounting was the only viable solution to putting an antenna on the car because the body is plastic. In my other vehicle (a Chevy Astro Van) I have used a 5/8 wave mag mount for 2 meters, and am currently using a tri-band Comet, and both antennas on the Astro work a little better on 2 meters than the thru glass on the Lumina, but the difference is not that great.

Easy, Carl: Perhaps for the engineers among us, the content lacks,
but for a dummy like me, I at least get a dose of what's out there,
what others are doing, and an idea of the possibilities.
I also find the regulatory information section interesting and
valuable most of the time, and of course, the advertising section lets
me know what the Big Guys are letting out of their "skunk works."

> ... and it pisses me off that they take my money every
>year but don't represent my interests ...

But they may represent the interests of others, which are no less
valuable or important to those folks to whom those interests belong --
no less so than our own interests are important to the rest of us.
It seems to me that the ARRL is providing at least an active
organized presence, whereas, without that presence (in D.C., in the
states, regions and wherever), no other well-organized presence
apparently currently exists to offer even a fledgling representation
(though we are working on that with NCI!). I could be wrong, not
having every scrap of information available to me; if that is the
case, I'd like to know what other groups, movements and activities are
currently in motion for the betterment of Amateur Radio, for my own
information benefit and for the benefit of this ng.

It took me by surprise: I thought "is that THE Wayne Greene?"...

Wayne Greene was on Art Bell's syndicated AM nightime talk show. I wouldn't call that small. We're talking megawatts of multi-frequency widely propagating MW coverage. There were a lot of callers. That show will probably be re-aired many times in the future.

I'm glad there still is a 73 magazine. You can always turn the page or not buy it if you don't like it. But at least the choice is there, and choice is good. In today's dwindling ham market, it's surprising. The more, the merrier.

> Ever call CQ on a digital mode other that RTTY??

Last summer, N5AQM took a 4 month sabbatical from Phoenix to NW WA in a large circular path. We set up PACTOR, mobile/portable for him and fixed for me on 7.075 MHz. We were never out of daily contact with him using a mobile 40m Hustler often running 5 watts. The worst problem we had in staying in contact was multitudes of hams calling CQ using PACTOR on top of us. Many uninvited hams used my MBO during those 4 months. I have a list of about 40 MBOs on that single frequency alone with 100's on other popular PACTOR frequencies.

Any night, get on 7.06-7.08 MHz and call CQ in PACTOR. Someone will respond. There are a magnitude more PACTOR stations between 7.05 and 7.1 than there are CW stations between 7.1 and 7.15 MHz any night of the week.

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the experience of HF methods and technology, and the "mechanics" of an HF station and the "feel" for propagation and international contacts. The implications of this will not intirely be felt for another 15 to 20 years.

With the majority of people against Morse Code testing,
It is unlikely that it will last very much longer.

The old guard will eventually die off. Silent Keys really means silent keys.

The only question is: When?

The will of the people is heard eventually. Especially when it is the right thing to do. Many of us CW-lovers welcome abolishment of code requirements. It's the right thing to do now.

Abolishing the Morse requirement is the right thing to do.

> exam or written.

California now requires re-testing when renewing after 10 or 15 years or so, I just had to do it this year. New photo, new electronic fingerprint, eye test, written exam. Not the driving test. This now applies to everyone in California.

I have a fairly spotless driving record.
The only moving violation I ever had was for "going too slow". Pulled over by a rookie for going 40 in a 45 zone in 1976 in Tennessee. (Was it that I was trying to bust a pileup while mobile on 20m-CW which caused me to go so slow?) :-)

Have fun.

Jeff Herman "graciously" responded:

> Didn't you ask them their location? Are you sure you really "worked"
> them?

Jeff,

Are you always so helpful, or were you feeling extra nice that day?
A glance at the "Amateur Code" reveals some words about "friendly"
and "helpful", which you may have skipped over in your study of the
subject.

QTH is not part of the contest exchange, and the prefixes in question
are not in "everyday use" for those countries. His question was
completely legitimate, and did not deserve your sarcastic response.

Eric:
Even dummy loads exhibit excellent SWR, but they are poor radiators to say the least! Best bet if you don't want to drill holes in the family wagon, you could opt for a mag mount. Another option is a clamp on type mount for the trunk deck. I've had good luck with both, and made some slight improvements on the clamp on mount by attaching a heavy ground strap from the base of the mount to the car body.

>
> But ALL that Cummings has to say ignores the above VERY differences!!
> If you read my post, the differences are explained.
>

I do not dispute that there are differences in the roles and responsibilities between the amateur service and the other radiocommunications services, nor do I ignore them. However, I take issue with Reid's erroneous notion that because of those differences, a comparison of technologies used by those services can be ignored merely because of those differing responsibilities and missions.

> Amateur radio exists for the purpose of Personal Intercommunication
>
> That is the purpose of the service.

No Reid is incorrect on this point, that is not the purpose of the amateur service. I shall quote once more the ITU definition:

:Amateur Service: A radiocommunication service for the purpose of
:self-training, intercommunication and technical investigations carried out
:by amateurs, that is, by duly authorized persons interested in radio
:technique solely with a personal aim and without pecuniary interest.

A definition has to be read and understood in its entirety; it is incorrect to pick and choose a definition, even modify it, in order suit one's private agenda. That sort of behaviour is called intellectual dishonesty. For example, the ITU definition for the amateur service states that intercommunication is but one of its characteristics, and is not limited to "personal" intercommunication. If it were to be for personal intercommunication, then indeed, rendering assistance in an emergency would be unlawful because such intercommunications is not personal, i.e. on behalf

of a non-amateur entity. For that matter, automatic forwarding within the digital networks would be illegal because such communications is not personal (indeed, they are machine-to-machine communications.) Furthermore, to ignore entirely the characteristic of self-training and technical investigation is disengenuous.

> And, since signals radiated within
> the HF spectrum cannot help but propagate internationally, such signals
> are regulated internationally!
>

No doubt, but how does this relate to the discussion at hand?

> For now, those who set the regulations have decided, just a week ago
> in Geneva, to leave things in the HF spectrum as they are for the
> next few years. And the reasons they are doing so are cost, (that
> is, they couldn't round up enougy votes to change anything now) the
> present arguments favoring CW testing stand as needed -- in their
> opinions -- and I wanted to present the history on which those
> opinions apparently rest.
>

Once more, this is a crude attempt to deflect the reader from the discussion at hand. We are discussing IARU's interpretation of the ITU definition of the amateur service and their attempt at an IARU conference to selectively interpret that same definition in order to legitimize CW testing. What ITU does or doesn't do is irrelevant in so far as the IARU's report is concerned, and I would be more than pleased if Reid would stay on topic. Thank you.

> None of what I posted was my own thinking, at least that part in
> quotation marks.
>

To be more precise, it would appear that Reid didn't think at all. Here is an example of that lack of thought... The following is a quote from that message...

:The current international definition of the amateur radio
:service (within the extant ITU treaty) contains the
:words "international interoperability", and connotes
:that any amateur within the global community ought to
:be able to communicate with any other. International
:goodwill and international support to emergency situations
:is absolutely a part of both the present, and that which
:is tentatively proposed by the FASC, should the S25
:section of the treaty be changed.

:Let me review the present situation: re CW as a mandatory
:requirement.

:The phrase "international inter-operability" appears in an
:IARU issued a 26-page report entitled "The Morse Code and
:Amateur Radio -- A Summary from the work of the IARU Ad Hoc Committee".

:The CW Ad Hoc Committee produced the document for consideration by
:the IARU at a meeting in Singapore in September of 1994. The sub-
:committee members were Fred Johnson, ZL2AMJ, Director of IARU
:Region 3; David Sumner, K1ZZ, IARU Secretariat; and John Allaway,
:G3FKM, Secretary IARU Region 1.

Since there was no quotes around that passage, Reid has suggested that to that extent, we can assume that these are his thoughts.

On the one hand, he stated that the term "international inter-operability" appearred in the ITU definition of amateur service. (In my last posting in the thread, I have shown that was untrue.) Then Reid stated that he wished to review the situation. Then he says that the term "international inter-operability" is found in that IARU report. Now which is it? Is it in the definition or not? I don't for one minute believe that the IARU would make such an egregious error. I can only conclude that it was Reid who made that statement, not the report.

> If you review the statements at the last Regional ITU meetings,

There is no such animal. Reid must be confusing the ITU and the IARU. The former body is a UN agency headquartered in Geneva serving as a focal point for the management of the radio frequency spectrum, while the latter is an association of national amateur societies.

> see the
> IARU web pages, you will see the new emphasis on international emergency
> communication capability.

Yes, yes, yes, a laudable pursuit. So much so, I believe that I will quote it so that there is no misunderstanding:

"S25.3 3. Administrations are urged to take the steps necessary to allow amateur stations to prepare for and meet communication needs in the event of a natural disaster."

As I mentioned before, a laudable pursuit. However, it is notable that, incontradiction to Reid's notion, this provision makes no mention of a link between for Morse code and natural disaster preparation. I will venture a guess as to why there isn't any mention of this link - because there isn't one, in contradiction to Reid's earlier posting.

> And whether Cummiongs chooses to help or
> not, many nation's amateurs do not have all his amtor, pactor, etc.
> capability to call for assistance, nor to put out health and welfare
> situation information.

Would it be fair to say that Reid agrees with the present IARU's tentative position that the Government of the United States of America should continue to demand success in a Morse code examination prior to being authorized to operate on the amateur allocations below 30 MHz is justified on the premise that there are some foreign amateurs who are limited to Morse code operation?

> So, though he chooses not to get involved,
> the international community still views that CW just might be of
> some help in such an emergency -- read the most recent report,
> released in Nov. '97, by the IARU FASC committee.
>

I just did, and to quote from it:

"The report to the Plenary from the Working Group records:

To summarise, Mr Wardlaw said his report will indicate strong support for the retention of the Morse treaty requirement by the majority but will note the comments of a significant minority that favours the elimination of the mandatory requirement and the adoption of a more flexible approach."

There is no mention whatsoever of the relationship between Morse code testing and emergency communications.

Quite frankly, my participation in emergency communication is none of Reid's, or IARU's, business; he should be ashamed to render such an opinion. But even if IARU believed that Morse code was vital in support of emergency communications, that in no way justifies Morse code testing. The examination of operator qualification must based on sound spectrum management practices, and not on whimsical notion that it "just might be of some help in an emergency".

> How many Pactor, Amtor, etc QSO's have you had that were
> not prearranged, or on a schedule?? Ever call CQ on a digital
> mode other that RTTY??
>

Yep, sure have. Just recently, I had an unscheduled QSO with 4S7BRG who called me after having watched me work four Polish stations in a row. That was a new country for me. For that matter, I would be most pleased if Reid would let me know what flight he is arriving at the Macdonald-Cartier Airport (a.k.a. Ottawa International), whereby I can meet him and whisk him off to my shack and I will demonstrate not only initiating CQs, but answering them in baudot, pactor and clover (amtor QSOs are getting scarcer and scarcer these days.. it has pretty well outlived its usefulness and been overtaken with by better technologies. Oh that we could be similarly practical with respect to oher modes of operation.)

> Cummings challenges the IARU committee for including the word
> "international" with the treaty word "interoperabiltiy". Seems as if
> this is an odd challenge to an international treaty, and by an internationally
> staffed committee of the IARU! Sort of hoping to win by picking at nits.
>

For the love of Mike, Jim, are you illiterate? I really don't think you are that stupid. To restate my point, the phrase "international interoperability" or the word "interoperability" DO NOT EXTIST IN THE CURRENT TREATY (the ITU Radio Regulations), nor in any of the versions that have been proposed by the IARU. This is not picking nits, but pointing out a fundamental error in the foundation of the arguement for the retention of the

Morse code, be it Reid's or IARU's notion. I have no doubt that that IARU reports have discussed the concept of "international operability". However, I suspect that they stated since there are those whose communciations are limited to Morse code communications, then it is necessary that Morse code testing must be continued, otherwise "international interoperability" would be jeopardized. This is a fundamentally flawed conclusion.

This conclusion is flawed because it presumes that most, if not all, foreign amateurs are limited to Morse code only communications. Quite frankly, I don't believe that. I have communicated with too many Third World countries using digital techniques that would belie that assumption. Indeed, most, if not all, of those individuals who reside in what we might call 'disadvantaged' nations are just as well off as we are, even more so.

This conclusion is further flawed because by international regulation, the spectrum management agency of my country must administer a Morse code examination based on the dubious fact that there are foreign amateurs who do not have my capabilities. That is objectionable. That is unjustified. That is bovine scat. If my country is to impose a regulatory burden, it must do so to satisfy its needs, not those of the IARU.

> Not my interpretation, nor ideas, but theirs.
>

Well, if you go rolling in a pig sty, you are not going to smell any sweeter by claiming that you did not contribute to the filth. In other words, since Reid has decided to assume the role of apologist for the IARU, it is no surprise that he would share in the odium.

I had spoken with the designer at Valor/Pro-Am antennas. He said
that new vechicles are coming out with tinted windows that will make
glass mounted antennas impossible. So look for either a move back to
traditional trunk mounts for everything (Celtel, CB, ham) or maybe a
new idea is brewing out here.

Also Valor is reluctant to make a 6/2/440 antenna. Hopefully the market
is going to push that development. Six meters is growing, at least in
Indiana (we are the capital of 6 mtrs).

Perhaps the South American AM operators are actually hams
using the 10m band legally. The non-phone (what you call
CW band) of 10m is not non-phone throughout the world.

Many countries have no subbands within the amateur assigned
frequency ranges and hams in those countries can use any mode
anywhere in the band.

Visual, why would I bother to bluff? I am not boasting, and why should I? Merely responding to someone who is naturally curious about my background as a CB/ham.

If my posts are full of hot air as you allude, shoot a hole in the balloon by posting some great originals.

I do generate some humourous, tongue-in-cheek posts. But those are clearly on-topic, self-evident, and amusing to most of the group! One would hope that they make a few of us laugh! In groups that sometimes bathe in their own high SWR, maybe a little levity is beneficial.

Here's a quip that an old friend always used to sign off with...

"If you don't like the news, go out and make some yourself."

I also have a "how to get started" type of question. One of the things I would really like to try is to build my own gear. I really am starting from scratch, not having any ham experience to date. I think it would be a great activity to share with my kids. I am taking a license exam this weekend. I have an engineering background and know how to build things, but I would like to get some suggestions on what would be a good place to start and where are good sources of either kits or design ideas.

Thanks,
Ed Hummel

Now really, I'm anything but a "little boy", I just like playing the Blues, the local station (1 only w/i 25 miles) plays regular ol' crap and I hate it. I asked around at the local beer pub re:what they'd like in a radio station..."the blues and nothin' but" was thier answer. I gave 'em what they want, it's clean, professionally operated w/ free ads for all comers. But I'm hardly a "little boy".

> you act.

Every day is a victory. I've been 24/7 now for almost two years. They love it, I love doin' it. No screamin', no cussin', just the blues, a few free ads and that's it. A little local news once a day to keep everyone appraised. It's fun and I'm hardly harming anyone with my lil' 20 Watts of clean RF.

WHOA! Read it again. You'll have the same, or almost the same drivel
on free TV or maybe worse drivel you have now. That will be on
Channel 5A and they'll let anyone watch the continuous hack of the
same commercials...over and over and over. However, now the
broadcasters will have PREMIUM CHANNELS to SELL! Wanna bet HBO will
be on some of them? No dish to buy, no need for a new antenna out in
Podunk, 40 miles from town. All those people unable to use DTV
because their house is in shadow from the SW, all those out of range
of cable, will get HBO SOLD to them from Channel 5B! I didn't say the
commercial TV would stop, I just said it would be LESS. The 3 EXTRA
channels will allow us to sell PREMIUM TV to those willing to pay for
it....all on the same transmitter antenna we're using now...how nice!

>
>Subscription TV has lower risk, higher volume, but still a fairly
>low ROI. It is still retailing of programming, but more analogous
>to K Mart or Walmart style retailing than is pay per view. Annual

Right...try to tell that to Hughes Electronics. Those poor boys have
only X million DTV customers sending it in piles.
>
>But free advertiser supported TV is a horse of a different color.

The "free" broadcaster has just gone into the PAY TV business....His
free channel will be FILLED, I'm sure, with advertising trying to get

you to buy the football game on 5C Saturday afternoon...wanna bet?
>
>The business of the free TV broadcaster is selling an audience

>sort of revenue stream.

Those advertisers will LOVE the new pay channels! EVERYONE will have
them, not just the folks in town near the cable! Local advertisers,
left out in the cold when you put up DirecTV, are not back in the ball
game! Pinhead Ford, and his noisy, obnoxious, stupid lot commercial
can NOW get on The Weather Channel...even in the farms 30 miles from
town! He's gonna be grinnin from ear to ear!
>
>There are very few pay TV events which can command $32 an
>hour from viewers, and no subscription TV services which can
>command that sort of revenue. But it is the routine meat and
>potatoes of the "free" broadcaster. He understands this business
>very well, and knows where the large revenue streams live.
>He isn't foolish enough to throw that away to get a lower ROI
>at higher cost and risk by trying to retail programming to viewers.
>He leaves that to the niche providers who fight over the fragmented
>crumbs outside the mass audience.

We've never had a subscription TV service available to EVERY viewer in
the country. Noone will be buying a single EXTRA piece of equipment
any more. Noone will be buying cable TV either, I hope! Those analog
SOBs and their crappy service are going to be in big trouble when the
BIG GUNS who own Channel 5 decide they can distribute HBO better.
Wanna bet HBO will think so, too?
>
>I've been doing this for over 30 years, and I know how it works, and
>where the money is. It isn't in retailing programming to viewers.
>You can be very sure that the programming with the largest popular
>appeal will continue to be "free" programming broadcast to anyone
>who will tune in. The broadcaster will make sure of that, because
>that's where the money is.

Weather Channel isn't retailing to customers. Neither is the
Nashville Channel. These advertiser-supported services will just have
a vastly better outlet Crappy Cable, Inc. can't stop. The
over-the-air boys have just pulled cable's plugs....like cable did to
them by refusing to include airtv channels on some cable systems.

> to call it all bullshit? Do you know if it really happened or not?

The way it was stated, only the surveys that were mailed directly to folks
were counted in the results ... the ones (like mine) that were torn out
of QST and mailed in were said to be "for the BOD's information only" (as
if the BOD gives a shit about what anyone who doesn't agree with their
holinesses
thinks ...)

That is why I think the ARRL survey was bullshit.

> BTW, I let my ARRL membership die a couple months ago.

I have considered letting mine lapse, too, but too many people would tell
me that "If you're not a 'member' you have no right to complain about what
the ARRL does." (as if being a 'member' gave anyone any influence in what
the ARRL does ... NOT)

> I must have been
> mailed at least a dozen offers for free books and name plates before they
> finally realized I wasn't going to renew.

Yea ... all they *really* want is to keep the $$$ coming in ... I found their
recent mailing soliciting money "to protect amateur spectrum" to be a

disgusting
exhibition of self-serving bullshit.

> I just don't see the point in
> paying such a high price for membership in an organization which fights
> for the exact opposite of what I believe in.

That is why I have considered letting my subscription to QST lapse ... the
magazine
really isn't very good (certainly the technical content is virtually
non-existent)
and it pisses me off that they take my money every year but don't represent my
interests ... in fact they are the worst thing to happen to ham radio.

Message-ID: <19971204004801.TAA18130@ladder02.news.aol.com>
Source record: 185215

Someone, I don't remember who, was looking for a way to turn off the clock on the Yaesu FT-530 when the HT is off.

After some research, I finally found an answer. With the unit on, press the F/M key, then press the CLOCK (REV) key, then the LOCK (5) key, and again press the CLOCK (REV) key. To turn the clock on with the HT off, simply perform the procedure again. I hope whoever was looking for the procedure will notice this post.

While I feel absolutely no love for cw, moonbounce probably isn't going
to get much easier even with digital techniques.

I also note that if you really have a great idea for a digital technique,
you can request an STA from the FCC and demonstrate that it works.
If it does work, I'm sure the moonbouncers will quickly make use of it.
If there is one group of hams that use CW only because it's necessary,
it's moonbouncers presently! Get an STA, or suggest an amendment to
part 97 that allows the modes you're suggesting will work. If drafted
properly, I'll certainly support it, and I suspect so would many
moonbouncers. I also note that most moonbouncers are builders,
and want to recruit other people. Easier certainly would make it
easier to recruit. I also note that I am not a moonbouncer, I live in
an urban area where an ERP necessary to work moonbounce would
produce unsafe levels for my neighbors on any useful frequency, but
if ever there was a use for a linear that I approve of, and one that
complies with the fcc mandate for minimum power necessary, it's
moonbounce!

Gary R. Hoffman <gary@carcs3.wustl.edu> wrote:
>Amateur operators apparently used call signs even before licensing.
>When did this practice start and why?

Hi Gary,
It was not only amateurs, but everyone. At that time, there were no radio regulations. The airwaves were a "free-for-all"; no one had any more right to airspace than anyone else. Transmitted signals were very broad, covering a wide range of wavelengths; that coupled with very unselective receivers, meant everyone could just about hear everyone else, no matter what wavelength they hoped they were operating on.

The "tin-can amateur" school boys competed with Navy and commercial shore stations for air space, many times causing those operators to get into on-the-air fights with the hams - the Navy operators would tell the kids to SHUT UP SHUT UP and the school boys would retaliate with a wide range of insults and cussing. Shipping-related traffic would be delayed due to the school boys comparing homework answers or discussing girls on the air. Some of the really bad boys would send phoney departure messages to ships, or phoney arrival messages to shore stations, causing even more confusion. It wasn't just the hams who tried to hog air time; long-winded conversations between ship-board operators discussing sports, girls, or playing a chess game added to the bedlam. Other ships trying to pass important traffic would "lay a brick on their key" trying to get everyone else to stop transmitting long enough so as to get their message to its destination. Gossip between friends at times crowded out messages of life-threatening nature on the high seas. (It's said that the Titanic disaster might have been averted if only a pair of long-winded operators had allowed an iceberg warning to be broadcast from a ship that had sighted what turned out to be the berg the Titanic struck.)

Amateur operators multiplied amazingly, mainly due to wireless circuits appearing in an explosion of radio- and science-related magazines. As hams tried to compete with others in this new-found science, radio towers of grotesque home-made variety began to spring up everywhere...

Uh, what was your question? Oh yes:
Identifiers were of course necessary - many amateurs used the initials of their names, while commercial stations would use a two- or three-letter identifier, usually associated with the city in which they were located (there was more than one station calling itself "NY" on the air). We see the first government-assigned callsign appearing on 31 August 1916: 8XK

assigned to the Westinghouse experimental radiophone station.

I can provide some of the self-assigned callsigns when I get home -
don't have any reference books with me right now.

Shows how little you know ... check out Phil Karn's web page some time,
I wouldn't want to ask you to take my word for it ...

> I also note that if you really have a great idea for a digital technique,
> you can request an STA from the FCC and demonstrate that it works.

Another instance of "You're welcome to develop something for those of
us who beep, but you can't have a license that will let you use it yourself
because you don't car to beep."

> If it does work, I'm sure the moonbouncers will quickly make use of it.

No ... they have been shown better ways, but most refuse to use them,
considering it "unsporting" to use better techniques that would eliminate
much of "the challenge." They insist on doing things the hard way, by
brute force.

> If there is one group of hams that use CW only because it's necessary,
> it's moonbouncers presently!

SSB is NOT undoable via moonbounce ... especially if one station has
a large antenna array.

> Get an STA, or suggest an amendment to
> part 97 that allows the modes you're suggesting will work.

Again with the STA thing ... however, many of us are trying to get
Part 97 amended ... to eliminate the archaic code test, to modernize
technical rules that bar many useful techniques unnecessarily, and to
get a simplified, sane licensing system to replace the current code-based
caste system.

I've listened there for years and I have never heard any CB there unless
your Talking the set of frequencies between 27 and 28MHz but I didn't know
that was classfied as 10 meter freqencies. The greatest danger to ten
meters was the expiermental Liscenses The FCC issued to Texas Instruments
last year to test new Technology between 27.500 an 28.400. What kind of new
technology it was and if it was sucessful we wont know. Lets just hope it
was a flop. A couple of Freebanders causing interference, every once in a
while is the least of our worries with companies like Texas Instruments
testing in our frequencies.

Although I personally respect the boundaries of the 10 meter band, I
think it should be stated that you either use it, or stand the chance
to lose it. Look at the loss of lawful operations in areas of the 80
meter band.....and thats caused by fellow hams.
It's like the battle us SSB'ers have with Am'ers. I hear alot of
fellows that feel the need to scream at AM'ers using 36-40, when it
was obvioius that the frequency was not in use at then time by any
SSB'ers.
The best deterrent is use of the frequencies. Since most of us Cb'ers
don't follow FCC regs.

I obviously don't give a damn what the FCC does, says or makes as
'rules", I, as I said, am absolutely alone in what I am doing in my little town.
The "local" station here is AM and could care less. The beer pub was only the germ
of the idea, not the base of operations, though we're now toying with the idea of
direct broadcast's when certain blues artists are there. The closest FM station is
25 miles away and is 10 MHz higher than my signal. There is nothing to argue
about.

Message-ID: <6694rhiir1@aurwww.aur.alcatel.com>
Source record: 185028

Is there freeware/shareware CW training software
available with a feature whereby the user would generate CW
from the keyboard, mouse key, or joystick button
and the software would dynamically decode the user CW input
and display the resulting text on the screen as well
as calculating and displaying average WPM?

This would be great for verifying
sending accuracy and speed. I've found a number of Morse
trainers on the web, but none with this feature.

This is hardly a feature. Image rejection is something designers have worked hard to improve over the years, ever since Armstrong invented the superheterodyne receiver. Many a person with a cheap receiver has suffered becaue of it's lack of image rejection.

If signals come in at an acceptable level on the image frequency, then that receiver isn't very good at doing what it's suppose to, namely receiving signals on the frequency where the image signal overrides.

And how do you know that you are in fact receiving cellular phone calls? I thought (though I haven't looked up the details) that there were cordless phones in that frequency range. That's the problem with receivers that have bad image rejection; you have to puzzle over whether you are hearing a real signal or an image.

In amateur radio, wide frequency receive coverage seems to have become fairly standard with 2meter equipment. Is it manufacturer's wanting to add another sales feature, or hams who have to be able to receive those "police bands"? But then people who buy those rigs turn around and complain about unwanted signals.

But there is a direct correlation between the "features" and the problems.

Go get an ARRL handbook. The older ones seem to have more design and
construction projucts in them but they are always a treasure-trove of
information.

There are also many other books out there... just visit a local
amateur store if you have one (or get a catalog from Amateur Supply or
Ham Radio Outlet or ???).

I applaud your desire to build, Ed, but I suggest that you buy your first radio. It will be one of the most valuable pieces of test equipment you can own for building your second radio. You really *need* RF test equipment, and the receiver and transmitter in your commerically built radio will serve as service monitor and signal generator for your construction projects.

I'm assuming you're taking the Tech exam, so you'll be looking at building a VHF+ radio. There are lots of little HF CW kits available, but not nearly so much for the VHF+ operator. But don't despair, building VHF FM equipment is really simple today thanks to subsystem ICs. Motorola and others offer nearly complete receivers on a single chip, and complete low power exciters on a chip too. You can follow that with a hybrid module to a respectable power level.

This is almost plug and play since most of these chips are 50 ohm in and out. The key to success is in following good RF layout practice. Otherwise you're likely to have a howling mess of feedback on your hands. Motorola has application notes to guide you in building your own radios, and even offers evaluation kits for some of their chips which include a circuit board, IC, and application note for building a receiver or transmitter. Build in modular fashion so that you can control feedback paths and so you can test each module separately. That'll be rather bulky, but it'll be likely to work first time, and the modules may be useful for more advanced projects later.

Now a FM rig would be the most popular thing to build at VHF+, and useful too. But if you are interested in SSB/CW, then I highly recomend the Rick Campbell R2 and T2 designs. They are simple to build, and they work well. With the appropriate LO, they can be used from 500 kHz to 500 MHz. These were featured in QST, and Kanga sells kits.

Ramsey and TenTec offer 2m FM transceiver kits. I don't think much of the Ramsey kit, but the TenTec is a good no frills design. Realize that neither of these kits will save you any real money over buying a used radio (or even some new radios) which are already factory built. And the commercially built radio will likely be smaller and have more features. But the kit offers the fun and educational aspects of doing it

yourself. (I guarantee you'll get an education with the Ramsey kit. By the time you debug it and redesign it to eliminate its flaws, you'll have gotten a real education.)

Another route to consider is modifying commercial surplus 2-way radios for amateur use. Radios such as the Motorola Micor and Mitrek, or the GE MVP, Exec II, and Mastr II, were extremely well designed and built. You can buy them for a pittance, and convert them to amateur operation fairly easily. You'll then have a radio that will outperform most commercially produced amateur radios, and will have spent less than $100. This can be a good way to get your feet wet without too much danger of getting in over your head.

(I got started on VHF with an old Motorola 5V many many years ago, and still search out and convert surplus radios for all sorts of purposes. They make the ideal foundation for a repeater or a link radio, and make fine mobile and base radios too if you don't demand that they double as DC to daylight scanners. The fact that they *aren't* wide range scanners which happen to transmit is why they are so superior to most ham radios. They have excellent tight filtering, don't suffer from horrible IMD, and run very comfortable power levels. They'll put out signals of which you can be justifiably proud.)

>Scot I live just outside of Atlanta monitor ten meters on one of my other
radios and have litlle if any interference from CB. I don't count the South
Americans, that is beyond even Gods' control. The FCC won't touch the
freebanders unless they are running excessive power and causing
interference to commerical or public service radio systems. As for the
space they occupy let-em have it even CBers' ought to have a little fun on
the radio as long as they don't interfere with 10 meters. Once they start
doing that its time to put a stop to it.

NNN: >No one here is in
NNN: >any doubt that it was not Walt who initiated the grossly offensive
NNN: >remarks about gypsies, Jews and the Nazis.
NNN: >
NNN: Please get your facts straight.
NNN: 1. The remarks about gypsies were initiated by Walt Davidson.

Irrelevant. Neither here nor there. I am not referring to the remarks made by Walt (He made no mention of any Nazi, nor of their atrocities. You Did.); remarks which he has since amplified to include all scroungers, irrespective of racial origin.

NNN: 2. At no time in my reply to Walt did I mention Nazis.

Rubbish!
....."Let's not forget that Hitler didn't just have a "downer" on Jews, he also managed to exterminate Gypsies too.......but it all starts with racist views like yours."

Clearly you didn't mention any Nazis. We all know that Hitler was not one of them! We all know that the Holocaust was not perpetrated by the Nazis. Who do you think was the perpetrator? The Church Of England?

NNN: 3. My remarks were not grossly offensive,

Rubbish!
You stated that racial extermination has its roots in the things that Walt was saying. That was grossly offensive.

NNN: just perfectly accurate.

For someone who blusters about libel, you are on a sticky wicket If you now re-affirm your comments that Walt's comments are the foundation of racial extermination.

NNN: Whilst libel on the internet is difficult to prove,

Absolutely impossible in this case!

NNN: I'm sure
NNN: Demon Internet would be interested to learn that you are posting
NNN: untrue comments about me on newsgroups.

Rubbish!
For someone who blusters about libel, you have just made a libelous

comment about me! As I demonstrate, all the comments I have made about you are TRUE.

NNN: I have a record of
NNN: everything which you, Walt Davidson and I have put on the
NNN: newsgroups in this discussion (as I'm sure Demon have).

More threats, Nick?

NNN:
NNN: An apology from you would be in order. A public apology would
NNN: be preferable,

Rubbish!

NNN: but I doubt if you are man enough.

More abuse, Nick?

Nick

More abuse.
More threats.
More bluster.
What are you trying to prove?
Aaaaaah! I remember! You are trying to prove that you are not abusive!
BWAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAAAA!

PUBLIC APOLOGY

I SINCERELY, PUBLICLY AND UNRESERVEDLY APOLOGISE FOR FAILING SOONER TO RECOGNISE YOU FOR WHAT YOU REALLY ARE.

>the journal of the organization that is *supposed* to be "leading
>the way" in ham radio, I find that negligent in the extreme.

We have heard you say this before Carl. And the valid and reasonable
replies which came back from our ARRL reps here seem to have reflected right
off of you. The more advanced articles are now printed in QEX magazine.
The reasons for this have been explained to my satisfaction.

If you find the number of more advanced articles in that publication is
decreasing, then we can conclude that there isn't as much work of an
advanced nature being done in amateur radio as there used to be. You and
Gary would seem to be in a position to help do something about that. But
I think we can assume the reason you have not, might also apply to
others, and hence we see less published work. This is not the fault of
the ARRL.

>I still believe that the interests that the BOD and the ARRL as a whole
>"represents" are the interests of the BOD and the core of good old boys
>who dominate ARRL politics. Everyone else pays to be screwed by them.

I think there are more "good old boys" as you call them, than not in
amateur radio. Therefore, if the BOD has a "good old boy" attitude, it
is representative of the majority. Yes, this is always problematic for the
minority in a democracy.

>But 99% of the time the do exactly the wrong thing! That is worse than
>NO "representation" ... though I agree we need some representation, we
>are, IMHO, FAR worse off for the ARRL's "representation" than we would
>be without it ...

Are you unable to paint in any shades other than black and white? Let us
be mindful to avoid "my way, or the highway" attitudes on both sides of
the fence, OK Carl?

Hello. I'm interested in hearing your thoughts regarding HF mobiles,
especially the Icom IC-706 vs the Alinco DX-70.

My main concerns are selectivity, filtering, audio quality, ease of use.
A keyer would be nice but not a main objective.
Is the IC-706 MK-II worth the extra $$$ over the DX-70?

Thanks,
Brian

Now that IS an offensive remark to many Christian people.
I suppose it's OK if you do it ?

>You stated that racial extermination has its roots in the things that
>Walt was saying. That was grossly offensive.

Are you saying that racial extermination doesn't start with
racist comments ? How does it start - chain letters ?

>For someone who blusters about libel, you are on a sticky wicket

Oooooh, is that a threat, Gareth ?

> ....If you
>now re-affirm your comments that Walt's comments are the foundation of
>racial extermination.

Any remark which singles out people purely on their race (or
skin colour) IS racist. The original words that Walt said WERE
racist. He has now proved that he hasn't even got the courage
of his original convictions, and now claims he didn't mean to
single out a racial group. If he meant all scroungers, why did
he single out E European gypsies ?

>NNN: I'm sure
>NNN: Demon Internet would be interested to learn that you are posting
>NNN: untrue comments about me on newsgroups.
>
>Rubbish!

You could soon find out otherwise, Gareth. FACT, not threat.
Have you read Demon's terms & conditions ? I have.

>For someone who blusters about libel, you have just made a libelous
>comment about me!

So sue me !

>As I demonstrate, all the comments I have made about
>you are TRUE.

You've demonstrated nothing. All you've done is to twist words
around in an attempt to extricate yourself from the big hole
which you have dug for yourself with your own teeth.

>
>NNN: I have a record of

What a limited vocabulary. How old are you - 14 ?

>
>NNN: but I doubt if you are man enough.
>
>More abuse, Nick?

No, an opinion which I think is borne out.

>
>Nick
>----
>More abuse.

I think you ought to look up the word if you own a dictionary.
I'm not sure you know what it means.

>More threats.

Get a life !

>More bluster.

Where did you pick that word up ? "The Sun" newspaper ?

>What are you trying to prove?

240+ entries in this thread and he still doesn't know !
Well Gareth, it's all about the fact that UK amateur license
numbers are falling, probably because people are sick of hearing
types like you and Walt on AR, so they take up some other
friendlier and more rewarding hobby.
Case proved as far as I'm concerned.

>Aaaaaah! I remember! You are trying to prove that you are not abusive!

Oh, never mind, Gareth. Keep taking the tablets.....

>BWAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAAAA!

Oh yes, a very mature statement. Have you lost your dummy ?
Never mind, mummy will fetch it for you....

>
>PUBLIC APOLOGY

Rob WM8S asked:

> Does anyone have a list of the Z-signals (on-line would be nice!)
> that are (were?) used by the military on CW networks where amateurs
> use Q-signals?

"Z" signals come from ACP-131 which is still in use on US and Allied
military networks such as AUTODIN and DMS.

It's an unclassified pub, so you might find a copy at a large library.

There is a listing on the web at:

http://nersp.nerdc.ufl.edu/~decrawf/misctxt/Zcodes.txt

but that copy is incomplete, and some of the information is
not accurate.

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still
must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.
Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

I've listened also, but it's tough to understand much of anything that is being said with several stations simletaneously trying to jam each other.

The best solution here would be to reallocate these and all other amateur HF frequencies to commercial shortwave use.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Hi, and thanks for reading this message.

You probably see banner ads from services such as LinkExchange everywhere as you explore the Net. Unfortunately, these banner services feature a wide variety of sites, mostly non-ham related. That means that, as a Ham Radio Internet Webmaster, you can't expect a ham to see your banner 99% of the time, or even less.

That is why we have decided to try launching a new Internet service, free to all hams with webpages: a Ham Radio Banner Swap! You would display other hams' banners, and in exchange, they would display yours. If a visitor liked the appearance of the banner, they could just click on it to visit its associated site.

At this point, we are just trying to see how much interest there is in such a project, before undertaking it in earnest. If you find it at all interesting, why don't you visit our website at

http://hambanners.ml.org

and see some actual functioning demo banners, of exactly the same type which would appear on your page. You can also fill out a simple form to let us know who you are and how we can help you, and if we get enough responses, we can probably launch the service in full by January. Please remember, there is NO obligation to participate if you fill out the form, and there are NO charges whatsoever associated with our service.

Questions? Let us hear from you through e-mail. Please address it to

webmaster@hambanners.ml.org

We will do our best to respond promptly, but there are a lot of tests coming up in the next week or two...

73, and good luck with your page!
Mike (KE4QDZ)
Ryan (KF4QMZ)

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

There you have it (once again) folks ... Larry (and presumably many of
his cohorts) would rather see the ham bands given over to commercial
interests than to open the HF bands to non-beeping hams with more modern
interests. (I guess that's teh "Real Ham" way ... NOT)

The part that is VERY humorous, though, is the implication that Larry
and his beeping cohorts are "doing something constructive (and profitable?)"
with the HF bands with their silly games and beeping rituals (and the
implication that anyone else couldn't possibly do anything constructive
without beeping.)

This just goes to show how backward, selfish, and downright ignorant
at least some (if not most) rabid "code test forever/code makes the ham"
folks are.

I have a GAP Titan mounted at 8' (To allow walking under it without
getting "clotheslined" on the counterpoise). It *does* work and one
could easily earn DXCC with it in a few of months. HOWEVER, my dipoles
hung at 35 feet on 40, 20 & 15m work better. I just don't have room for
4 or 5 more dipoles. :-)

>
>That's REAL ARRL "commitment" ...

Welp, if there isn't enough submitted material, or enough man-hours to
produce a monthly publication, I don't see any problem with changing the
publication schedule, as long as subscribers get the number of issues they
paid for.

Didn't I recently see a job posting for a QEX editor at the League? I'm
almost sure I recall seeing one in QST not long ago. That would certainly
explain the lapse in publication, without an editor.

>First, Section Managers have NO power to change anything ... only the
>BOD determines ARRL policy.

Section Managers are the point of first contact most League members
have. League members in turn vote for Division Directors. It would seem
to me that a well-spoken SM could "sway" political opinion of the membership
by articulating his/her personal opinions.

>Second, I wouldn't waste my time ... even if I won a seat, I'd be totally
>outnumbered and wasting my time. The BOD cannot be reached, IMHO. Their
>minds are closed and most of them don't even politely respond to letters
>criticizing or expressing displeasure with the policies that they establish.

Well Carl, that seems to be the crux of your entire amateur radio career.
You can't "waste your time" on much of anything. You can't waste your
time contributing technical articles to QST. You can't waste your time
running for an ARRL office. You can't waste your time taking a code test.
But... You *CAN* waste a lot of time bitching, moaning, and insulting
people you disagree with on USENET, all in the "name" of "saving" amateur
radio.

But, that's okay. You continue to spend your time bitchin on USENET and the rest of us will be warm and cozy in our shacks, enjoying ourselves on the radio.

>Third, even if I *did* think (and I have no such delusions) that a single >progressive person could "make a difference" on the ARRL BOD, I would not >have been eligible in the most recent election due to a brief lapse in my >"subscription to QST."

You need to just belly-up and pay for that life membership. It was only a couple hundred bucks (well, used to be, when I did, at least.) I'm sure you can afford it.

>Besides, not having run for the ARRL BOD doesn't negate one's right to >an opinion either ...

Nope, that it doesn't. However, if you feel as strong as you claim you do about amateur radio issues, it would seem to me that you would want to engage in the political arena to make your views known to as many supporters in your area as possible.

The slow, but steady drift towards anarchy continues.

We are cursed with a President who rejects all standards (legal and moral) that have applied to all previous presidents, and a citizenry who now believe they may freely make their own rules.

I guess it has been a pretty good "run", this great experiment, America. Count the days - we cannot long survive when selfishness prevails. Such was not the nature of the foundational expectations of our founders - our system will not tolerate pervasive lawlessness.

Too bad too, this is the best system ever implemented in the history of humanity. I pray that the completion of the disintegration may be stalled until my children are old enough to cope better. :-(DavidC

Gee, Bill ... lat time any of us checked it was not required to have a ham license to have an opinion nor to have views WRT Federal regulations governing the use of publicly-owned spectrum (such as the ham bands).

Now I realize that the pro-coders would like to assert that only incumbent (and preferably code-tested "Real Hams") should be lawfully entitled to have/express views in the area of ham radio regulations, licensing, etc. that's not the way our government nor our society works ... you see, two things (called The Constitution and The Bill of Rights) keep "getting in the way of" the procode agenda to squash debate or opinion contrary to the current status quo of stagnation and Luddism.

So, whether Amor has or doesn't have a ham license is TOTALLY irrelevant to his right to, or ability to, have or express his views.

Maybe he just doesn't want to advertise his callsign in order to avoid harassment by rabid pro-coders through media other than usenet/e-mail.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

> any more difficult than they were for previous "generations".

No, Hans, they are not "more difficult" per se ... only more
irrelevant. In today's fast-paced world, where many people
work longer hours, have longer commutes, and less discretionary
time than their parents or grandparents had, that makes the
hundreds of hours necessary to gain proficiency in an antiquated
mode that is of no interest and less use to modern folks an
unacceptable "cost of entry."

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

>
> Boy, you anti-CW test guys are a bitter bunch! I had no idea!

The code issue has generated much ill-will for several decades and
it's not going to go away until changes occur. That is unfortunate,
but factual.

> Just wanted to present what was going on, internationally.
>
> All that stuff I quoted has been considered and, apparently
> accepted by those who vote on such things, internationally.

Many of whom are substantially self-appointed "guardians of
the heritage" ... what I mean by this is that many, like the
ARRL BOD and officers, are the "leadership" of a minority
"good old boy" club whose sole purpose is to maintain their
status and the status at all costs ... even to the destruction
of ham radio as a whole.

> Perhaps you had better check out the IARU web site.
>
> As you know, the entire issue is "off the table" for awhile; or to
> put it another way: they couldn't get the votes rounded up to
> change anything yet, so decided not to spend time (money)
> on the issue for a few years.

The point was not necessarily "lack of votes" ... the *issue* never
got to a vote in reality ... the point was that the delegates to the
WRC (who are government officials, NOT the ARRL or IARU weenies) had
more important things to deal with than ham radio ... that we are not
important enough to merit some attention should be a MAJOR "wake-up
call" to all hams ... but too many are stuck so far "back in the glory
days when radios glowed in the dark" that they can't fathom the real
danger of extinction that we face in the coming years.

> Ditto here in the US: ARRL BOD "tabled" the topic, for now.

Sure ... what part of THAT surprises you???? They never wanted the
issue to exist in the first place, but had to *appear* to be "open-minded"
about it in order to court the majority of people who are not joining
in droves (face it, they just want the $$$).

Now that the issue has been tentatively dropped from the WRC agenda
for now, they can claim "It's not OUR fault." and try to sweep it
back under the rug for a while.

If they had any sense (or cajones) they would petition the FCC to drop the code test to 5 wpm for ALL classes of HF license, fix the written tests, restructure to 2 classes of HF license, plus no-code tech with an improved written test, and lobby the FCC, NTIA, and State Department to press for getting the treaty changed in 1999. However, as an uncle once said, "IF is the biggest 2-letter word in the English language."

As far as the survival of ham radio is concerned, the ARRL is "public enemy #1."

Hi.

I am using Pro-2036 and this scanner receives cells (images) right in
the ham radio bands (902-928). [no wonder why it a became
discontinued product]

Just for curiousity, do the scanner users in US are allowed to listen
to cells by monitoring the ham radio freqs ??

should I shut down the rig to be nice ??

I recognize the need for "beginner's articles" and simple projects
for the neophyte ... but QST *used* to carry some pretty involved,
advanced project articles, too ... but not any more. That sort of
thing is "too technical for QST" ... since QST is *supposed* to be
the journal of the organization that is *supposed* to be "leading
the way" in ham radio, I find that negligent in the extreme. The
backward attitudes of the ARRL in virtually all respects should be
repugnant to anyone with a *real* interest in radio.

> I also find the regulatory information section interesting and
> valuable most of the time, and of course, the advertising section lets
> me know what the Big Guys are letting out of their "skunk works."

Keeping an eye on how they are screwing things up is the major
selling point of the regulatory and "BOD minutes" portions for me.

> > ... and it pisses me off that they take my money every
> >year but don't represent my interests ...
>
> But they may represent the interests of others, which are no less
> valuable or important to those folks to whom those interests belong --
> no less so than our own interests are important to the rest of us.

I still believe that the interests that the BOD and the ARRL as a whole
"represents" are the interests of the BOD and the core of good old boys
who dominate ARRL politics. Everyone else pays to be screwed by them.

> It seems to me that the ARRL is providing at least an active
> organized presence, whereas, without that presence (in D.C., in the
> states, regions and wherever), no other well-organized presence
> apparently currently exists to offer even a fledgling representation

But 99% of the time the do exactly the wrong thing! That is worse than NO "representation" ... though I agree we need some representation, we are, IMHO, FAR worse off for the ARRL's "representation" than we would be without it ...

I'm going to be getting some money from various relatives for Christmas. We're talking about a fair amount here, about $300. I want to buy (don't laugh - I can buy used, too) a dual-band UHF/VHF 5 W HT. I want to use it in the car, as well as at home with an antenna on my balcony. What HT models have performed the best for you, and have had minimal maintenance needs? What moderately priced vertical 2/1.25 M antennas have performed the best for you? Mobile? I just bought the Dec. issue of VHF, and there are a lot of ads I want to check out, as well as start seriously lurking in rec.radio.swap for good deals, but I also want to have an idea of what to look for.

Thanks.

Pete.

Ah, I see. The FCC is going to assign one microbroadcaster for each local
beer pub. How meaningful ! Shouldn't take more than about 2 microwatts to
cover it, though. Ought to be able to squeeze in quite a few on the same
frequency if you space them about a block apart.

Ed

Subj: A SWL's opinion of the Great Liberty Net!

Groups like the Great Liberty Net are usually a bunch of society's misfits, each with personal problems that he cannot or will not work out for himself.
Instead, lazy-minded individuals such as this type band together to find a target, a scapegoat upon which can be blamed for "all of society's ills." They never develop beyond that and are mildly tolerated until they pull something really antisocial. When they are persued for this they cry persecution and declare their legitimate government as fraudulent. Their beliefs are dual, conflicting, as they will be the ones waving the flag the highest at parades honoring the "illegal" government which which affords them this basic right of free speech, not seeing that the US was also built in part by the people whom they aim their hatred on, then retire to their rooms and hop on the radio to whine in their spineless manner, reading passages from other malcontents and mentally ill folk who have a talent for writing, confirming their paranoia.

> from the National Alliance. (WB4AIO)

Funny, in his original lying message claiming that I had resigned, Covington cited an unnamed "source" which he said he believed to be "entirely credible." If his source had really been _Free Speech_, surely he would have said so at the time.

Furthermore, anyone who reads _Free Speech_ could have discerned in a few moments that no such announcement has ever been made in its pages.

Covington, you have such contempt for the pigeons on your sucker-list that you assume they won't even check this. Sadly, you may be right about most of them.

>A number of Pierceys, including Strom
> himself, leaped forward and called me just all KINDS of horrible names,
> denouncing the very IDEA that mighty Strom would resign from the NA,

I have not resigned; and Harold Covington is a contemptible liar.

Covington, those who cannot now see the obvious fact that you are shamelessly lying deserve whatever fate you are planning for them.

> receiving the Boodle? Inquiring minds want to know!

Never mind that I did not resign from the National Alliance.

I issued a statement on the Internet on March 19th stating that I had not resigned

I am attaching the copy you requested of Kevin Strom's resignation letter from the National Alliance. I spoke with Kevin last night and he tells me that there are still one or two people up in Hillsboro who will talk to him if Pierce is in his trailer or his office and they know he's not listening, and they tell him that the NA is pretty much falling apart. Donations and book orders are plummeting through the floor and they will not be able to make basic expenses for more than a month or so. National Vanguard publication has been suspended until further notice.

It is with the deepest regret and a profound personal sadness and sense of loss that I must terminate my formal association with the National Alliance, an association of almost fifteen years. I have evaluated my position very carefully in the light of what has been going on in the Alliance over the past five years or so, and I am sorry to say that I can see no other honorable course of action.

I can no longer edit or be associated with a publication entitled "Free Speech" when the organization under whose auspices that periodical is issued engages in lawsuits against other writers and commentators in order to suppress and deny their right to the very free speech which the Alliance demands for ourselves. Furthermore, I will no longer be publicly affiliated in any way, shape, or form with Will W. Williams, and I will not allow that public affiliation by virtue of being in the same organization to continue for one minute longer.

Bill, please believe that I will always remain your personal friend and Susan's as well. For your many courtesies, your hospitality, your friendship and scintillating conversation, and the many years of inspired vision and leadership you have given us all before this shadow fell across us all and destroyed the trust and pleasure we all took in the struggle, I thank you most sincerely.

You gladly have my permission to reprint and re-issue any written or recorded material which I have done for the National Alliance in the past, and I hope that it may prove of benefit. If ever you decide to resume the role of firm and commited leadership which, for whatever reason, you decided to abandon five years ago, I hope that I will be the first one of the many who have left whom you will call upon and say, "It's over, he's gone, come home." I await that welcome call from you,

Your friend and fellow in struggle,
Kevin Alfred Strom (WB4AIO)

Easy there, Mr. Virginia Tech. Anyone who spends big buck$ on an HF
rig can surely afford a few more dollars for the ARRL's Operating
Manual (or equivalent, if there is an equivalent). Burdening others
to provide answers which one could easily find himself is a bit selfish,
don't you agree? (Reminds me of some of my students who won't purchase
the textbook, but pester others in the class with questions about its
contents.)

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,

a small portion of each amateur band should be opened up for the no-code technician to experiment on the HF bands. I believe this to be satisfactory since the only real valid arguement for keeping code other than as a method to limit the number of licences, is for the grave emergency senario where a disaster has occurred and someone is touching two sparking wires together to tap out morse code or something as equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a requirement. However, I think it is a wonderful practice, and for those who enjoy it as amateurs, I think they should have areas in the HF spectrum where they can use morse code unhindered and uninterupted. However these same gentlemen should also recognize that there are other people with other desires and should be tolerant of new ideas and usage of the amateur spectrum by amateurs.

4492. ACS Newsletter for week of 8 December 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-05 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6684qj$m7i@news.Hawaii.Edu>
Source record: 185108

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the
State of California Governor's Office of Emergency Services.

The purpose of this weekly newsletter is to bring those of us in emergency
communications closer together by sharing common ideas, and by introducing
new technology into the emergency services community. All individuals with
an interest in emergency communications, disaster preparedness or helping
the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many
different organizations with the same common goal: emergency response. We
encourage everyone, from whatever organization you represent (or just
yourself!) to bring us your ideas, suggestions, concerns, manuals,
handbooks, or opinions so that we may share them with the group. To those
of you who have just joined us, welcome aboard!
Mark Renaud Millville, MA
Frank Ealand WA6IBE Fresno, CA
Radio Program Manager U.S. Forest Service Pacific Southwest Region
Rob Johns Amateur Radio Coordinator City of Victoria Victoria, B.C.
Don Kulha KE6QHP Santa Rosa, CA Russian River area ACS
Eugene Underwood W7AKA ARES DEC for King County, WA
Greg Courter KE6NYM Porterville, CA
...
We are pleased to announce that the ACS Newsletter has found
a majordomo account, thanks to the efforts of Mark Hartman from
California ACS Southern Region. You can now subscribe/unsubscribe
automatically, and the mailing list will become much more streamlined.
New subscription information is posted at the end of the Newsletter;
and the updated FAQ should have reached your mailbox by now.
Thanks, Mark!

...
>From the mailbag:

Dave:
Thanks for the news letter. I am sure all of us in Emergency
Management find the information invaluable.

In reference to the FEMA/USFA/NFA-ERT:SS" Emergency Response to
Terrorism Self Study course it's available for download at

Current Events:

The Massachusetts RACES, ARES, and SKYWARN groups are announcing a
Simulated Emergency Test for Massachusetts Amateur Radio Operators, on
Saturday, December 6, 1997 from 10am to Noon.

Simulated Hurricane Zena, will be the scenario, and all Massachusetts
Amateur radio operators are invited to participate.

All Amateur radio operators are asked to find the operation of their local
SKYWARN net, and report their basic weather. Specifically, Callsign, Town,
Temperature and Cloud Cover. This information will be passed to the Amateur
radio station at the National weather service. RACES nets will be activated
simultaneously, and in some cases need to share channels with other groups.
Administrative traffic will pass over RACES channels. Local ARES groups are
encouraged to participate in any way they can, reporting their
participation during the exercise to their SEC.

Any and all modes of operation are encouraged for the duration of the
exercise (APRS, SSTV, ATV, Packet etc). Reports of operation are
encouraged.

For more information, contact:

If you're wondering what's happening at Metro's Natural Hazards
Program in Portland, we've got a basic "brochure-ware" web page at the
URL:
www.metro-region.org/drc/nathaz/nathaz.html
In the not-too-distant future we're planning to add dynamic mapping
capability at this site, so folks in the Metro area (at least) can build
hazard maps over the Internet. Sometime in 1998, we're hoping to move
Metro Area Disaster GIS software from its current confines on CD ROM
to the wide open cyberspaces.
Yeehaw!
And stay tuned.

EMCOMM Bulletin:
EMC108 Who's in Charge? 4/4 For release 12/1/97

Continuation:
I said "remaining" because government service is not everyone's cup of tea. This is why we deal with individuals and never clubs, associations, or other groups. There is no room among the unpaid professionals for loners, egos, and non-conformists. Some feel it's not "P.C." to discuss such issues, but failing to do so is a sure formula for failure. It is essential to weed out those who don't have the mind set to fit in very early and, preferably, before any individual is signed up and sworn in. Club or other affiliation influences must be left home in order to function properly. Acceptance comes before one can be a success part of a team effort.

Preparedness among volunteers often includes activities well outside the realm of being a radio operator. However, many Amateurs
still think that their sole purpose is to send and receive radio messages. At one time in government that was the one and only mission. As Public Safety and other communications systems improved in quantum leaps in urban environments, the need for such radio emergency communications shrunk. Now, where you have volunteers with skills other than just operating a radio, you have a far more viable support resource. Some Amateurs disagree with this concept because they don't want to do anything other than send and receive messages. That's their choice, but they will not be invited to participate as an unpaid professional in Public Safety. Any volunteer must put the needs and desires of the served organization above their personal or outside organization agendas.

This discussion is addressed to both volunteers and government paid staff they serve. There is a very good reason for this. Both are partners and not separate and distinct. At one time (and perhaps still) there was a tendency for one government to tell or suggest how other governments deal with volunteers. The volunteers were (or are) not included because they are improperly considered to be an outside, separate, doomsday resource. If you do this, you have added a very big factor to the Formula for

Failure. Local governments must provide their volunteers a
continuing curriculum of People, Procedures and
Preparedness. That is the very heart of the "Auxiliary
Communications Service: Lessons Learned" workshops for
states, counties and cities. (end of series)

I wonder where you heard this information? Its totally bogus. The ARRL had very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country's licensing authority. Given the nature of your bizarre incentive system I'd say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we've got the America's Cup too. Damn we're good.

DIVISIONAL NEWS

THE DURAL TRASH & TREASURE

There was a good turn up to the Trash and Treasure last Sunday here at Dural -- The weather was kind with a mild day. There were 13 car boot sales plus the Division's magazines with Aub VK2AXT and the surplus lines from the container. We were not sure of the final head count but there wore more cars than would fit Into the grounds. We would like to thank you all for coming along.

The WIA provided a free sausage sandwich from the BBQ to all in attendance. The bus from Parramatta attracted a few passengers. The next Trash and Treasure will be held at Parramatta on Sunday 1st February, 1998

ATTENTION BROADCAST TEAM

The broadcast roster for the period January to March 1998 will be drawn up soon, so please notify the Divisional office of any dates that you are likely to be unavailable.

WIA FEDERAL OFFICE CLOSING FOR HOLIDAYS

THE WIA FEDERAL OFFICE & EXAM SERVICE WILL BE CLOSED FROM 19 DECEMBER 1997 TO 18 JANUARY 1998 INCLUSIVE.

EXAMS FOR MARKING MUST BE RECEIVED IN THE OFFICE BY MONDAY 8TH DECEMBER TO ENSURE THE RESULTS WILL BE POSTED TO CANDIDATES BEFORE CHRISTMAS.

ANY ORDERS FOR EXAMS MUST ALSO BE RECEIVED BY MONDAY 8TH DECEMBER.

ANY MATERIAL OR ORDERS RECEIVED AFTER THAT DATE WILL NOT
BE DEALT WITH UNTIL AFTER 19 JANUARY 1998.

Thank you for your co-operation.
Regards, June Fox

WICEN NEWS

As predicted last week, WICEN was indeed involved in the bushfire emergency. At the time of writing (Thursday evening), WICEN (along with other VRA squads) was activated to assist the Police with their Disaster Victim Registration (DVR) procedures, in both the registration and public enquiry aspects. Tasks included computer entry of information, the taking of calls from the public regarding victims, training of Police officers for these tasks, supervision of the DVR Coordination Centre, and liaison between the VRA operators and the Police Service; it will be recalled that WICEN was last involved in these aspects at the Thredbo disaster. All told, there were fifteen WICEN people involved, including eight from the Central Coast region, with at any one time around fifteen VRA people altogether.

Events this month include the Management Committee meeting, to be held in conjunction with a BBQ next Saturday, and whatever activations arise from assorted "earth, air, fire, and water" disasters; there is thought to be no connection between these events ...

A reminder for events next year include the Bushwalkers Rogain, run by Alan VK2YYJ, on the weekend of 27-28th June at a location to be advised just two weeks previous, and the Hawkesbury Classic Paddle, on the weekend of 31st October and 1st November.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

DX REPORT

TUNISIA - Albert, F2KN, will guest operate 3V8BB from December 9 to 15. He is here on business, but will try to operate as time allows.

SINGAPORE - Sam, 9V1ZB, will be active weekends on 160 meters.

ISLE OF MAN - Steve, GD4UOL, will be active in this weekend's ARRL 160 Meter Contest and will otherwise be active until December 6.

GUERNSEY - Jay, K4LZE, will be active as MU0BKA until December 9. He will be using mostly CW on 160 to 10 meters. He may try some SSB.

ST. PIERRE AND MIQUELON - Rick, N1RL, with W8MV and WZ8A plan to be active as FP/W8MV during the ARRL 160 meter contest December 5 to 7. They will also operate FP/homecalls as conditions permit.

THAILAND - Ralf will be active as HS0/DL2FDK on 40 to 10 meters using SSB and RTTY until January 19, 1998.

ARUBA- Martin, VE3MR, will be active using SSB as P40MR until late April 1998.

ST. MAARTEN - Isao, PJ7/KG8XV, will be active on 160 to 10 meters from December 10 to 17.

BOSNIA AND HERZEGOVINA - Cedric, F1PSR, is active as T98PSR until March 1998. Activity is on 160 to 2 meters, with some satellite and packet activity as well.

CENTRAL AFRICA - Pascal, TL8PL, is active until the end of December.

SOUTHERN COOK ISLANDS - Guenther, ZK1DI, is active from Rarotonga using CW on 80, 40 and 30 meters.

QSL MANAGER CORRECTION - The correct QSL route for the Icelandic IARU society club call TF3IRA is via the callbook address. N4GN is not the QSL Manager for this station.

--ARRL DX Bulletin 51, dated 4th December, 1997

SPACE NEWS

MIR TO BEGIN CROSSBAND EXPERIMENT

Ham radio aboard the Russian Mir space station will go crossband on an experimental basis starting December 1. The crossband test is part of an ongoing "two-phase frequency experiment" aimed at improving Amateur Radio operations aboard Mir and at better understanding which frequencies or combinations of frequencies will work for the International Space Station. Phase 1, a 70 cm-2 meter "crosslink" experiment, will run until March 1, 1998. The uplink frequency will be 437.850 MHz, and the downlink frequency will be 145.800 MHz.

Phase 2 of this experiment, starting March 1, 1998, will use a 2 meter-only set of uplink and downlink frequencies. It will continue until June 1,

1998.

This experiment was developed by the international partners in Manned Space discussions at the recent Toronto AMSAT-NA Space Symposium. It was endorsed by SAFEX; SAREX; AMSAT-UK; the IARU Region 2 President; the IARU Satellite Advisor, ZS5AKV; ARI (Italy); and RAC (Canada). While not present at the Toronto meeting, the US MIREX team also was consulted and has agreed with the spirit of this experiment.

US astronaut Dave Wolf, KC5VPF, has been reported too busy to get on the air from Mir in recent weeks. MIREX officials have been told that the feedline for the Mir packet station was damaged during the November 6 space walk. Current problems with the attitude control computer aboard Mir might delay the next space walk that could repair the antenna until January. Until the Mir computer problems are resolved, it's expected that the SAFEX II repeater may be shut down for a while.

--AMSAT News Service; MIREX, via the ARRL Newsletter vol 16, no 47

Friendship Amateur Radio Society International

Today we are all used to hearing initials and acronyms used for so many things -- we have our DX, MOSFETs , PCs and SATCOMS. These are but a few related to our own hobby; but have you heard of F.A.R.S.I.? No? Well, it is another amateur radio club, BUT a club with a difference! Formed between a group of amateurs in Canada, U.S.A. & Russia, the initials stand for Friendship Amateur Radio Society International. As you will guess, it is intended to foster friendship, interest & co-operation
in Amateur Radio on an international basis.

Ah! you say. Anyone who works DX does that anyway. Yes, you are right. But FARSI has seen fit to foster this co-operation and interest by picking two aspects of our hobby, namely Foxhunting (now called AR DFing) & CW.

To this end a Friendship Radiosports Games event is organized each alternate year, the next event being scheduled for Oregon, U.S.A., in 1999. This will mark the 10th year since the founding of these Radiosports Games. Comments from those who attended this year's event in Japan were couched In terms such as "We had S9 plus 100 dB of fun!"

In this country there are some very competent Foxhunters and CW operators and there is a group of people who would like to form and Australian FARSI Affiliate. One of the chief protagonists of this idea is Ron Graham VK4BRG in Sarina, Central Queensland. Ron is adept at DFing and interested in fostering a VK team for possible competition in 1999. He would certainly like to hear from anyone who may feel an interest in contesting in either or both of these skills, with an opportunity to see other countries thrown in.

This note is of necessity brief, but if you sense any interest at all in ARDF & CW contesting, please contact Ron VK4BRG who is QTHR at

P.O. Box 323, Sarina, 4737, or Ian Godsil VK3DID QTHR at 25 Monaco Street, Mentone, 3194. We look forward to hearing from you.

-- 73 from Ian VK3DID

CLUB NEWS

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

The Xmas Party for the Liverpool & District Amateur Radio Club will be held at the Scout Camp on Cambridge Road Glenfield on Wednesday the 10th of December from 8.00 P.M.

The format will be a Barbeque using the Scouts large indoor BBQ, so we wont have to worry about fire restrictions.
Everything is BRING YOUR OWN.

Bring the XYL and the harmonics, old members are very welcome as are prospective members.

Directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road (the road through Holsworthy Army Camp). A "LADARC" sign will be placed near the road side in front of the entrance gate to the Scout Camp. The Liverpool and District Amateur Radio Club wish all amateurs and their families all the best for the festive season.

--Submitted by Garry VK2TSR for the Liverpool and District Amateur Radio Club

GLADESVILLE NEWS.

A reminder that the December monthly meeting will he held tomorrow Monday the 9 th at the usual venue. Number One, Birdwood Avenue Lane Cove. On this occasion a meal will be combined with the meeting. For those who wish to partake you are asked to advise via the Club telephone so that the numbers can be determined. DO it today. You should all know the Club telephone by now but in case you have forgotten its 9427 0530

A newsletter was posted during the week with details about the meeting. In last Sunday's evening Test Transmission from VK2TVG one of the items was the History of Australian Television. Some viewers missed portions apparently as one of the relay points kept timing out. There will be another segment tonight on television topics. Channels in use from VK2TVG are the omidirection transmission from VK2RTY on Channel 35 and VK2TVG on 444.25 Megahertz with the main signal beamed south west from Lane Cove for those with reception difficulties on Channel 35.

We understand that there is no retransmission currently available via the Central Coast facility VK2RTG on 70 cm.

73 - Keith YK2ZZO - President / TV Co-ordinator.

THE AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION.

The Association will hold their Christmas Party, in conjunction with the WIA Christmas Party ($12-00 per head), on Saturday the 13th. December 1997, at Jo's QTH, 59 Westbrook Avenue, Wahroonga.

This is a good opportunity to meet some of the councillors of the VK2 Division, and many other Amateur Operators, and match a face to that voice.

So come along and meet some of the people you converse with.
If you would like to know more about the Association feel free to contact the Secretary by phone on 02 9489 4393 once more 02 9489 4393 or write to the :-

Australian Amateur Packet Radio Association.
59 Westbrook Avenue.
Wahroonga NSW 2076.
--John. W. Turner Publicity Officer

THE COFFS HARBOUR AND DISTRICT AMATEUR RADIO CLUB

....will hold its Annual Field Day at the club rooms , Hogbin Drive (Toormina end of the Link Road , next to the Thunderdome) Coffs Harbour , on Sunday 11th January . Bring and buy tables are available for your valuable second hand equipment , BBQ , cold drinks , tea and coffee making also available. Displays , demo`s and all sorts of goodies available to the amateur Radio enthusiast . Hope to see you there .

Robert Hancock VK2MAN @ VK2PYU, Secretary C.H.A.D.A.R.C.

FISHER'S GHOST RADIO CLUB CHRISTMAS PARTY AND JUNK SALE AUCTION

Fishers Ghost ARC would like to invite all Hams, SWL's and their families and friends to their Christmas BBQ on Saturday 13 December 1997 at Campbelltown High School.

The BBQ at 12:00 is free with Sausages, Salads and Drinks provided. The club will also be auctioning off some surplus equipment. All members, including any who wish to join on the day, may also bring their own items for auction.

Ample parking is available at the club rooms at Campbelltown High School. For those who have never been, look for the HF YAGI at the southern end of the school. In case of wet weather, the event will be inside, under the Yagi.

The only costs for the day will be membership if you wish to join the club, and anything you wish to buy at the auction!!! That is our way of saying merry Christmas to you all...

Best Wishes, Darryl Smith, VK2TDS, President of Fisher's Ghost ARC.

Still with Fisher's Ghost...

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening tom 7,.00 pm at the Campbelltown High School, Chamberlain St. Campbelltown

Also every Third Tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the General Meeting night with lectures on popular subjects. Visitors are always welcome.

Next Wednesday will be exam night for a few of the students. The Club wishes the candidates all the best, and is sure the hard work will pay off.

Wednesday the 10th of December will be the last class for the year, classes wiII resume on the 4th February 1998

The Christmas BBO and Auction is to be held on Saturday the 13th at the Campbelltown High School starting midday. Visitors are welcome to come along and meet the members and perhaps pick up a few bargains. Due to the Christmas function being held on Saturday there will be no general meeting on Tuesday 16 December.

December 13: Christmas BBQ & Auction

--Submitted by, Publicity Officer, Chris VK2ZCJ

HORNSBY & DISTRICT ARC. INC.

The Open Night to be held on the 27th. January 1998 the fourth Tuesday of January 1998, this is a coming event not to be missed, so mark this date in your diary, The Open Night will be in the Mount Colah Community Centre, Pierre Close, Mount Colah. (near the eastern entrance to the railway station.) at 7:00 pm.

If you require more information on the Open Night ring John VK2WRT on 98072490 once more 9807 2490.

The Club Monday Night Net will carry on over the Christmas break, every Monday night under the Club call sign VK2MA. through the Club repeaters VK2RNS. and VK2RAT. The frequencies are, 147.250 with a positive oftet and 439.975 with a negative offset Listeners tune your receivers to 147.250, or 439.975. Your welcome to join the net or come along to one of our meetings, in 1998 you will be made most welcome. If you would like to know more about the Club, or its activities write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 2490. once more 9807 2490.

Do not forget Tuesday the 27-1-1998 for the Hornsby and District Amateur Radio Club's Open Night

--John. W. Turner VK2WRT Publicity Officer.

ILLAWARRA AMATEUR RADIO SOCIETY

THE FINAL MEETING OF THE YEAR , FOR THE ILLAWARRA AMATEUR RADIO SOCIETY . WILL BE HELD DECEMBER 9TH . SO BRING ALONG YOUR PARTNER AND ENJOY THE GOOD COMPANY AND GOOD

HOSPITLITY .

THE MEETING , AS USUAL , WILL COMMENCE AT 7:30 PM , IN THE S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG .
VISITORS ALWAYS WELCOME .

AS THIS IS LADIES NIGHT , WE DON'T WANT YOU TO BRING A PLATE , BUT WE DO WANT YOU TO HELP POLISH OFF THE EXTRA SPECIAL SUPPER , WHICH WILL BE PROVIDED BY VICTOR'S GOURMET CATERERS .

THE I.A.R.S COMMITTEE WISH ALL LISTENERS A VERY SAFE AND HAPPY CHRISTMAS AND HOPE THAT 1998 WILL BE A GOOD YEAR TO EVERYBODY .

IF YOU WOULD LIKE MORE INFORMATION RE THIS MEETING OR ON BECOMMING A MEMBER OF THE I.A.R.S CONTACT BRIAN FARRAR ON (02) 4267 2296 MOST DAYS AFTER 4:30PM

HOPE TO SEE MANY MEMBERS AND THEIR PARTNERS AT THE LAST MEETING FOR 1997

CHEERS FROM BRIAN VK2UBF PUBLICITY OFFICER I.A.R.S

HUNTER BRANCH RADIO GROUP

The Hunter Branch Radio Group Ladies Night Xmas Dinner will be held on Thursday, 11th December, 1997, at the Silver Dolphin Restaurant, Cardiff Workers Club at Cardiff.

Starting time - 7 p.m. local.

For Bookings, please contact Pauline, VK2GTB by phone on 02 49 56 91 36.

The Hunter Branch Radio Group Monday night broadcast will end for the year on Monday, 15th December, 1997.

The first broadcast in 1998 will be Monday, 2nd February.

Best Regards....RODNEY C. PROUT, VK2CN. Secretar

COMING EVENTS (7 Dec 97)

Divisional Amateur exams at Parramatta.....This afternoon
Hunter WICEN Christmas BBQ.....Today
Gladesville ARC monthly meeting.....Monday
WIA Exam Service closes for the holidays.....Monday
Illawarra ARS meeting.....Tuesday
Hunter Branch Radio Group Ladies Night Xmas Dinner.....Thursday
WIA VK2 Division Christmas Party & AAPRA Xmas party.....Saturday
Fishers Ghost ARC Christmas party & junk sale auction.....Saturday
Last Hunter Branch Radio Group broadcast for 1997.....15th
WIA Federal Office closes for the holidays.....19th

Last VK2WI broadcast for 1997 (BBQ at Dural after the morning broadcast).....21st

1998
JANUARY
"Global Hilton" round the world balloon flight station active...TBA
First VK2WI broadcast for 1998 (morning only - no evening b/c)..4th
Liverpool & District ARC Christmas party.....10th
Coffs Harbour & District ARC Field Day.....11th
Japan International DX contest (LF CW).....10th-12th
VK2WI morning and evening broadcasts resume.....11th
WIA Federal Office and WIA Exam Service re-open.....18th
Fishers Ghost ARC meeting.....20th
Manly-Warringah Radio Society lecture night.....21st
Hornsby & District ARC Open Night.....27th

FEBRUARY
Divisional Trash & Treasure Sale (held over from January).....1st

Yes, but what if everyone in your city got on the air with their own
lil' 20 Watts of clean RF? Pretty obvious that no one could hear
anything. Thats why they came up with rules. I haven't checked recently
but when I was younger, it wasn't out of reach for someone to get on the
air with a 250 Watt legal station. Think about it.

Best regards,

Art Borg

The average ham isn't an engineer. Thus, the average article in QST has
to appeal to the average ham. That means articles of little to moderate
technical content.

The ARRL has a "technical" magazine for experimenters, QEX. I've never
seen it, but it would seem to me that you're looking in the wrong place
for what you want and then blaming the League for it (akin to blaming
the supermarket for not having chocolate syrup in the same place as
milk.)

I doubt you will be able to add much frequency coverage to the '42.
And as for adding 66-88 Mhz(midband)-don't bother....you have to disable
30-54 coverage to get the 66-88-you can't get both at the same time.
Even if you did not mind using 30-54 coverage, the tuned circuts are not
tuned properly for 66-88-in fact not only is the tuning different, but
several parts have different values on a unit designed to operate at
66-88.
Also, in the USA, those freqs are mostly used for TV audio, wireless
mikes, and audio enhancement devices.
Almost all of the above use WFM.
Since the PRO-42 can not receive WFM, you would get a rather distorted
result.

Well my $0.02. I agree. I think that for one the FCC should be either reorganized or aboished to some extent. The I idea of goverment charging rediculous fees to give you the right of broadcasting is unconstitutional. Now I could see them regualting so you don't overpower the airwaves with overmodualtion, and carving out a channel in the airwaves for you to DX on, but the fees should be like $25 flat. That's it. But some of these fees or overwhelming.

Also I think that the conglomerates should have to give up the stranglehold on AM/FM/TV stations. In the DC/Baltimore metro area (where I used to live) 4 or 5 companies owned 95% of all the stations. Therefore making them "cookie cutter" stations of the same blandness. If it went back to it essentials, independently owend w/ REAL DJ's (not randomly computer generated tracks). I worked for 98.1 WJJR in Rutland, VT. I wanted to do a slow jam show to compete in the late nite market. They said no because the only "live show" was the morning show. Everything else was controlled by the computer. How lame. Their should be a law against it.

Oh well, I didn't mean to blabber on and on, but I just feel very strong about the subject. This is why I want to put up a Urban Contemporary station in my area (Champlain Valley of NY/VT) since there is no such format in the area. Maybee put a little spice into the blandness. But I don't want to pay hundreds and thousands of dollars getting a liscense.

Just what do you think gives you that right? Another one of the current
generation that thinks everthing is "their right". Sorry, it dosen't
work that way, most things are not you right, but a privilege that must
be earned.

<01bd016b$5e5b1d80$LocalHost@ian1>...
> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land, Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting about are ACTUALLY the "non-SSB bands" and are shared amongst Morse and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of having passed a 13 wpm test, but to be barred from all HF operation in every other mode for lack of a Morse test is absurd, unjustifiable, and IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a "femto-word
per fortnight" Morse test with testees allowed to have laminated placards with A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap about ham radio to even discuss it at the WRC ... the certainly don't care if we know Morse or not, since THEY don't use it or need Morse operators any more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely within the portion of hams who find it enjoyable. Period, end of story. (Note again that I have NO problem with anyone who enjoys Morse beeping their brains out 24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to their insisting that everyone else practice their brand of "religion.")

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

> milk.)

First, QEX is not *really* all THAT advanced ... but it is better
than QST ... however, the ARRL showed its "commitment to advancing
ham technical knowledge" recently by neglecting to even publish QEX
for over 6 months ... without even a word of warning or explanation
to subscribers ... then they "resumed publication" and after 2 issues,
announced that they were changing it from monthly to every 2 months.

That's REAL ARRL "commitment" ...

> >But 99% of the time the do exactly the wrong thing! That is worse than

> >be without it ...
>
> Funny, but I haven't seen your name on a Section Manager / Division
> Director ballot recently.

First, Section Managers have NO power to change anything ... only the
BOD determines ARRL policy.

Second, I wouldn't waste my time ... even if I won a seat, I'd be totally
outnumbered and wasting my time. The BOD cannot be reached, IMHO. Their
minds are closed and most of them don't even politely respond to letters
criticizing or expressing displeasure with the policies that they establish.

Third, even if I *did* think (and I have no such delusions) that a single
progressive person could "make a difference" on the ARRL BOD, I would not
have been eligible in the most recent election due to a brief lapse in my
"subscription to QST."

Besides, not having run for the ARRL BOD doesn't negate one's right to
an opinion either ...

> The reasons for this have been explained to my satisfaction.

Hell, Jim, they didn't even BOTHER TO PUBLISH QEX for over 6 months.
Now that they've "resumed publishing" they announced after a couple
of issues that they're going to every 2 months instead of monthly.

> If you find the number of more advanced articles in that publication is

That *I* choose not to support the ARRL is precisely because they have done
so much to harm amateur radio over the past several decades ... Gary will
have to speak for himself. I just object to all of their self-congratulatory
"we're so wonderful" horseshit when they are, IMHO, the single most destructive
force in ham radio. I also object to their continual assertion that the ARRL
"serves the over 600,000 Amateur Radio operators, enthusiasts, experimenters
and hobbyists in the United States, its territories and possessions." Their
membership (even counting dissenters like me who only subscribe to QST to
"keep an eye on them") is a DISTINCT minority of those whom they CLAIM to
"represent."

>

I say again: I object to their continual assertion that the ARRL
"serves the over 600,000 Amateur Radio operators, enthusiasts, experimenters
and hobbyists in the United States, its territories and possessions." Their
membership (even counting dissenters like me who only subscribe to QST to
"keep an eye on them") is a DISTINCT minority of those whom they CLAIM to
"represent."

Hi John - I'd very much be interested in knowing what experiments/research no-code techs have conducted or are currently conducting on VHF+, prior to granting them HF spectrum.

If some techs do have serious experimentation proposed for HF, they can currently either use the station of an HF-licensed operator to conduct their research (what HF amateur wouldn't want to lend his facility to such a experimenter?), or pass seven out-of-ten on the 5wpm code test, so I don't see any barriers confronting such research-minded techs. Also, the FCC used to issue an experimental-grade license - if these are still being granted, then this would be another recourse for the experimenters that you speak of.

Enjoy the weekend!

4522. FT920 mod here

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-06 00:00:00 UTC
From: cfisher@klis.com
Message-ID: <348aba08.5671254@news.klis.com>
Source record: 184978

YEASU FT920 TX OUT OF BAND

With the radio off, press[STEP] and [LOCK] (under VFO-A) and hold
these two keys in while you turn the raido on. Now release the two
keys.
Enter the following password: 0761161, then press [ENT].
Press [MENU],Rotate VFO B though the "U" settings till you get to the
"F" Menu (F-01 F-35).

TUNE to "F-33 your Display will say "DESTINA" PRESS ENTER
AND SELECT "OUTSIDE",Using VFO B.that is all there is to it!!!
THIS WILL LET YOU TX 1.8 TO 54MHZ,TO UNDO THE MOD SIMPLY SELECT F-33,
AND PUT IT BACK TO "USA"

The only other adjustments that are of any use is F-09 AM modultation.

After adjustments are made, Press [MENU] to save the new setting and,
exit to normal operation.

WARNING ANY OTHER ADJUSTMENT CAN AND WILL DEGRADE THE RADIO'S
PERFORMANCE.
I CANNOT BE RESPONSABLE...

73 COREY
VE1KCO

ps:please email me and let me know how you made out with the mod some
have said that it doesn't work mine works fine my cpu verison is
"F-01" 01.10 and my s/n is 7h050203

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #245 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 12-Dec:
-
1. FCC Receives Over 800 Electronic Apps as Vanity Gate 4 Opens
2. Hams to Be Aboard Three of the First Four ISS Missions
3. KC5VPH May Be More Active from Mir
4. Comments Due on ARRL Petition to Modify CW Exemption Rules
5. Chechnyan 1X5 Prefix Declared Ineligible for DXCC Credit
6. Schweitzer Institute Station Receives Antenna Donation
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Special Event Station Calendar
9. Work on Phase 3D Nears Completion, Satellite Waits for Ride
10. Weekly Propagation Forecast
11. US Takes Over Lead from Japan in Supercomputers
12. IBM Develops Expensive New Forecast System with NOAA
13. Company Offers Software to Fix Latest Pentium Flaw
14. Intel Develops Its Own Pentium Fix, Distributed by Microsoft
15. New "Thin Film Transistor" Monitor Line Introduced by IBM
16. "The RAIN Dial-up" from Chicago
17. Science Finds Use for Lava Lamps (Are Nehru Jackets Next?)
18. Program Note: The Twenty Second Solution
-
Funding for the program's transmission and production expense was
provided this week by a grant from Jack Halem, KA6DLX, of Willits
Ridge, California, where "This Week in Amateur Radio" is heard
Wednesdays at 7:30 PM in San Bernardino, Riverside, and Orange
Counties on the KA6DLX repeaters on 146.265/446.475 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
```

subcarrier. A fee has been paid to W0KIE for access to the satellite uplink.
-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

>cancellation of my subscription to 73. As much as he bad mouths the
>league, they produce a magazine with 10 fold the infomation than 73.

Not that I am defending Mr. Greene I do beleive that he publishes a cold fusion magazine. It is a bit pricey though.

Regarding QST it is a journal of amateur radio. Personally I don't care for QST because I am not interested in contests and what the league is doing. I am more interested in technical articles. I do miss ham raadio magazine though.

I consider Waynes editorials entertaining at times he does bring up good points at times

I do appreicate your response.

If you can get an amateur license without a code test (and by
memorizing the technical aspect), why not just buy a CB?

4535. KK7HO Forges Message

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-06 00:00:00 UTC
From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <3489108F.1048@innocent.com>
Source record: 184991

To KK7HO:

Because of your childish and ineffective desire to defame me, you have done something dishonorable in the extreme.

Not only is it inappropriate for you to re-post to rec.radio.shortwave part of a non-radio-related message I posted many months ago to another newsgroup; but it is dishonest almost beyond imagining to edit said message, as you have done, so that it states the precise opposite of what I actually meant! You placed my signature, and you yourself added (!) my callsign, _to something I did not write_.

Your duplicity, arrogance, and ignorance have not gone unnoticed.

To all others:

For those who want to see what I really did write, my Usenet messages are all archived at

http://www.dejanews.com

Just search for "kevin alfred strom" using both the old and new databases and you will find them all. The message edited and distorted by KK7HO is entitled "The Singular Case of My 'Resignation'."

With all good wishes,

Kevin, WB4AIO.

I have read Wayne for years. He is full of it. At one time, he was a
believer in NEW AGE religion which is truely a major cult!
Wayne wrongly predicted the end of IBM when the stock was $48.00 per
share. However, IBM has since risen to over $100.00 per share. Wayne
was dead wrong again.
There are a few things I can agree with Wayne Green about.
He and I both HATE the ARRL group of whiners and whimps.
WE both agree that government must be scaled down tremendously.

Ill share a personal story about Wayne. After reading 73 for years, I
have come to realize that Wayne does not know God, and he is
increasingly fearful of death. Which gives rise to the reason he posts
so many methods to avoid substances which may shorten life.

The 'European Repeaters Page' is on-line.

At this page are links to and frequencies of the VHF-UHF repeaters of
many European countries.

I can't keep this pages up to date all by myself. I need information.
So if a country isn't listed or if anything has changed, please let me
know!! If your find any information that could be of any value for
this page, let me know. I'm still looking for links to as many
European countries as possible! If there is a page which does
superfluous any of my own subpages, also let know. I rather have links
then data I need to maintain myself.

The most important thing is the address:
http://huizen.dds.nl/~ffes/

Contempt before investigation fits you like a glove.

Doesn't matter anyway. In the worst event, he can just get an account with Mindspring. Afterall, O'brien has more than proven that Mindspring will protect anybody, no matter how libelous their writings.

The only reason O'brien hadn't been sued yet for libel is that he has no assets.

CLOSED CIRCUIT ADVISORY

According to our support fund administrator Andy Jarema, Newsline is once again in need of funds to continue operation. As most of you know, the majority of donations go directly toward paying our monthly phone bills and electronic mail services. This is how we get the news, and it is how we deliver it to you. If we loose the telephone, the E-Mail or both, we will have no way to get the news and no way to disseminate it to you.

Simply said, we need the assistance of every listener who appreciates Newsline to help to keep it on the air. The Newsline Support Fund is separate from the service itself and exists for the purpose of channeling

donations directly to the those providing services to the Newsline organization.

The address is the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

That ends this weeks closed circuit advisory with Newsline Report number 1060, for release on Friday, December 5th, 1997 to follow.

<*>

The following is a QST

WRC '97 ends with no bad news for hams and a newly elected ARRL Director says he will seek enforcement against potty mouth rules violators. These stories and more on Newsline report number 1060 coming your way right now.

<*>

Hams OK At WRC '97

Ham radio fared well at the now concluded WRC 97 Conference in Geneva, Switzerland. Delegates approved a resolution encouraging administrations to facilitate the use of ham radio and other decentralized means of communications for disaster mitigation and relief operations. This resolution eliminated the need for Resolution 640, which defined how certain ham bands could be used for international disaster communications by non-amateur stations.

WRC 97 delegates did agree to upgrade the Earth Exploration Satellite Service from secondary to primary at 1215 to 1300 MHZ, which should have only minimal impact on amateur use of 1240-1300 MHZ. The presence of these satellites reduces the possibility that other, less-compatible services might later be introduced into this band.

In other allocation decisions, amateur satellite segments were not included among allocations for wind profiler radars. Except for a worldwide primary allocation at 1270 to 1295 MHZ, the only specific allocations for wind profiler radars are in Region 1, and those are on a secondary basis.

Region 2 administrations were urged to implement wind profilers in radiolocation bands at 440 to 450 MHZ, 904 to 928 MHZ, 1270 to 1295 MHZ while protecting amateur satellite and weak-signal operations, and 1300 to 1375 MHZ. The delegates agreed that the bands 420 to 435 MHZ or 438 to 440 MHZ could be considered for use in situations where there was incompatibility between wind profiler radars and other radio applications at 440 to 450 MHZ or 470 to 494 MHZ. In this case, too, the amateur-satellite segment is protected. For an in depth report on WRC 97, visit the ARRL's website at:

www.arrl.org

(Via ARRL)

<*>

N8TI vs. Bad Hams

A newly elected ARRL official appears to be an enemy of potty mouths hams and others who violate the FCC rules. Joe Falcone, N8TI, who beat out incumbent director George Race, WB8BGY to become the new Director in the Great Lakes Division says that he will make it the primary goal of his freshman term on the ARRL Board to get the bad guys off the air:

"My number one goal is to have the FCC start to proceed against these jerks -- I use that as a phrase -- who use profanity, intimidation and even ethnic intimidation on the air. I believe that there are only 20 or 30 of these people and I think it is outrageous that you are afraid to let your young child be alone with your radio for fear that they night hear something." Falcone

Many of those who are involved in this kind of on air activity claim that what they do is constitutionally protected. That their vulgar language and intimidation tactics are their way of practicing their freedom of speech. Director Elect Falcone is an attorney. He disagrees:

"I do not believe that it is a constitutional right to use profanity on the amateur airwaves. It's no more of a constitutional right than is driving at 120 mph down a highway." Falcone

Falcone appears to be echoing the words of another ham radio attorney. It was the late Joseph Merdler, N6AHU who brought the same problems of foul mouth hams and malicious interference to the ham radio public eye in 1979. N6AHU passed away in 1995. Before he passed away, Merdler was credited with helping to remove over a dozen rules violators from the airwaves. Since his death there has not been any one decisive leader that the Amateur Radio public could look to in handling this problem. Now the hobby has Joe Falcone, N8TI saying he wants the bad guys taken off the air. He is also in the political position to make his words stick.

(Via Amateur News Weekly)

<*>

FCC Releases OET 65 "Supplement B" Just for hams

The long awaited specific guidance for hams in complying with the FCC's new human exposure to radio frequency electromagnetic field requirements is here. According to Bob Gonsett, W6VR, of Communications General Corporation, radio amateurs can download the PDF version to get both the text and graphics. Go to:

www.fcc.gov/oet/info/documents/bulletins/#65

(Via CGC Communicator, W6VR)

<*>

Regulation Review

The FCC has also begun its first comprehensive biennial review of common carrier and broadcast regulations. The review is required by the Telecommunications Act of 1996. FCC Chairman Bill Kennard says that this first review is a key time for the Commission to take a serious top to bottom look at all of its rules. Bottom line: Expect changes to take place.

(Via ARRL, others)

<*>

Timecode By Radio

That's the sound of SMPTE Timecode. It's a method of putting frame numbers onto videotape so that a video editor knows where he is when editing a television show. The reason you have never heard it on the air is that until now nobody has ever thought to use radio to transmit it.

Now a company called Pro Source has introduced a new device called the Scriptboy. The system consists of a miniature UHF transmitter operating near 418 MHZ that connects to the studio timecode source. A miniature receiver and timecode reader is attched to a clipboard. This lets a person taking production notes see the timecode numbers without being restricted to one place where there is a wireline connection.

While timecode will be a new signal for monitoring enthuiasts, it wont mean much even if you buy or build a timecode reader. All it will be is a bunch of numbers that tell the hour, minute, second and frame of a tv show as its being taped.

(Via advertisement)

<*>

Texas Antenna Win

Hams in Greenville, Texas, have succeeded in getting ham radio antennas and towers exempted from a local telecommunications facility ordinance. The Sabine Valley Amateur Radio Association worked hard to win the exemption for amateur radio. This, by getting the City Council to reject a Planning and Zoning Board ruling that would have kept ham antennas in the ordinance. The exemption is expected to serve as a model for a larger section wide ruling.

(Via ARRL)

<*>

Elected

Last November 4th's general election saw two hams elected to public office in California. Now comes word that Tim Richardson, WB4HZT was also elected

to office that day. Richardson of Acworth, Georgia, a suburb of Atlanta, was elected to a four year term on the Acworth City Council.

(Via WB4HZT)

<*>

Busy October For Westchester RACES

RACES has been busy in in Westchester County New York. On October 22nd, the area RACES group was requested to supply a half dozen operators to provide logistical communications support for a bombing emergency response drill at the Westchester County Medical Center in Valhalla. RACES members helped in the communications van, acted as shadows for the Emergency Department personnel and provided communications from the Emergency Room. Fourteen simulated victims were brought to the Emergency Room along with one real trauma patient from a traffic accident.

(Via Hudson Division Loop)

<*>

Expanded AM Construction Permits

Populating the expanded AM broadcast band has begun. Radio World magazine reports that despite a few unsettled Petitions For Reconsideration, the FCC has issued its first two construction permits for new audio stations in the expand AM broadcast band. KQXI and KKSL received their permits in late September. The two are among eighty eight stations eligable to move into the expanded AM spectrum.

(Via Radio World Magazine)

<*>

News Organization Admits Cloning Pagers

The Wall Steet Journal reports that officials at Breaking News Network has pleaded guilty to charges that they illegally intercepted pager messages being sent to members of the New York City police and fire departments. The Journal says that the owners of the Fort Lee, New Jersey based company, and a general manager pleaded guilty to two counts charging them with intercepting and then distributing the pager messages. Breaking News Network also pleaded guilty to one count of cloning pagers programmed to intercept the messages. Sentencing will take place next year.

(Via published news reports)

<*>

Cronkite Calls For Higher Journalistic Standards

Retired CBS News anchor Walter Cronkite, KB2GSD, has urged media companies not to pursue unreasonable profits at the expense of journalistic integrity. Cronkite made these comments while accepting an award at the

Radio and Television News Directors Association conference in New Orleans. KB2GSD said he understands that the idea is utopian, but adds that it might combat what he perceives as the 'tabloidization' of much of what is reported.

<*>

Free Handicapped Ham Camp For CA

Do you know a person who lives in California, has a physical disability or sensory impairment, and who is interested in learning about Amateur Radio? According to Pat Tice, WA0TDA, the next Courage HANDI-HAM Radio Workshop will be free of charge for California residents who meet HANDI-HAM membership qualifications.

The camp is for those handicapped individuals who want to obtain a first license or upgrade. The 1998 campout is slated to run from February 24 through March 1st. The facility is located in Ventura County, and is completely wheelchair accessible.

This offer is made on a first come, first served basis as space is limited. For information and an application, contact:

Jane Rova
c/o Courage HANDI-HAM Center
3915 Golden Valley Road
Golden Valley, Minnesota 55422

You can also contact them by e-mail to:

handiham@mtn.org

(Via Handi Hams)

<*>

SCARC Conducts Annual Toy Drive

For the second consecutive year, the Sussex County New Amateur Radio Club is sponsoring a toy drive to benefit The Big Brothers and Big Sisters of Sussex County, New Jersey. The club asks that all gifts be new and for boys and girls between the ages of infant to 18. In addition to the toy drive, the club accepting donations of non-perishable foods. Donations must be received by December 18th.

(Via Hudson Division Loop)

<*>

YHOTY Winner Does More

The 1997 Newsline Young Ham of the Year winner is not resting on his past achievements. Under the leadership of Brian Mileshosky, N5ZGT, Albuquerque, New Mexico Explorer Post 296 has had four young Explorers

upgrade their licenses in the past month.

Jay Miller, WA5WHN tells Newsline that this group will participate in a major VHF contest in the near future. Operation will probably concentrate on six an two meter CW a SSB.

Explorer Post 296 is jointly sponsored by the Albuquerque Amateur Radio Club and the local Caravan Club. The Caravan Club is one of New Mexico's oldest ham radio organizations. It dates back to the late 1950's when meetings were held on 29.6 MHz AM as area hams used to convoy everywhere together on weekends.

(Via WA5WHN)

<*>

Brochures On The Road

If you're traveling through Connecticut, don't be surprised if you see ham radio brochures at several Interstate rest stops and Bradley International Airport. The Leagues' Educational Activities Department has distributed the pamphlets as part of its effort to spread the word about the hobby. The brochures titled "Ham Radio Today and Into the Future" tell what ham radio is all about and refer readers to the ARRL.

(Via ARRL)

<*>

DX

In DX, C6AIE will be active on Dec. 10th through the 17th from Abaco Island in the Bahamas. That is in grid square FL16 and the group plans stations on 6 and 2 meter CW and SSB. Schedules can be made for either band by E-mail to:

wz8d@goodnews.net

And the The DX News Sheet reports that EP2FM who serves as president of the Iran Amateur Radio Society is again active as the first legal amateur station in Iran there since the station was closed down in 1983. Look for him around 16:00 UTC on 14.200 MHz. QSL as directed.

(Via DX news sources)

<*>

Yo NSS Shopmates

This word to personnel who served at the Navy High Power Radio Transmitting Station in Annapolis, Maryland. If you were stationed before of after World War 2, there is a group that would like to hear from you. Contact Merle Paten, K6DC by e-mail to: k6dc@aol.com

or at his callbook address. There is also a new webpage for the group. The URL is at:

http://members.aol.com/k6dc/nss.html

(Via W6TNS/4)

<*>

Hams Radio

And finally, Laura Owens of Knoxville, Tennessee had seen enough television
police shows to know what to do when a police two-way radio landed on her
street.

Owens was standing in her front yard when a police investigator drove off
with his hand-held radio on top of his unmarked cruiser. Needless to say,
it did not stay there very long.

So Owens picked it up, pushed the "transmit" button and said "I found this
on the street, what do you want me to do with it?" The dispatcher asked for
her address. In a few minutes the policeman came back to get the radio.
He was so gratified that he deputized Ms. Owens on the spot.

The kicker. The police officer who forgot his radio. His name is Tom Ham.

4546. Getting service for a Ten-Tec?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-06 00:00:00 UTC
From: kenk@primenet.com
Message-ID: <66bqf1$8jm@nntp02.primenet.com>
Source record: 185002

I'm trying to find a repair center to get my old Ten-Tec Century/21 fixed. The dial doesn't turn with the knob. Despite a handful of spline, allen, philips, and regular screwdrivers of various sizes I can't loosen the knob set-screw so I can take things apart and see what's wrong.

Anyhow, to get authorization to send them the transceiver for repair, I emailed Ten-Tec three times, no response. Called, was told someone would get back to me, nobody did. Sent them a snail mail with my snail and email address and phone number two weeks ago, no response. I'm afraid to ship it - I'll probably get it back untouched shipped collect because I have no return authorization number. I think the "legendary" service mentioned in their ads should be more accurately changed to "mythological". Guess what brand of ham radio equipment I'll never buy again?

Anyhow, I need to find a good service shop, preferably in the southwest, or at least west, to hold down the shipping charges. I'd prefer to use someone that has been recommended to me rather than pick someone blind from the ads in QST.

TIA.

Ken

satellite dish installations
Regards,
Andrew Danby G0KGA
Danby Satellite & Aerial Systems

www.danby.co.uk

Hello everyone,we can supply your radio communications equipment and also
provide installations of aerial towers & large beams,etc.Please feel
free to visit our web site and call should you require assistance.We have
a great deal of experience in large aerial & large satellite dish installations

Regards,

Andrew Danby G0KGA

Danby Satellite & Aerial Systems

Three months old and absolutely as BRAND NEW. Package included:

FT-50RD w/5 Watt FNB-41 Battery (unused), Latest model out.
Extra FNB-41 5 Watt Battery (still in package)
Extra FNB-40 2 watt battery (the one I use with radio)
Maha MH-101-Y3 Desktop Drop-in Rapid Charger
CN-3 BNC to SMA adaptor

All accessories (unused),and packaging, warranty card, etc. The 2 FNB-41's
are still in the box and un-used. Radio has been used for monitoring in the
house
only. Condition is guaranteed "as new". Will ship for $400. I just dont have
any
interest in VHF/UHF anymore. Contact Van, W0NZV.

4554. Tuning screw adjustments for microwave cavities???

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-06 00:00:00 UTC
From: electron78@aol.com
Message-ID: <19971206190701.OAA00350@ladder02.news.aol.com>
Source record: 185010

In some books I read that the mechanical tuning screw for a resonant microwave cavity, when inserted further into the cavity, will increase the frequency of the cavity due to the screw decreasing the cavity's volume; while in other books I read that this same action (of sending the screw deeper into the cavity) will actually decrease the resonant frequency of the cavity due to capacitive effects of the tuning screw. Who is right ?! Any help would be most appreciated!

Thanks,

Mike

Un fortunately, some people are afraid of freedom/responsability. Pirate
radio is a freedom of speech issue. I live in the 5TH larest media
market, with approx. 150 stations to select from. The stations are owned
by 5 corprations!!!! Not much selection, all stations sound the same.
Same country music, same rock music, same SYNDICATED talk show host, not
much to choose from. Out of 150 stations.I like the idea of local radio
activity, not some body with family problems in kansas, calling
Dr.Laura! Sad day when certian Americians put down the Idea of freedom ,
after all Who said resticting the airwaves is constitutoinal, I have a
freedom of speech, and a RIGHT to use it in any way, I should not need a
licence to use that right (By the way, licence = money) Thank you for
your time,responses encouraged, after all I would not want to infringe
on you freedom to speech, and I do not recomend puting down any ideas
opposed to mine.

I am searching for some NOS 6AJ6 - nine pin miniature style tubes. This tube was also produced in an octal based variety, however, I need the nine pin miniatures. Please contact Rog42@aol.com. Thanks.

4557. Re: CBers to Purchase 10 Meter Band in USA

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-06 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19971206211901.QAA15351@ladder01.news.aol.com>
Source record: 185013

in reply to this thread, this comment was made about illegal stations operating on the 10m amateur band...

>I've listened there for years and I have never heard any CB there unless
>your Talking the set of frequencies between 27 and 28MHz but I didn't know
>that was classfied as 10 meter freqencies.

I do considerable monitoring on 10m(28.0-29.7 MHz). I hear illegal stations operating here on a regular basis. The difference in this reported experience is, I think, the result of propagation. During these years on low sunspot activity most often we get a north-south propagation, even thru sporadic E. When lengthened, this includes transEquatorial paths. From my QTH in Colorado, then, I have best condx to the 4 and 5 call areas, and into Central and South America. I would expect that you would have best cndx to the Northeast.
The majority of illegal activity which I hear(almost daily) is from Spanish-speaking operators. By beam heading I take these stations to be in Fl, La, ans Tx, so for as the Stateside offenders are concerned. Mexico is the primary non-U.S. offender. It helps to speak at least some Spanish.
Next highest on my list are U.S fishing boats in the Delta-and Carribean coastal waters. These stations discuss fishing grounds and shrimping flats. I hear mostly Cajun and Vietnamese here.
Because I listen often, I have the major frequencies programmed into the radio's memory channels, and let the rig scan in squelch while I do other things, or operate on other bands. Most of the activity is centered 28.0- 28.1 Mhz, on even 5 Khz steps. The Vietnamese boats favor FM, and are found higher: sometimes up to 29.4 Mhz. It is my expectation that during the next solar maximum 10m will be difficult to use by licensed hams, particularly the lower CW allocation(good news for Carl?).
The incidence of use by unlicensed U.S. truckers, etc, is low from my monitoring site. When heard, they are most often on 28.085 Mhz.
Tuning for illegal stations is easliy done. First, tune looking for AM carriers. Any you find below 28.9 are immediately suspect(typical ham use of AM on 10m is certered at 29.0- 29.1 Mhz). Stop and listen for a bit for other syrong indicators, such as "roger beeps," or typical CB lingo.
My second target(and sorry ladies) is tune looking for female voices. As the number of licensed YL's is low, when heard they are an oddity: particularly when speaking Spanish! When you consider the small number of YL's we have stateside, in a reatively gender-equal society, you can appreciate how unusal a Spanish-extraction female would be, given their current social structure. The females that I hear are very often speaking directly, or via 'phone patch to relatives in the States.
Lastly, the next easiest group to locate when tuning thru are those with peculiar operating techniques. In Spanish you will hear the most familai "hola" called, but another favorite for someone trying to start a contact is to call "buenos (tardes, noches) over and over.

Well, enough of this. Its a major interest of mine. If you are interested also, write to ARRL, Intruder Watch, for more information. If ARRL doesn't do it WHO WILL? Which allows me to reply to those who see no reason to belong to ARRL. Does a drowing man question the motives of his rescuerer? It may not be the best, guys, but its the only game in town.

The survey was conducted by an outside contractor, and those who were selected to recieve it were chosen in a manner intended to be a random sampling. For those who say the questions printed in QST, it was heavily biased in survey style AGAINST code, and not the other way around.

Could be either way, Mike, depending on how the cavity is built, and where the screw is inserted in it. I have a microwave wavemeter where the screw enters one end of the cavity and *does* reduce cavity volume and increases the frequency when turned in. I also have gunnplexers where the screw is inserted transverse to the cavity at a current node and the capacitance decreases the frequency.

I suggest you subscribe to the QRP email list ("QRP-L"); the 2000+
folks on there are enthusiastic builders of low-power HF gear, and
have a ball working each other on the air. To subscribe, send an
email to majordomo@lehigh.edu and only write: subscribe qrp-l
and you'll be hooked up. WARNING: That list generates a *lot* of
traffic - your mailbox will quickly fill up unless you check your
mail at least once per day. (*Please* make sure you save the Welcome
message - it will contain the instructions for unsubscribing.)

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that

the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

Read what I said ... the ITU treaty specifies NO speed requirement. The 13 wpm
and 20 wpm tests (and the caste system of license classes based on those tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can visualize
stating it ... what part don't you understand???)

>The average ham isn't an engineer. Thus, the average article in QST has
>to appeal to the average ham. That means articles of little to moderate
>technical content.

That's true. But Carl isn't suggesting that *every* article in QST be more advanced than how to solder a PL259 on a hunk of coax. He's asking for a bell curve distribution which includes both the very simple beginner stuff as well as some leading edge material to remind amateurs of what amateur radio is supposed to be about. Today, even CQ has better technical content than QST. (And that would have been a shocking thing to say even ten years ago.)

>The ARRL has a "technical" magazine for experimenters, QEX. I've never
>seen it, but it would seem to me that you're looking in the wrong place
>for what you want and then blaming the League for it (akin to blaming
>the supermarket for not having chocolate syrup in the same place as
>milk.)

I'm not surprised that you've never seen it, Michael. That fits with your know nothing attitude toward anything more technical than closing a switch or licking a UPS label. But QEX was announced as a magazine to allow technical experimenters to *quickly* share results of ongoing experiments, sort of an expanded version of the Technical Correspondence column in QST, but with a quicker turnaround time. It was not intended to off-load all technical material from QST. It was emphatically not intended to host major technical articles such as those which used to be the lead features in QST. That statement of purpose was in issue number one.

But in fact that is what has happened. Anything remotely technical gets shuffled off to QEX where less than 10% of ARRL members ever see it. And to add insult to injury, the ARRL let publication of QEX lapse for six months, cutting off even that small audience from any exposure to technical material.

I fired off a letter to Dave Sumner about this, but he didn't even have the courtsey to reply. More recently, I talked face to face with my director about this. He at least acknowledged that it was policy to dumb down QST in hopes of attracting new members. I found that shocking, and told him so. I reminded him that it was the technical leadership by QST which led many beginning amateurs to aspire to live up to our charter responsibilities and caused them to start to investigate the technical possibilities offered by amateur radio. To try new methods, to adopt new techniques, to experiment, to learn. Etc.

It was the technical information in QST and other League publications which served to educate most current amateurs about the technical facets of amateur radio. And if we don't hold that up to the beginner's view, how could we expect the new generation of amateurs to be inspired to grow in the skills we wish to foster? They need to see it to spark their imaginations and to expand their sense of the possible. They need to see it to be challenged. He didn't have a good answer for that.

He appears to view the ARRL as a follower and panderer rather than a leader in the one thing which makes amateur radio a unique radio service. He suggested that technical leadership should be the responsibility of others, such as TAPR and AMSAT. I in turn suggested that perhaps only TAPR and AMSAT deserved my membership dollars in that case. That seemed to surprise him.

And BTW, I tend to consider my director one of the more responsive and responsible members of the BOD. He listens. He's a genuinely nice fellow. But he doesn't seem to grasp the essential nature of the soul of amateur radio, or the need to feed and nurture that soul from time to time. He lacks "that vision thing" which is needed in a leader. I asked him where he's trying to take amateur radio, and he didn't have an answer. I got the impression he didn't even understand the nature of the question.

"DavidC" <davidc@bit-net.com> wrote:
"we cannot long survive when selfishness prevails."

Quite the contrary. The trouble is that people are NOT acting selfishly - that is to say, they are not acting in their own interests.

When people act in their own interests ("selfishly"), they are typically seen to be generous, respectful, productive, and creative. It is when people act selflessly that morals decay, nationalistic aggression breaks out, and individual rights are expunged.

America is now a carnival of errors prompted principally by the toxin of greed and the blunder of selflessness. Greed can be seen to be a corruption of selfishness, in the final analysis quite contrary to self-interest.

Hi George, the treaty does not prevent the FCC from changing the speeds
of the Morse code tests. The general Morse code test could immediately
be
lowered to 10wpm or even 5wpm and still be perfectly treaty-legal.
The Morse code flag and the IARU treaty flag are simply diversions so
no-code-test folk will attack the flags instead of the problem.

Since Andseron is either too slow or too senile, I am posting the
following again.

Again, for lennie's geezer sake. The analogy is that the supposed
"old fartz" within the ARS are not necessarily a unique group.

If anderson, in his senile fog wants to make something other than that,
that's entirely up to him. It was a comparison and an observation,
nothing more nothing less.

If anderson doesn't like reference to his beloved military, too bad. If
anderson doesn't want to believe that his beloved military is the
juggernaut it use to be, so be it.

IMO, this analogy is well within his royal posters constraints to what's
allowable and was is not.

Interesting news article on television and in the paper. In an effort to
reduce military costs, there is a faction within the military advocating
the increased use of HIGH-TECH pilotless drones for surveillance. At a
cost of a few $100,000 vs several million, it seems like a good idea.
HOWEVER, there is a small VOCAL minority within the pentagon that is
resisting this change. Their contention..."Since man first took to the
air, there have been pilots at the controls, why change now for the sake
of change? Wonder if they've been reading these newsgroups?

Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote:
>
>How about you folks taking this thread to rec.tv.hdtv?

Gee, I hope it continues right here instead. This should be a very
interesting topic for technically forward-looking people, which used
to include radio amateurs.
I'm happy to see a real technical discussion on this group for the first
time in what seems like years.
Its especially interesting to read the comments of those are are
happy with the current NTSC system. I have seen a demonstration of
the MUSE system and it really impressed me, even better than film.
Pay TV with commercials has been a fact for some time and people will
put up with that, just as they will rent VHS tapes of very low video
quality.
The real question is whether what is now called DTV will be HDTV and
if the satellite broadcasters will own the whole market by the time
the DTV terrestrial broadcasting starts.
If the medium is the message, then its long been time for a change.

Really? You found it shocking? With columns like "the new ham companion"
answering the most basic questions that ANYONE who passed the Tech theory
should be able to answer, or at least crack open their handbook and look
up, you're "shocked" at the content of QST?

Ham radio is no longer a technical hobby. Its an appliance operator hobby
with little to moderate technical content for those interested. The
majority just want to communicate, they don't care about the underlying
technology all that much. And, QST reflects this.

About 5 years ago, I made a series of firmware modifications for a
Hamtronics repeater. They included, amoung other things, a way for someone
to use the "add-on" voice IDer on a rotating basis (by default if you had
the voice ID module, it would use it every time, instead of once every
6 ID cycles, or roughly hourly.) The resultant patch was roughly 30
bytes of machine code, and maybe a page of explanation. QST regarded this
as "too technical", even though Hamtronics was a major advertiser at the
time, often having full-page ads in QST.

>I reminded him that it was the technical
>leadership by QST which led many beginning amateurs to aspire
>to live up to our charter responsibilities and caused them to start
>to investigate the technical possibilities offered by amateur radio.

That's nice, but that's all history. This is the day of instant
gratification. Free communications. Technicalless content. The
amateur radio you aspire to is long dead, killed by the repeated
dumbing down of our licensing requirements over the years.

But, getting back to what you said earlier on:

>I'm not surprised that you've never seen it, Michael. That fits with your
>know nothing attitude toward anything more technical than closing a
>switch or licking a UPS label.

I'm sorry to see an otherwise serious discussion degraded to Stevenson's
level with personal insults, Gary. Unless you're prepared to present
solid evidence of my technical ability, your personal insults are
best kept to yourself.

(oh, and by the way, I also change fuses and I *never* lick a UPS label
(I tape them on...)... Which color is ground again?)

>But in fact that is what has happened. Anything remotely technical gets
>shuffled off to QEX where less than 10% of ARRL members ever see it.

So, let's see. First you insult me because I readily admit that I don't
subscribe to QEX, and yet you later freely admit that 90% of ARRL members
never even see QEX. I guess I'm supposed to be held to a higher standard
than that other 89.99%

>It was the technical information in QST and other League publications
>which served to educate most current amateurs about the technical
>facets of amateur radio.

Our current crop of amateurs is also being educated by QST. The
"New Ham Companion", with questions like "I keep seeing PTT mentioned in my
HT manual, but I can't find a button labeled PTT. What do I do?"
epitomizes the "technical content" of today's radio amateur.

> cable channels do now. Bon Appetit!

I manage a video network (not a cable system) that carries a lot of broadcast and satellite channels, so I have followed the HDTV/ATV issue closely.

It will cost the average broadcast station well over $1 million to convert to HDTV/ATV format, more if they have to build a new tower. The only way they can recover that investment is to increase advertising revenues. Broadcasting a single channel, as they do now, even if it is HDTV, will not get the job done. The only way you can develop a business plan that makes any sense is to think of multiple channels, to increase your overall advertising minutes. Then maybe, just maybe, even if the cost per minute drops (because, now that there are more minutes available, supply and demand suggest the market value of each minute will decline) you can increase your income to return your investment. But, I think even THAT is questionable. Makes me glad I am not in the BC TV business.

I don't like to look for bad guys, but if there is someone who is going to make out like a bandit on this deal, it is the electronics manufacturers. There are (plus or minus) 90 million TV households in the USA. If only 50 percent of them buy one new TV or converter, that's a TON of new business they would not have had otherwise.

Tim K9WX

4588. New Outbanders Take 10 meters, Predictions 1998 & Future...

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-07 00:00:00 UTC
From: "Amor Powers, Radio" <power@radio.net>
Message-ID: <348B35FF.40D6@radio.net>

New Breed of Outbanders Take Aim on 10 meter Band... capture by 2001.

With the New Year coming, and the century/millennium not far behind, it is a time for futuristic thinking, predictions, and prognostications. Not to be outdone by the petty debates currently raging, here is one prediction which is absolutely sure to come true, an event of fate!

The beginning of this sunspot cycle is bringing a new era of confusion to 11m. The proliferation of cheap wideband or 10m radios in the past few years has brought a boom in 11m activity to the rapidly expanding southern-hemisphere, tropical, and previously under-developed markets of the 2nd and 3rd world.

With this boom, good North-South propagation is now poised on the cusp of bringing never-before-experienced levels of interference to both hemispheres (since skip is reciprocal). This has led to increased crowding of the traditional 11m band. The "new" contingent of outband operators in far-flung areas of the world have little knowledge or respect for the traditional taboos of the 28MHz or other frequency limits. They are not "Classic American CBers". 10m and the world above 28MHz is so much quieter than 27MHz, that new outband operators around the world are squatting there, much to the consternation of ham operators.

This trend will continue unabated, and predictably will become a source of un-mitigatable frustration amongst hams. For many hams, the lower end of 10m (28.0-28.5) will be considered "The Lost Band" peaking and eventually conceded in mid-year 2001.

SB DX @ WW $OPDX.334
Ohio/Penn DX Bulletin No. 334

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 334
BID: $OPDX.334
December 8, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2KKZ, W3LEO, N4GN, K6RIM, K8RF, N0TG, N0AH, DL2HEB, DL7IO, DL7RAG, DU9RG, F6AJA & LNDX, G3SXW, G4BUE & DX News Sheet, G0ULN, LA6WEA, OH2KI, ON4BDS, TU5EX and ZS6PHD for the following DX information.

3B6, AGALEGA and ST. BRANDON. The "DX News Sheet" reports that Dov, 4Z4DX, and others will be active from this rare spot in May, 1998, as 3B7AZ and 3B7/HB9JAI.

3D2, FIJI. Hide, JM1LJS, is making an early announcement of his upcoming trip here in the new year. His activity will take place April 30th, through May 7th (of 1998) as 3D2LJ. Operation will be all bands including the WARC bands. QSL via home call.

4G, PHILIPPINEGS (Special Event). The special callsign 4G50N (4GfiftyN) was issued to ACES (Amateur Communications and Emergency Service Club) of Naga City, Philippines, to celebrate Naga City's 50th charter anniversary. This call will be in use from January 1, 1998, to March 31, 1998. QSL via DU9RG's new address: Robin U. Go, 818 Acacia Avenue, Ayala Alabang Village, 1780 Muntinlupa City, Philippines.

9M8, EAST MALAYSIA. The "DX News Sheet" reports Peter, PB0ALB, is planning to be active again for six weeks in April/May of 1998 as 9M8CC. Activity will be from Serian, 50 miles from Kuching, Sarawak. Operations will be on all bands. QSL via home call.

C5, THE GAMBIA. Lee, G0ULN, reports to OPDX that he will be here from December 19th to January 9th (1998). He will be on holiday in Gambia, but has received permission to take his H.F. radio with him. He will be signing C56/G0ULN, unless he is able to get a local call then it might be C56LE. Lee will be active daily around 14200 kHz and 21200 kHz (+/- QRM), on SSB only. He will be using an Icom 706 and a 1/2 size G5RV. QSL is via Lee Fuller, PO BOX 803, Hull, England, HU7 4BY.

DU100, PHILIPPINEGS (Special Event). Look for this special prefix to be used during the whole year of 1998 to celebrate the Philippines' 100th year of independence.

FG, LES SAINTES ISLAND. Alain, F2HE, will once again be active as FG/F2HE from this French Guadeloupe island (IOTA NA-114) between February 1-15th.

FT5X, KERGUELEN ISLAND. The French LNDX reports Helios, F6IHY, has left Reunion on the boat "Marion Dufresne" (ed. GEEE! Where did I hear that name before?). He will stop at Crozet Island from December 6-9th, without doing any radio activity. Helios will, however, arrive at Kerguelen on December 12th. He will use the FT5XN callsign for 6 months. He will use an IC-730 with a vertical and dipole. His suggested frequencies will be: SSB - 14209, 21209/309, 28509, 18159, 24959 and CW on request. QSL via F6PEN via bureau.

FT5Z, AMSTERDAM & ST. PAUL ISLAND. Eric, FT5ZG, has been showing up on 20 meters around 14278 kHz between 1500 and 1630z. Sometimes there is a list operation being taken by F5PFP. QSL via F5RQQ.

HP, PANAMA. You have little over a week left to work Gerard, F2JD/HP1XBI, before he leaves Panama on December 16th. He will go back to France, but he may be returning to Panama in January.

IOTA NEWS......
David, ON4BDS, informs OPDX that his job will be taking him to Umea, Sweden, in early February, 1998, and he will stay there until the end of July. Off the coast of Umea, in the Gulf of Bothnia, there are two IOTA island groups, EU-135 Holmon island in SM, and EU-101 Norrbyskar in OH6-land. David states he just can't resist and will activate them both. Look for SM/on4bds/P and OH6/on4bds/p on the usual IOTA frequencies during the weekends. He has no clue when he will be active, and how much time he will spend on each island. He knows for sure that he will activate both groups for at least a weekend, but if the pile-ups are good, he will spend more weekends there. David will announce any planned operations a few weeks in advance. He will be taking his TS-50 with his switched-mode power supply and a FD4 wire antenna. He mostly works SSB, but if you want a CW QSO, don't hesitate to ask. QSLs are preferred through the bureau via his home callsign, or direct to David Steeman, Kapelweg 11, B9200 Dendermonde, Belgium (CBA).

Ulli, DL2HEB, will use the callsign OZ/DL2HEB/p from Roemoe Island (EU-125) in the Danish Northsea Group (This island is actually well known because of the many stranded whales!). He will be active from December 19th through January 2nd (1998). Operations will be on 80-10 meters. He will only use CW and the "modern digital modes" (Amtor, Pactor I/II). All will be done by QRPower, maximum 4 watts. Check the IOTA and QRP frequencies, especially on CW, 14040 and 14060 kHz. QSL to his homecall DL2HEB via the bureau.

J7, DOMINICA. Bob, W2KKZ, will be operating from here March 1-8th (1998). He will be active for only part of the ARRL DX SSB Contest that weekend. He plans to be on 80-10 meters CW and SSB. He expects to be using the

J7/W2KKZ callsign. QSLs go to the home call direct or via the bureau. He will QSL 100 % via the bureau shortly after his return.

K3VOA (Rare Section in the 10 Meter Contest). The Potomac Valley Radio Club (PVRC), thanks to the hospitality of the Voice of America Amateur Radio Club, will again activate K3VOA for the rare DC Section multiplier in the ARRL 10 Meters Contest December 13-14th. The multi-operator team (W3LEO, K3IXD, KD4QVT, N3NT, and WB3ECU) will be active on both CW and SSB. QSLs for this contest only go to W3LEO [ex KA3TGY], CBA, SASE please.

LA, NORWAY (80 meters). Ken, LA6WEA, reports to OPDX that there are hardly any times available during the winter season that LA stations can work the U.S. stations during their sunrise. He states, "We up here in the north (66.09N) are now in the greyline or darkness 24 hours." Ken mentions that he will be active almost everyday from 1100-1500z along with a couple of other Scandiavian stations too. So, look for them around 3780-3799.9 kHz.

NEW OFFICERS/DIRECTORS.......
The Redwood Empire DX Association (REDXA), in Petaluma, CA, recently held an election of officers and directors. The new officers and directors, who will assume office in January, 1998, are: President - K6RIM, Al Burnham; Vice President - N6AD, Wally Pugh; Sec/Treasurer - WA6IKQ, Jim Selmi; Director - K6ANP, Len Giraldi; Director - N6YEU, Fred Leoni; and Director - N6OJ, Chuck Ternes.

The Mile High DX Association has elected the following officers: President - Don McCoy, W0DM; Vice President - Bill Leahy, K0MP; and VP/Treasurer - Greg Dunn, W0ZA.

HEADED TO THE PACIFIC. Northern Ohio DX Association (NODXA) members and very good friends Holger, DL7IO, and Brigit, DL7IQ, will once again head back to the Pacific Ocean. This will be mainly a holiday/vacation trip. Holger states this is the first time in 8 years that Brigit and he will be going on a trip without their good ham radio friends. (Holger... Only she and me...) By the time you read this, Holger and Brigit, will be on their way to Vanuatu and should be there by December 9th. Currently they do not know what their callsigns will be. However, Holgers hints they hope to get something like YJ??IO and YJ??IQ. Their activity will last until December 16th, and then they will travel to the Solomon Islands (H44). Holger will be active again as H44IO (many may remember his activity in late 1992 along with his friends Tom and Frank) and Brigit is hoping to get H44IQ callsigns. Their stay on the Solomons will last only until January 3rd (or possibly the 10th). If they leave the Solomons on January 3rd, they will return to Vanuatu for another week. If they end up leaving the Solomons later, they will head to the Fiji and then home on January 12th. There will be no operation from Fiji. The equipment to be used on this trip are a Yeasu FT-890, 3 element beam, R7 Vertical and dipoles. Holger mentions that Lyndon, VE7TCP, will be providing a log search engine on the WEB for them during their activity. They will be able to upload their logs on a daily basis, and you should be able

check out your contacts at: http://ve7tcp.ampr.org/cgi-bin/dl7io
QSL direct to DL7VRO, Fritz Bergner, Sterndamm 199, D-12378 Berlin, Germany, or the preferred way, which is via Bureau. Bureau requests can also be obtained by sending an E-mail message to Fritz's InterNet address: dl7vro@aol.com

QSL INFO AND NEWS......
QSLs for the TU3F special callsign must be sent to F6AXP. This is for all QSOs made on CW/SSB/RTTY by the TU3F Team during the period of November 23rd through December 3rd.

Ron, AC7DX, was announced as QSL Manager for the 1998/99 SSIDXG Bouvet (3Y) operation.

QSLs for VK9LX go to Nick, VK2ICV. PLEASE NOTE: Nick's address is NOT correct in callbooks before 1998 !!!!!! So PLEASE QSL Via: Nick Hacko, PO BOX 730, Parramatta 2124 NSW, Australia. The VK9LX operation made 500 QSOs on 160 meters and a total of 13000+ QSOs on all bands. OPDX InterNet Subscribers will receive an additional bulletin containing the "VK9LX Summary" by K8RF.

On November 9th, the South African Radio League launched a WEB site at: http://www.sarl.org.za. This WEB site has the "Southern African Call Book" online. The callbook contains entries for South Africa (ZS), Lesotho (7P), Swaziland (3DA), Namibia (V5), Botswana (A22), Mozambique (C9), Tanzania (5H), Zambia (9J2) and Zimbabwe (Z2). The direct URL address is: http://www.sarl.org.za/callbook.htm

QSLs for TF3IRA. There seems to be some confusion on where to QSL this station. The correct method for QSLing TF3IRA is directly VIA THE CALL BOOK ADDRESS (and NOT, repeat not N4GN). You may also QSL via the bureau if you wish. TF3IRA is the club call for the Iceland IARU society. Eventhough Tim, N4GN, was active during last week's contest from the TF bureau, which just happens to be located in the very same room as the Iceland IARU station, he is not the QSL Manager. However, Tim, N4GN, is handling his own cards from the TF/OH4GN operation. Please send those cards to Tim's address in the U.S. at: 8309 Dawson Hill Road, Louisville, KY 40299-5317, U.S.A.), or via the bureau.

Tim, N4GN, reports that the OJ0/N4GN and OH0/N4GN cards are not yet out. He states, "If I ever get back to Kentucky, I'll get that done. I'm still hoping for some time over the holidays. Tnx for your patience."

QSLs for ZB2X during the CQWW CW Contest go to OH2KI: Jorma Saloranta, Karhutie 39, 00800 Helsinki, Finland.

Roger, G3SXW, would like to remind everyone about the QSL route for 5V7A which was active in the 1997 CQ WW CW contest. QSL via GM4FDM. NOT via G3SXW and NOT via GM4AGL (who are doing the 5V7A 1996 contacts). A flood of cards are already arriving at these two addresses and need to be forwarded to GM4FDM. Send only direct to:

Tom Wylie, GM4FDM, 3 King's Crescent, Elderslie, Renfrewshire,
PA5 9AD, Scotland. Requests for bureau replies may be sent to Tom
by E-mail at: wylie@sol.co.uk -- Already Tom has received over 100
such E-mail requests. More are encouraged. QSL cards are being
printed this week and direct replies will start to flow by December
15th.

Heinz, DL7RAG, states he has been receiving a lot of direct QSL
cards for ZF2RA (from CQWW DX CW 97 Contest). He reports that he
is NOT the QSL Manager for ZF2RA. Please QSL ZF2RA via K7AR. Heinz
is the QSL Manager for: 5W0HW, ZK1RAG, ZK2RA, 3D2/DL7RAG, DL7RAG/SV9.
He also mentions that you don't have to send a card, he automatically
sends a QSL for every contact via the bureau.

VP5, TURKS & CAICOS ISLANDS. Randy/N0TG, Murry/WA4DAN, and Ronald/AA4VK
will all be operating as /VP5 from January 16-23rd. Emphasis will be on
CW with activity on all bands including WARC bands. All QSLs will be
via N0TG.

XQ0, SAN FELIX. John, CE0ZAM, will be active from this rare Chilean island
for about 20 days in 1998. Activity is planned to take place in April/May,
and he will use the callsign XQ0X. Operations will be CW/SSB on all bands.

Hi Gary, is it true that the total response from the survey was about 1% of ARRL members whose total membership is about 20% of US hams? If so, .01 times .2 equals 1/5 of 1% of US hams - sounds neglible to me considering the survey was weighted rather than random.

How true Amor, but it seems that it is becomming the only way to take care of certain problems in this country now, we have a political system that is totally corrupt and inept, a justice system that is dosen't work and is a joke in the eyes of the rest of the world, and a corporate business structure that is so full of greed as to be unbelievable. A sad statement of the direction America is headed.....sigh!!!

I have for sale 2 scanners:
They are both identical, both Brand New in Box.

Uniden 200xlt
200 Channels in 10 banks (20 channels per bank)
Backlit display
12 Bands includes Aircraft Receive and 800 MHZ
Both Brand New in Box Mint Condition!

$150.00 a piece plus shipping
Email me at penguin@thepentagon.com. If you are interested...

Yes, I can ... but I am reluctant to give "the enemy" $850 of my money
to use to lobby against my interests and what I believe are the best
interests of the future of ham radio.

Your suggestion that I become a life member of the ARRL and run for the
BOD is akin to suggesting that a black man would be well-served
by taking out a life membership in the KKK and running for Imperial Grand
Wizard ... either would be about equally likely to succeed in effecting any
meaningful change in the respective organization's policies and goals.

California does permit drivers with clean records and within certain age ranges to renew (once, I think) by mail ... but after that, you have to appear for the eye test and written test, you can't just keep renewing by mail forever like olde farte hams who forgot code when tubes were still in vogue and never learned how solid-state circuits work.

Why Hello! To all Larry?
What gave you the idea that "all" here are christians?
Larry for your information Pat Robertson hasn't christianized the world
yet (he never will) so to the ones that see the 25th of Dec as another
day, you owe an apology with the promise that you will respect others
that are not one of you.
C Thomas

Carl, I'm confused.................

I thot you were adamently opposed to code testing? But now I wonder if you are just against a code test if the speed tested is too fast for you?

Could you write a few hundred words of passionately chosen prose to clear this up for me?

Typical Christian arrogance, every one must join your circus, since you talk about clowns, look at your clergy.
One look will convince you, if you can look straight and understand what you see.

A.N.A.R.T.S. News Bulletin 987 30TH NOVEMBER 1997 page 1

COLS COLUMN

WE ARE ALMOST AT THE END OF THE PART THAT COOKE AND WHEATSTONE
PLAYED IN EARLY COMMUNICATIONS.

THIS WEEK WE CONCENTRATE ON A DEVICE DESIGNED AND PATENTED BY
WHEATSTONE. COOKE THOUGHT HIS NEEDLE TELEGRAPH THE BEST
POSSIBLE FORM OF ELECTRICAL COMMUNICATION. BUT WHEATSTONE
THOUGHT IT WAS UNNECESSARY TO TRAIN OPERATORS TO USE THE
COMPLICATED CODE SYSTEM, MUCH MORE COMPLEX THAN MORSE CODE FOR
EXAMPLE.

HE SET ABOUT DESIGNING A DEVICE THAT LESS SKILLED OPERATORS
COULD USE AND CAME UP WITH AN 'ESCAPEMENT' INSTRUMENT THAT HE
CALLED THE 'ABC' TELEGRAPH. THIS TELEGRAPH HAD ELECTROMAGNETS
ACTUATED BY 'MANY TURNS OF FINE WIRE', AS HENRY HAD SUGGESTED
AND IT WAS POSSIBLE TO WORK THESE TELEGRAPHS AT LEAST OVER
SHORT DISTANCES.

THERE WERE MANY VERSIONS, ONE OF WHICH HAD A PAPER DISC
ROTATED BY A CLOCKWORK, THE ESCAPEMENT OF THIS CLOCKWORK WAS
CONTROLLED BY AN ELECTROMAGNET. THE ELECTROMAGNET WAS
TRIGGERED BY IMPULSES OF CURRENT FROM LINE.

AT THE TRANSMIT END OF THE TELEGRAPH, ELECTRICAL IMPULSES WERE
SEND TO LINE BY MAKING AND BREAKING A BATTERY CIRCUIT BY MEANS

OF A DIALER, THE 'ABC' SENDER. THIS ABC SENDER WHICH WAS PATENTED BY WHEATSTONE IN 1839, ANTICIPATED VERY CLOSELY THE 20TH CENTURY AUTOMATIC TELEPHONE DIAL. A METAL DISC, SET ON A SPINDLE, WAS ENGRAVED ON ON THE EDGE WITH THE ALPHABET, EXCEPT FOR Q, X, AND U. THE DISC WAS FITTED WITH SPOKES, IN BETWEEN EACH WAS ENGRAVED A LETTER. THE SPACE BETWEEN EACH SPOKE SERVED AS FINGER HOLES.

THE DISC WAS ROTATED BY THE SEND OPERATOR AS FAR AS A FIXED STOP, AGAIN JUST LIKE THE MODERN DIALER. PAIRS OF CONTACTS BEHIND THE DIAL WERE MADE AND BROKEN FOR EACH LETTER AS IT PASSED THE FIXED STOP, AGAIN LIKE A MODERN TELEPHONE. THE ELECTRICAL IMPULSES WERE THUS FED TO THE LINE AND ACTUATED THE CLOCKWORK DRIVEN RECEIVER.

IN TODAYS MODERN PHONES, WHEATSTONES RECEIVER WAS REPLACED BY A UNISELECTOR, STILL IN USE UNTIL RECENT TIMES. IF THERE ARE SOME STILL IN USE PLEASE FEEL FREE TO LET US ALL KNOW.

THE 'ABC' TELEGRAPH WERE SLOWER THAN THE 'NEEDLE' TYPE BUT WERE MORE RELIABLE AND NEEDED NO KNOWLEDGE OF A 'CODE'. DESPITE THIS IT WAS SUPERSEDED BY THE NEEDLE TELEGRAPH ON THE BRITISH RAILWAYS DURING THE YEARS 1840 TO 1850. THE TELEGRAPH AT THIS TIME WAS PRACTICALLY ENTIRELY IN THE HANDS OF THE RAILWAYS COMPANIES AND WERE WORKED BY SKILLED OPERATORS. WHEATSTONE PERSISTED AND MADE MANY IMPROVEMENTS IN 1856 AND AFTER 1860, DIALER TELEGRAPHS WERE WIDELY USED ON PRIVATE CIRCUITS.

WHEATSTONE WAS A GREAT BELIEVER IN OPERATORS BEING ABLE TO USE THE TELEGRAPH IN A SIMPLE WAY. HE WENT FURTHER THAN THE 'ABC' TELEGRAPH AND PRODUCED A RECEIVING INSTRUMENT WHICH USED ROTATING TYPE. THE TYPE WAS PRESSED DOWN ONTO A MOVING STRIP OF PAPER BY THE ELECTRICAL IMPULSES. HE TOOK OUT BRITISH PATENT NUMBER 9022 IN 1841 FOR THIS MACHINE. THE SPEED WAS AGAIN SLOWER THAN THE NEEDLE TELEGRAPH AND THIS TELEGRAPH WAS NOT USED COMMERCIALLY.

HE MADE JUST TWO MODELS, ONE OF THESE IS IN THE SCIENCE MUSEUM, SOUTH KENSINGTON, LONDON AND THE OTHER IN THE ROYAL SCOTTISH MUSEUM EDINBURGH. I MENTION THIS JUST IN CASE YOU ARE MAKING AN OVERSEAS TRIP SOMETIME.

FINALLY THIS WEEK, IT IS INTERESTING TO NOTE THAT IN THE BRITISH POST OFFICE GREEN PAPER NUMBER 5, 1934, IT STATES THAT A WHEATSTONE 'ABC' INSTRUMENT WAS STILL IN USE IN A NORTH WALES POST OFFICE IN 1930.

THATS ALL FOR THIS WEEK, 73S DE COL VK2CTD...

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT 21-27 NOV

SUMMARY
Date 21 22 23 24 25 26 27
10cm 96 -- 100 103 102 108 111
A -- 34 52 6 3 4 (3 expected)
T 67 -- -9 -24 45 59 70

Solar was very low on 22 and 23 low on 21 and 25 nov, moderate moderate on 24 and 26 high on 27th. There was an M1 flare on 24 an M2 flare on 26 and an X2 flare on 27th.

Geomagnetic activity at Learmonth (W.A.) was quiet 21st, 25th to 27th; unsettled to active on 24th; mainly unsettled to active, with a major storm 1200 to 1500 UT on 23rd. There was no data for 22nd.

Maximum useable frequencies were mostly near predicted monthly values 21st and 27th; depressed 15 to 30 per cent after 1100 UT on 23rd, and depressed 20 to 40 per cent up to 1800 UT on 24th. Frequencies were enhanced to 40 per cent between 1600 to 2200 UT on 25th, with Spread F and blanketing Sporadic E during local night; and near predicted monthly values to slightly enhanced on 26th. No data was available for 22nd.

FORECAST 28 NOV - 04 DEC

SOLAR: MODERATE TO HIGH.

GEOMAGNETIC: QUIET TO UNSETTLED.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES.

Notes of Interest:

IVORY COAST, TU - Michel, F3KT, with two other French hams will be active from 24 Nov to 3 Dec, including the CQ WW CW DX contest (11/29-11/30), using the call TU3F. Outside that contest they will operate RTTY using equipment provided by TU2XP and TU5EX. WARC band operation is also planned. RTTY skeds can be made with TU5EX at TU5EX.CIV.AF AX25 network, or e-mail to tu5ex at globeaccess.net . QSL via F3KT.

LIBYA, 5A - Operation at 5A7A could commence as early as 23 Nov, and will continue until 3 Dec. Dieter, DL3KDV will be one of the RTTY operators, and will be using a Kenwood TS-690, a 700 watt amp and a 3El 20m beam up 30 meters. Controller will be a SCS PTC+ with WF1B RTTY Dxpedition software. 3 Laptop PC's will be in optical network configuration. RTTY operation will most likely be exlusively on 20m. QSL via bureau or direct to Dieter Voss DL3KDV, Friedrichsthal 21, D-51688 Wipperfuerth, Germany.

SOUTH SHETLANDS, HF - Stan, SP3BGD, will be the new operator at HF0POL, the Polish Antarctic Station, starting 1 Jan 1998. He plans to concentrate on RTTY and CW until Dec 1998. QSL either via bureau, or direct to SP3SUN, Piotr Miranski, ul. Rydza Smiglego 27/5, 65-610 Zielona Gora, Poland.

TOGO, 5V - N7MB/5V7MB will be QRV on RTTY several days prior to, and after the CQ WW CW DX contest. QSL to home CBA.

The VK2SG RTTY DX NOTES are distributed via the WinLink network, and are also available on the Internet at reflector digital-dx at st.rim.or.jp and the OH2BUA WebCluster at URL http://www.clinet.fi/(tilde)jukka/rtty.html

For next week's bulletin, send your bandpass and notes of interest to Bob, WB2CJL at W5KSI.(hash)NOLA.LA.USA.NA or e-mail to wb2cjl at juno.com .

73 and good hunting de Jules W2JGR at W5KSI.(hash)NOLA.LA.USA.NA

ARLD049 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, The 599Rpt, G4BUE and The Daily DX. Thanks to all.

ROTUMA ISLAND, 3D2. Look for 3D2AG/p to be active on 80 to 10 meters including the newer bands until early Jan 1998. QSL via 3D2AG.

CYPRUS, 5B. Look for UA9YAB, RA9JX, RA9JR, UA9MA, UN7FZ and UN7FW to be QRV as 5B4/homecalls from Nov 25 to early Dec. They will also participate in the CQ WW CW Contest as either P3A or H2A. QSL contest call via W3HNK. QSL all others to homecalls.

WESTERN MALAYSIA, 9M2. Don, G3OZF, will be QRV as 9M2/G3OZF from Pulau Pangkor, IOTA AS-072, from Nov 24 to Dec 2. Activity will be on 80 to 10 meters, with an emphasis on CW. He will also be active in the CQ WW CW Contest. QSL to home call.

MOLDOVA, ER. Slawa ER1LW is QRV on the weekends on the newer bands using CW and SSB. He has also been active on RTTY. QSL to home call.

MINAMI TORISHIMA. JD1. Ryoichi, JL1KFR, will be QRV from Nov 25 to Dec 15 as JL1KFR/JD1. He is here to work on the weather station, so operating time will be limited. Activity will be on 80 to 10 meters, using mainly CW around 0900 to 1100z. QSL to home call.

CRETE, SV9. Karl, DJ5IL, will be QRV as J49IL from Nov 25 to Dec 3 using CW and SSB on 40 to 10 meters. He will also participate in the CQ WW CW Contest. QSL to home call.

GABON, TR. Jean TR8XX is QRV on 160 mtrs around 0515z. QSL to home call.

ANTIGUA, V2. WA3WSJ and K3TEJ will be QRV as V26ED and V26KW, respectively, from Nov 25 to Dec 2. Activity will be on all HF bands, using CW and SSB. They will participate in the CQ WW CW Contest as V26KW. Amir, 4X6TT, is QRV now as V29TT. His length of stay is unknown. QSL to home calls.

NAMIBIA, V5. Frank, DL7UFS, is QRV as V5/DL7UFS from Swakopmund using mostly CW on 20, 15 and 10 meters. His length of stay is unknown. QSL to home call.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

Email address for the Broadcast Officer is : patl(at)conmusic.usyd.edu.au or patl(at)mail.users.usyd.edu.au

have earned that right. I bet they are for affirmative action, anti
Prop. 209, quota's giving away the earned previleges to those that did
not work for it.
I bet he voted for Senator Ted Kennedy.
Need I say more, this is what keep liberals in business,
Robbin Peter to Pay Paul, Take away my right that are earned,
and give them away free to someone that didn't work for them.

Hmm...

Shades of the Liberal Democrats.....

4614. AutoFAQ Sent to Over 7500 rec.radio.amateur.misc Posters

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-07 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <348a483f.0@newscene>
Source record: 184947

In September of 1996, I started discretely mailing an introductory letter to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

Here's a breakdown of recipient's reactions to the letter over the last 15 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

About two-dozen people strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; experiences in other newsgroups demonstrate it to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another two-dozen thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the letter attempts to get to the point as quickly as possible, but pragmatically is also optimized to minimize the amount of followup correspondence I have to engage in)

Another dozen insisted that they never posted to rec.radio.amateur.misc (all of them without exception did post, but it was from following up in another newsgroup to a cross-post, and not realizing what was on the Newsgroups line)

About three-dozen complimented me for posting it (which I appreciate)

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I got a few bounces, often from deliberately munged Reply-To: addresses to ward off "spam")
- they don't care

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial. Having primed the previous-poster database with over 7500 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly

reduced, and will get even smaller with time.

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the letter to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the letter, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc
X-Loop: pschleck@oasis.novia.net

Hello,

This E-mail message is automatically sent to every new poster or cross-poster (as of September 21, 1996) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). It should be sent once, and only once, to each unique E-mail address. As the subject says, this is a welcome message. The Internet amateur radio community welcomes you to the newsgroups, including rec.radio.amateur.misc, and welcomes your input, opinions, and constructive participation. To help make you feel welcome, experienced participants like myself have chosen to systematically inform you, as a new poster, about useful information resources and user tips to help you get the most out of these newsgroups. I hope that you will consider this message in that spirit.

* * *

1. The news.announce.newusers newsgroup, moderated by Mark Moraes, contains a number of very informative articles providing an overview of net-etiquette, suggested writing styles for electronic forums, and other various do's and don'ts concerning Internet culture. If the articles have expired at your site, you may also view them via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

ftp://rtfm.mit.edu/pub/usenet/news.answers/news/

2. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed as a WWW Page:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

3. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

4. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

5. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which, with the sole exception of rec.radio.amateur.boatanchors for vintage equipment, is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

6. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

7. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

8. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question. Note that it is (almost without exception) inappropriate to post your article to all (or even a significant subset of) rec.radio.amateur.* newsgroups. Please pick only the most relevant newsgroups (usually no more than 2 or 3), and post your article as a simultaneous cross-post (check your newsreader documentation) so that only one article is propagated, and the article is only shown once in a newsreader.

9. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

(Text of article adopted from Tom Boutell, World Wide Web FAQ Maintainer, with modifications.)

>> C Thomas
>

Wayne has been and still is a close personal friend. I was there in
the origional "73 Office" onEast 8th Street in Brooklyn NY (1959) when
he and his first wife Virginia (Londner-Green) were assembling the very
first issue of 73 -- by hand -- on the floor -- in their living room.

I also wrote the FM and repeater column (Looking West) for 73 from 1971
to 1994. That is longer than even Wayne himself wrote for 73 until
that date. Remember he took several years hiatus when he sold out to
IDG Publishing group.

That said, let me give my opinion. Wayne is truly a one of a kind in
ham radio. He was the penultimate protagonist that for years kept the

ARRL "toeing its mark" -- at a time when the ARRL needed ythat kind of a visible enemy to keep it from becomming domineering. Judging by the curreent direction of the League, he succeeded.

He was the penultimate "enemy" of the "bad guy," willing to risk all to call things as they were. Any of you remember his campaign against Richard B. Cooper and the Communications Attorney Service back in '78-'79 where he ran characitures odf Cooper dressed in a Nazi uniform? If not for Green and a few others, hams might have been evicted from most of the bands and Coopers "pay to play" masses might be there now.

Judging from his editorials the past two years, even now he seems to look at certain people/groups as enimies of ham radio -- for reasons known only to Wayne. His commentary aimed at bringing down the IARN/AARC combine formed by Glen Baxter K1MAN is an example of one of his latest campaigns.

If not for Wayne Green, the 12000 plus repeaters we enjoy worldwide might not exist. When all the other ham mags and the ARRL were "poo-poo'ing" FM and repeaters, Green devoted issue after issue after issue of 73 to the mode, and also published a separate "Repeater Update" newsletter. Green is the singular individual that made "FM repeater" a ham radio household word.

He did the same for computers, SSB, and other concepts. Along the way he made -- and lost -- millions of dollars. He also made lots of enemies -- some very vocal. So have many others who have seen a modicum of personal success.

In his prime, Wayne green was a ham radio and telecommunications visionry. But nobody remains that forever. His current writings indicate that he is grasping for a new challange, but there are few if any challanges to be had in ham radio. So he now writes about such esoteric subjects as cold fusion, alternative medicines, etc.

The problem I see is that these subjects are not what a radio amateur buys a ham radio magazine to read. Hams buy ham magazines to read about Amateur Radio. When a magazine stops delivering what its name implies, its readers wander off to other publications.

The questions really are: "Can 73 survive" and "is there another Wane Green on the horizon?"

To answer the first, I believe that 73 will be with us until there is no longer a Wayne Green. I believe that he will find ways to continue its publication even if it runs at a loss -- because I believe that 73 is what really keeps Wayne Green, W2NSD, alive. The two are inseparable. He proved that when to took 73 back from IDG rather than see IDG abandon it and take it out of publication.

As to wo might be the next Wayne Green? I think that there will ever be another Wayne Green. He is a on of a kind \.

But the person I believe who will rise to that type of prominence is the editor of CQ-VHF Magazine -- Rich Moseson W2VU. I have known Rich for the past 20 years. He is a very positive and dynamic young man and his editorial writings show that he understands the past and present "Amateur Radio;" the people in the service and what they as an American sub-community want for a future.

Rich is a lot different than Wayne. He will not follow in Green's footsteps, but will make his own mark on our hobby/service. He is a very "positive" person and that in itself will cause him to rival the accomplishments of Wayne and many others without ever trying.

Many have come to view CQ-VHF as the 73 of the 21st century. I agree and I berlieve that anology is correct.

de Bill Pasternak, WA6ITF

I purchased a subscription to RADIO FUN and one to 73; it was a combined offer. Well, "FUN" apparently went under, and I never received either magazine. I called to inquire and complain and was told twice that 73 was on its way for two years instead of one...blah blah... in any event no magazine ever came despite the fact that the company still has my money. Eventually I gave up.

Hi guys,

I am in the process of assembling a 10 Metre FM repeater to be located in
South-east Queensland (VK4 land).

The problem I am having is that very little information is available on
duplexer systems for single antenna repeater operation. Cavities are
totally out of the question due to their physical size. Is there a cheap
way to obtain reasonable isolation between transmitter and receiver ports,
without having to go to 2 separate antennas. The site does not have the
space for the vertical separation needed for the 100 Khz offset.

Please guys..... Someone out there must have the expertise in the
construction of 10 Metre repeater antenna systems.

Regards,

David VK4-TDT

The only reason I have not been sued for libel is because it is the truth,moron.Oris is on his last server and the feds are watching him like a hawk. He is off of negia because a group of hams were preparing to file a class action suit against negia,and because he was caught red-handed trying to hack into several servers. That is the TRUTH. If you cannot handle it too bad.Try posting with your call Oris the earthlink trick has worn thin.

Look idiot,unlike your pals Oris and Jerry Prestel who want to create havoc down here I sign ALL my posts. I don't put "Edward" like Oris and I don't put "Murray" when my name is George Arsiccs. The administrators of these groups and the people who read these groups are sick of this trash. Every post made through MSN or G-Net with a fake alias violates their user agreements and will result in you both being kicked off your servers AGAIN. As hard as it will be for you I would follow this advice:post with your own names like men,and stop your childish behavior. I am taking the high road,it seems you are not capable.

Bill <bill@no.net> sez:

>Just what do you think gives you that right? Another one of the current
>generation that thinks everthing is "their right".

Yeah,... so? Could just as easily point out that you're one of the
previous generations who thought less and less was "your right"
Thinking in "generational" terms (at least in the present) is pretty
damn stupid anyway.

WireHead Prime (wiredone@raccoon.com) wrote:
: Dave Booth wrote:
: > If you saw all the hate and discontent in the alt.radio.pirate against
: > the US gov you would understand why they are cracking down on you all.
:
: Ummmmm...since when is it illegal to hate or be discontented with the
: government? And in what way does hating the government or being discontented
: with it justify breaking down a guy's door, handcuffing him on the floor
: (pointing a gun at his pets and yelling, "freeze or I'll shoot" to be funny or
: something) and then taking away everything electronic that he owns?

It isn't illegal to be discontent with government, but the
government exists for its own gain, not for OUR benefit, therefore when we
are discontent, they have to move to stifle such unrest, THE VERY SAME WAY
THE KINGS OF OLD DID to put down dissention! We are living in a class
society, and the government is the RULING CLASS!

: And, if pirates are such evil criminals, why are they only RARELY charged
: with an actual crime? Most of the time their stuff gets taken under civil
: forfeiture laws but they never get tried in court for their alledged crimes.
: Sounds like they're guilty until proven innocent to me.

That's because it is NOT a crime to operate a radio transmitter
without a license. Stealing is a crime, murder is a crime, pirate radio
is merely a RULES VIOLATION!

: What's next? Maybe burn someone at the stake for having an 'evil eye'?
: Round up a bunch of minorities and put them in a camp?

That's what they are doing where I live Wirehead. A few years ago
a serial killer came into town and something like 9 black women were found
dead, laid out in various vacant lots and such. No investigation was
performed. I think you know why (predominantly white police force). The
state government here has started selling prisoners to out of state labor
camps, which is A VERY BAD SIGN! Before, it was less likely you would go
to prison because the prisons were overcrowded. Now with slave labor
camps, it is MORE LIKELY you will go to prison because the state gets a
big wad of cash for sending you there. NO incentive to be lenient at all!

: Do you have any idea how stupid you sound? You basically just said that
: people who oppose the government should be punished for it.

That's what he said. I can hear him marching in his jackboots
right now, hand held high, saying Heil Hitler! Death to all who are not

just like me! Death to all who don't THINK the way I do! Yea, I see it.

: You're completely out of your skull. Like I say, when the FCC pulls your
: allocations and auctions them off for commercial services don't come crying
: here. You won't get alot of sympathy.

They came for the Jews, but I did nothing for I wasn't a Jew.
Then they came for the handicapped, and I did nothing for I wasn't
handicapped, then they came for the minorities, then finally came for me!

The great and elderly anderson geezered on

>> I am still puzzled why Adell posted this snippet of false or
>> highly information.

What is false or highly information ???

The anderson rambles....

The US military has long advocated
advanced electronics, new methods, anything that gets the
job done quickly and efficiently to fulfill the prime mission.
For that reason, the use of morse code stopped a long time
ago. In the modern military, both FHSS and DSSS has been
used for years. The SINCGARS family of radios (FHSS) is
very standard in the USA, USMC, and USAF (ground-air
liason in USAF). Useable by ordinary enlisted personnel.
[the SIngle Channel Ground Air Radio System is entering
its 9th operational year in the US military]

I reply..
The news article (widely available for verification) was that there is a
faction of old timer soldier types who are resisting the increased use of
drone aircraft. The analogy, as finally gotten, was that the ARS is not
unique in its "old fartizm" and resistance to change

I previous stated...

>Stop yelling anderson, it's bad for you blood pressure, you old goat.
It
>has everything to do with the discussion. Figure it out for yourself.

At which time anderson mutters...

Unless Adell is trying for some obscure point (not apparent),

Does that mean that you understood the point?? I would hope so, or else
it would seem you were the only one who didn't

his combination of insecurity, radio illiteracy, and immaturity
is doing nothing but trying to start a Flame War.

Insecurity??? maybe. It comes from seeing life as continuing and not
reliving the past. Radio illiteracy, based on a geezers opinion, high
doubtful. Immaturity, well, you know what old people are always saying
about those younger. Obviously a sign of old timers jealousy.

He is not
good at Flame Warring, as witness his leave of absence for
a long time.

At which I respond....

Again, with the military references, you must have loved playing soldier.

Besides, I've been around the whole
time. Just never found anything you've blathered on worth paying much
attention to till now.

>> For that matter, where was Adell during the Gulf War of late
>> 1990/early 1991?
>
>I can, however, picture you, geezering back at the TV screaming, holy
>shit boys, we
>didn't do that in my days.. no sir rebob. we stormed the trenches,
>bayonets gleaming in the sunlight, screaming kill the kaiser. wow that
>must have been a scene.
>Personally, I was up late at night, putting thru personal phone patches
>to from the gulf to families here in Northern New Jersey as well as
>reading about it in the papers, I don't watch a great deal of TV. I
>leave that up the those such as anderson who find it increasingly hard
to
>move around as their bodies age steadily faster

Adell is most assuredly on a testosterone high here...for that
matter, he may have graduated from Testosterone High.

OOOOOOO owwwww you got me !!!!!! Actually More Science High, class of
72 to be exact. I was the chairman of the future fair in 1970, where we
tried to showcase what technology that was going to play a part in our
lives

anderson incorrectly assumes,,,,

As to "running phone patches for military members to their
families in New Jersey," one has to put that in the same
credence context as the fellow whose "special forces son
was sending intel reports back from Iraq via CW." In short,
both are deemed falsehoods.

I respond and politely correct his mistake...

Based on what?? Try AAR2NL in any Mars database. You should learn to
research a tad before letting you falsehoods slip out. I heard dentugrip
will help prevent that

anderson then tries to counter with his military background and
insight....

Has Adell ANY personal knowledge of military training,
methods, equipment, or doctrine?

I respond thusly...

NOPE, not personal. Only what I've read, although I was on the USS IOWA once when I was working in the Norfolk Naval Station on a project in conjunction with you of my clients at the time and I have visited Picitinny Aresnal from time to time. (at this time I'll say hello to all the lurkers out there...Hey Mark!!! How'm I doing???)

anderson then pulls a comment from his nether parts

One has to doubt it based
on his "analogies" to "military" adventures which seem to be
gleaned solely from old movies of "war."

Hmmm military adventures?? I don't seem to recall mentioning any as there are none except in the vodka soaked brain cells of your self admitted fat head

I do however, love movies of war. I think the best was probably The Lognest Day,
followed by The Battle of the Bulge. The later 60's and early 70's had a few but those 2 are probably my favorites. Saw then both on the big screen when they first came out I will admit, In Harm's Way and Sink the Bismark are probably my favorite WWII movies (both of which so morse code being utilized), great action scenes, but They were Expendabel is a close second

But I guess nothing will be the war stories you could tell. Clerks going off in your face, staples and paper clips flying everywhere...Medi MEDIC...over here, anderson screams...my buddy, he's been hit...he's been hit..My god, exclaims the medic, a paper cut on his finger......yes sir thems' action packed adventures

Was Adell at Fort
Irwin (Desert Warfare Training Center) in 1989?

Nope, don;t even know where that is. were you???

Has he worn
cammies of any environment, the kevlar "fritz" helmet, or eaten
those wonderful MREs? In 100+ F of daytime right into 15 F of
nighttime?

Nope, except the MRE's. Got hold of a bunch for my son's scout troop. They were OK but nothing to write home about, kids hated them. In fact the suggestion was made that warring factions be forced to live on them. Probably never be any more wards if that were the case

. Boy, I'll bet you were
really mad when they got rid of those old steel pots. Probably screamed about unnecessary changes and ranted about the good ol days back when you where stationed in those front lines on the Ginza in Tokyo. Can just picture the young lennie, bathin and a shaving from in the liner.

The use of and information on higher tech military radio
hardware can be useful in looking towards the future of amateur
radio. Much of that information, including good use of HF
communications is open to the public through the US GPO and
US government websites.

I won't even argue with you here, in fact (gasP), I might have to agree

Such has been suggested to all
before...but many whose sole information input is League
publications or the daily newspaper just aren't up to speed.

Gee was that a crack?? You just labelled a whole lotta people besides
me. But to be honest, I don't live and breath everything military. I
leave that up to the pathetic souls that try a relive lives long passed
by

As one example, telecommanded drones with TV have been
used for years as spotters for USN battleships...yet some
"news" person thinks it is "something new."

Yep, last cited case was the early 80's during the siege of Beruit.
Weren't used during WWII, Korea or Vietnam.

The infighting reported came from the Pentagon itself. It's highly
doubtful you even saw the article, let alone tried to verify the facts.
To busy growing old in your own time

The faction wanting cited the increased costs and risk to pilots as they
over fly increasingly hostile areas

anderson begins his summation by....

This writer will overlook Adell's immature "wanna fight" comment
about "age and debilitation."
Since he did not make good on his
1996 "threat" to visit here, he is simply classified as all mouth and
nothing else.

I rebut..

First, I never invite the old or infirm to fight. I also don't invite the
mentally challenged as well. Seems you fit all 3 categories so no rumble
in the jungle for you

Actually I did visit Lennie. I was met at the airport, met with the
attorneys for the company buying me out, signed a bunch of papers rec'd a
number of checks and was back out flying to Park City, Utah for skiing
within
45 minutes. Did not even spend any time in town, saw no need to
sightsee, although
I am sure I did utilize the lavatory as we flew over you home.

>The article was published in light of the increased risks being
>taken to overfly Iraq with U2 missions

anderson first states the obvious then misses the point altogether...

The U2 is over 40 years old as an aircraft design. It remains a
superb camera platform for intel work. It's still a puzzlement
why a discussion of drones or U2s has a place in a newsgroup
supposed to be about amateur radio policy.

I forgot, we're suppose to clear all postings with you. Forgive oh great
and powerful oldster I'd repeat it anderson., but its obvious you
increased brain cells do not allow messages to pass to the necessary
brain centers

>The analogy, since you do so love them was that it's not only amateurs
>that are resistant to change. It was, however, obviously lost on
someone
>of your advanced age and decreased eyesight.

Enlighten us, Stevie Wondrous of age 44 and (supposedly)
good eyesight. WHY should radio amateurs be resistant to
change? Give us the benefit of your profundity.

I've never said the amateurs should be resistant to change and I defy you
to find one posting where I have stated otherwise. I personally have
utilized technology as it becomes available, provided it is cost
efficient and has purpose

>Learn to read better

Learn to write beyond 11th Grade teener level...you are in
your 40s and supposedly have been an adult for two decades.

ooohhhhhhh owwwww got me again. Actually, I've been considered an adult
since June 4, 1967. Anyway, I'd write like you, but I've learned to
communicate my thoughts in a concise manner, as opposed to your rambling
on and on.

>> So say me, the great and smarmy Lennie Anderson (of lennie and the
>squigtones fame)
>--
>Steve KF2TI
>KF2TI@planet.net
>http://www.planet.net/adell

This ending comment is an open invitation to a Flame War.

Just my opinion anderson. Are you suggesting that I am not allowed to
express my opinion of what is written?? How fascist of you.

It
has no place even when misspelling names.

Did I spell squigtones wrong again??

It is immature and
ludicrous. It is insecure in that Adell cannot stand being
corrected...even though the correction could have come from

any of several public sources for several years.

Please cite the sources As far as corrections, I've seen you corrected
on numerous occasions
by Carl and Gary (who expertise I do accept, despite all that's been said
and typed) and YOU won;t admit your errors, so I'd suggest you reread
your statement into a mirror and see what shines back

Len Anderson
Old soldiers never die, they geezer on and on like Len Andesron

> overmodualtion, and carving out a channel in the airwaves for you to DX on,
> but the fees should be like $25 flat. That's it. But some of these fees or
> overwhelming.

WOW! $25 is dirt cheap compared to other licensing fees like tavern license fees are $500 per year in Wisconsin, ummm same with dictates of the local government here telling us we no longer can have a septic tank for sewer and we MUST connect to sewer...thus since the demands of the city of Muskego dictates to all the people living in the Lake 101.5 FM listening area have to pay on there own expense to connect to the city sewer system plus also pay for the $500 construction permits to dig a trench to run a pipe from the house to the road, etc....

lesse.... umm radio stations wanting to play music thus have to have a license with BMI/ASCAP, etc that's at least a minimum of $500 annually for each music company. Ummm... WOW! people have to pay through the noise for everything.

Where does all that money go???? apparently someone must be pocketing it.

If Class-D ever comes back, or some sort of licensing for micro-broadcasters (which is just a dream....there won't never be any licensing of low power radio anyways) I doubt a license will cost $25...more like $2500... but anyways if they ever change the laws to allow for low power "Microbroadcasting", transmitters like Panaxis, Veronicas, Ramseys, etc... will still be considered illegal to use because they're not FCC accepted type equipment. LPB, Inc. sells certified FCC type accepted Low Power transmitters, but they are not cheap at all.

If I could set up a Licensed Low Power radio station, I would then feel comfortable about advertising the station and sell commercial time on my station to cover the costs of licensing fees, equipment, etc... and make some money on the long run.

But, that's all a dream.... it won't happen.... FCC isn't gonna bow down to allowing microbroadcasting because I see from what I read in some of these messages in this newsgroup would not impress the FCC to allow issueing licenses to Low Power broadcasters.

6.1.7.5. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

# sccstat /dev/scc0

you will displayed a very large amount of information relating to the
configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration
after you have booted. Its syntax is very similar to the NOS param
command, so to set the txtail setting of a device to 100mS you would
use:

# sccparam /dev/scc0 txtail 0x8

6.1.8. Creating a BPQ ethernet device.

Kernel Compile Options:

General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BPQ Ethernet driver for AX.25

Linux supports BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is
associated with the `eth0' device, the `bpq1' device with the `eth1'
```

device etc.

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card and tested that
this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more
information on how to do this.

To configure the BPQ support you need to configure the Ethernet device
with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry
in the /etc/ax25/axports file that you wish to use for this port.

6.1.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore be modifified to look similar to this:

LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

6.2. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a
text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you
create. Create one entry for each AX.25 device you want to use, this
includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry
here will describe exactly one AX.25 network device. The entries in
this file are associated with the network devices by the
callsign/ssid. This is at least one good reason for requiring unique
callsign/ssid.

6.3. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific
hosts. This is useful for both normal AX.25 connections and also IP
based connections. The axparms command enables you to do this. Again,
the man page offers a complete description, but a simple example might
be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the
AX.25 port named radio.

7. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you
have KISS interfaces then there are two methods for configuring an IP
address. The kissattach command has an option that allows you to do
specify an IP address. The more conventional method using the ifconfig
command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

```
# /sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
# /sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom. You can configure multiple NetRom ports, each with its own callsign and alias, the same procedure applies for each.

8.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use. Note, this is not that address that users should connect to to get access to a node style interface. (The node program is covered later). This callsign/ssid should be unique and should not appear elsewhere in either of the /etc/ax25/axports or the /etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

8.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may contain a number of entries. There would normally be one entry for each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If you do not have an entry in /etc/ax25/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

8.3. Creating the NetRom Network device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command. The nrattach works
in just the same way as the axattach command except that it creates
NetRom network devices called `nr[0-9]'. Again, the first time you use
the nrattach command it creates the `nr0' device, the second time it
creates the `nr1' network devices etc. To create the network device
for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /etc/ax25/nrports file.

8.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but
does not manage some functions. The NetRom daemon manages the NetRom
routing tables and generates the NetRom routing broadcasts. You start
NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that
it is started automatically each time you reboot.

8.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts.
The nrparms command enables you to do this. Again, the man page offers
a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a
neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms
command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a quality of 120 and this will be locked and will not be deleted automatically.

9. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to configuring an AX.25 interface for TCP/IP.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# /usr/sbin/nrattach netrom
# ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want. You can create multiple Rose ports if you wish, the same procedure applies for each.

10.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the
/etc/ax25/rsports file. This file describes the Rose port in much the
same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050294760 Rose Port

Note that Rose will use the default callsign/ssid configured on each
AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you
use the rsparms command as follows:

/usr/sbin/rsprams -call VK2KTJ-10

This example would make Linux listen for and use the callsign/ssid
VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

10.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command. The rsattach command creates
network devices named `rose[0-5]'. The first time you use the rsattach
command it create the `rose0' device, the second time it creates the
`rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the
details specified in the /etc/ax25/rsports file for the entry named
`rose'.

10.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named `radio' in your /etc/ax25/axports file to a neighbour with the call-sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

```
# rsparms -nodes add 5050295502/4 radio vk2xlz
```

which would be identical to the previous example except that it would match any destination address that matched the first four digits supplied, in this case any address commencing with the digits 5050. An alternate form for this command is:

```
# rsparms -nodes add 5050/4 radio vk2xlz
```

which is probably the less ambiguous form.

11. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

```
/usr/bin/call radio VK2DAY via VK2SUT
```

A simple NetRom call to a node with an alias of SUNBBS would look like:

```
/usr/bin/call netrom SUNBBS
```

A simple Rose call to HEARD at node 5050882960 would look like:

```
/usr/bin/call rose HEARD 5050882960
```

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

12. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they

connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

12.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
...
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports files. The name of the port is surrounded by the `[]' brackets if it is an AX.25 port, the `<>' brackets if it is a NetRom port, or the `{}' brackets if it is a Rose port. There is an alternate form for this field, and that is use prefix the port name with `callsign/ssid via' to indicate that you wish accept calls to the callsign/ssid via this interface. The example

should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.

%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not

matching any specific rule will be disconnected immediately without notice.

The `parameters' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `parameters' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any using the `parameters' entry. The trap is that the these defaults apply only to those rules below the `parameters' line, not to those above. You may have more than one `parameters' rule per interface definition, and in this way you may create groups of default configurations. It is important to note that the `parameters' rule does not allow you to set the `uid' or `command' fields.

12.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * *
VK2XLZ * * * * * * * root /usr/sbin/axspawn axspawn %u +
VK2DAY * * * * * * * root /usr/sbin/axspawn axspawn %u +
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * *
VK2XLZ * * * * * * * root /usr/sbin/axspawn axspawn %u +
VK2DAY * * * * * * * root /usr/sbin/axspawn axspawn %u +
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign `VK2KTJ-0' heard on the AX.25 port called `radio' will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note the use of mode `L'.

The parameters line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/sbin/axspawn program for them. Any copies of /usr/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines provide definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

12.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

13. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily

configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by running it from the command line.

13.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.

13.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ ------------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
```

inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users to enter a password when they connect. This might be useful to help protect specially configured users who have high authority levels. If the fourth field is set then its value will be the password that will be accepted.

permissions
The permissions field is the final field in each entry in the file. The permissions field is coded as a bit field, with each facility having a bit value which if set allows the option to be used and if not set prevents the facility being used. The list of controllable facilities and their corresponding bit values are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.

To code the permissions value for a rule, simply take each of the permissions you want that user to have and add their values together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
```

```
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
* host * * 159
* ampr * * 159
```

13.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

13.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 3694/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con

nected to the node.

14. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
```

```
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.
```

15. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

15.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

15.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

15.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

15.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

```
default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj
```

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

15.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

```
# /usr/sbin/pms -u vk2ktj -o vk2ktj
```

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

16. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu&#65533;
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. The `netrom_call' and `rose_call' utilities work in similar ways. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

17. Configuring the Rose Uplink and Downlink commands

If you are familiar with the ROM based Rose implementation you will be familiar with the method by which AX.25 users make calls across a Rose network. If a users local Rose node has the callsign VK2KTJ-5 and the AX.25 user wants to connect to VK5XXX at remote Rose node 5050882960 then they would issue the command:

```
c vk5xxx v vk2ktj-5 5050 882960
```

At the remote node, VK5XXX would see an incoming connection with the local AX.25 users callsign and being digipeated via the remote Rose

nodes callsign.

The Linux Rose implementation does not support this capability in the kernel, but there are two application programs called rsuplnk and rsdwnlnk which perform this function.

17.1. Configuring a Rose downlink

To configure your Linux machine to accept a Rose connection and establish an AX.25 connection to any destination callsign that is not being listened for on your machine you need to add an entry to your /etc/ax25/ax25d.conf file. Normally you would configure this entry to be the default behaviour for incoming Rose connections. For example you might have Rose listeners operating for destinations like NODE-0 or HEARD-0 that you wish to handle locally, but for all other destination calls you may want to pass them to the rsdwnlink command and assume they are AX.25 users.

A typical configuration would look like:

```
#
{* via rose}
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsdwnlnk rsdwnlnk 4800 vk2ktj-5
#
```

With this configuration any user who established a Rose connection to your Linux nodes address with a destination call of something that you were not specifically listening for would be converted into an AX.25 connection on the AX.25 port named 4800 with a digipeater path of VK2KTJ-5.

17.2. Configuring a Rose uplink

To configure your Linux machine to accept AX.25 connections in the same way that a ROM Rose node would you must add an entry into your /etc/ax25/ax25d.conf file that looks similar to the following:

```
#
[VK2KTJ-5* via 4800]
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsuplnk rsuplnk rose
#
```

Note the special syntax for the local callsign. The `*' character indicates that the application should be invoked if the callsign is heard in the digipeater path of a connection.

This configuration would allow an AX.25 user to establish Rose calls using the example connect sequence presented in the introduction. Anybody attempting to digipeat via VK2KTJ-5 on the AX.25 port named 4800 would be handled by the rsuplnk command.

18. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure you don't miss it.

You make the association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

19. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be

listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the
NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom
software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening
for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

/proc/net/rose_routes
contains a list of all established Rose connections.

20. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based
implementations of the amateur packet radio protocols is the ease with
which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of
this document I will describe the elementary details of how you can
make use of the AX.25, NetRom and Rose protocols within your software.

20.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to
programming for TCP/IP under Linux. The major differences being the
address families used, and the address structures that need to be
mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25,
AF_NETROM and AF_ROSE respectively.

20.2. The header files.

You must always include the `ax25.h' header file, and also the
`netrom.h' or `rose.h' header files if you are dealing with those
protocols. Simple top level skeletons would look something like the
following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
```

```
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

20.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that ninety percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

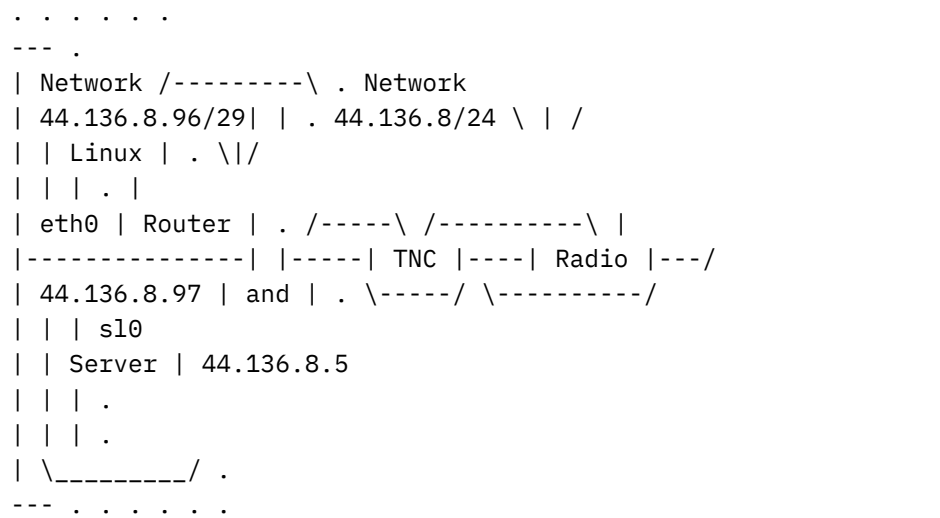
The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

21. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

21.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
kissattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/etc/ax25/axports
```

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

- --- BEGIN Linux AX25 HOWTO part 3/3 ---

21.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/
| 154.27.3.20 | Gateway | . \-----/ \----------/
| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#

```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"

```

21.3. AXIP encapsulated gateway configuration

Many Amateur Radio Internet gateways encapsulate AX.25, NetRom and Rose in addition to tcp/ip. Encapsulation of AX.25 frames within IP datagrams is described in RFC-1226 by Brian Kantor. Mike Westerhof wrote an implementation of an AX.25 encapsulation daemon for unix in 1991. The ax25-utils package includes a marginally enhanced version of it for Linux.

An AXIP encapsulation program accepts AX.25 frames at one end, looks at the destination AX.25 address to determine what IP address to send them to, encapsulates them in a tcp/ip datagram and then transmits them to the appropriate remote destination. It also accepts tcp/ip datagrams that contain AX.25 frames, unwraps them and processes them as if it had received them directly from an AX.25 port. To distinguish IP datagrams containing AX.25 frames from other IP datagrams which don't, AXIP datagrams are coded with a protocol id of 4 (or 94 which is now deprecated). This process is described in RFC-1226.

The ax25ipd program included in the ax25-utils package presents itself as a program supporting a KISS interface across which you pass AX.25 frames, and an interface into the tcp/ip protocols. It is configured with a single configuration file called /etc/ax25/ax25ipd.conf.

21.3.1. AXIP configuration options.

The ax25ipd program has two major modes of operation. "digipeater" mode and "tnc" mode. In "tnc" mode the daemon is treated as though it were a kiss TNC, you pass KISS encapsulated frames to it and it will transmit them, this is the usual configuration. In "digipeater" mode, you treat the daemon as though it were an AX.25 digipeater. There are subtle differences between these modes.

In the configuration file you configure "routes" or mappings between destination AX.25 callsigns and the IP addresses of the hosts that you want to send the AX.25 packets too. Each route has options which will be explained later.
Other options that are configured here are

the tty that the ax25ipd daemon will open and its speed (usually one end of a pipe)

what callsign you want to use in "digipeater" mode

beacon interval and text

whether you want to encapsulate the AX.25 frames in IP datagrams or in UDP/IP datagrams. Nearly all AXIP gateways use IP encapsulation, but some gateways are behind firewalls that will not allow IP with the

AXIP protocol id to pass and are forced to use UDP/IP. Whatever you choose must match what the tcp/ip host at the other end of the link is using.

21.3.2. A typical /etc/ax25/ax25ipd.conf file.

```
#
# ax25ipd configuration file for station floyd.vk5xxx.ampr.org
#
# Select axip transport. 'ip' is what you want for compatibility
# with most other gateways.
#
socket ip
#
# Set ax25ipd mode of operation. (digi or tnc)
#
mode tnc
#
# If you selected digi, you must define a callsign. If you selected
# tnc mode, the callsign is currently optional, but this may change
# in the future! (2 calls if using dual port kiss)
#
#mycall vk5xxx-4
#mycall2 vk5xxx-5
#
# In digi mode, you may use an alias. (2 for dual port)
#
#myalias svwdns
#myalias2 svwdn2
#
# Send an ident every 540 seconds ...
#
#beacon after 540
#btext ax25ip -- tncmode rob/vk5xxx -- Experimental AXIP gateway
#
# Serial port, or pipe connected to a kissattach in my case
#
device /dev/ttyq0
#
# Set the device speed
#
speed 9600
#
# loglevel 0 - no output
# loglevel 1 - config info only
# loglevel 2 - major events and errors
# loglevel 3 - major events, errors, and AX25 frame trace
# loglevel 4 - all events
# log 0 for the moment, syslog not working yet ...
#
loglevel 2
```

```
#
# If we are in digi mode, we might have a real tnc here, so use param to
# set the tnc parameters ...
#
#param 1 20
#
# Broadcast Address definition. Any of the addresses listed will be forwarded
# to any of the routes flagged as broadcast capable routes.
#
broadcast QST-0 NODES-0
#
# ax.25 route definition, define as many as you need.
# format is route (call/wildcard) (ip host at destination)
# ssid of 0 routes all ssid's
#
# route <destcall> <destaddr> [flags]
#
# Valid flags are:
# b - allow broadcasts to be transmitted via this route
# d - this route is the default route
#
route vk2sut-0 44.136.8.68 b
route vk5xxx 44.136.188.221 b
route vk2abc 44.1.1.1
#
#
```

21.3.3. Running ax25ipd

Create your /etc/ax25/axports entry:

```
# /etc/ax25/axports
#
axip VK2KTJ-13 9600 256 AXIP port
#
```

Run the kissattach command to create that port:

```
/usr/sbin/kissattach /dev/ptyq0 axip
```

Run the ax25ipd program:

```
/usr/sbin/ax25ipd &
```

Test the AXIP link:

```
call axip vk5xxx
```

21.3.4. Some notes about the routes and route flags

The "route" command is where you specify where you want your AX.25 packets encapsulated and sent to. When the ax25ipd daemon receives a packet from its interface, it compares the destination callsign with each of the callsigns in its routing table. If if finds a match then

the ax.25 packet is encapsulated in an IP datagram and then transmitted to the host at the specified IP address.

There are two flags you can add to any of the route commands in the ax25ipd.conf file. The two flags are:

b traffic with a destination address matching any of those on the list defined by the "broadcast" keyword should be transmitted via this route.

d any packets not matching any route should be transmitted via this route.

The broadcast flag is very useful, as it enables informations that is normally destined for all stations to a number of AXIP destinations. Normally axip routes are point-to-point and unable to handle 'broadcast' packets.

21.4. Linking NOS and Linux using a pipe device

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users via NOS.

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyq[1-f] and the slave end of the pipes are known as: ttyq[1-f]. Remember they come in pairs, so if you select /dev/ptyqf as your master end then you must use /dev/ttyqf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptyqf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttyqf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

22. Where do I find more information about .... ?

Since this document assumes you already have some experience with
packet radio and that this might not be the case I've collected a set
of references to other information that you might find useful.

22.1. Packet Radio

You can get general information about Packet Radio from these sites:

American Radio Relay League <http://www.arrl.org/>,

Radio Amateur Teleprinter Society <http://www.rats.org/>

Tucson Amateur Packet Radio Group <http://www.tapr.org/>

22.2. Protocol Documentation

AX.25, NetRom - Jonathon Naylor has collated a variety of documents that relate to the packet radio protocols themselves. This documentation has been packaged up into ax25-doc-1.0.tar.gz <ftp://ftp.pspt.fi/pub/ham/linux/ax25/ax25-doc-1.0.tar.gz>

22.3. Hardware Documentation

Information on the PI2 Card is provided by the Ottawa Packet Radio Group <http://hydra.carleton.ca/>.

Information on Baycom hardware is available at the Baycom Web Page <http://www.baycom.de/>.

23. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

24. Acknowledgements.

The following people have contributed to this document in one way or another, knowingly or unknowingly. In no particular order (as I find them): Jonathon Naylor, Thomas Sailer, Joerg Reuter, Ron Atkinson, Alan Cox, Craig Small, John Tanner, Brandon Allbery, Hans Alblas, Klaus Kudielka, Carl Makin.

25. Copyright.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet. It is a suite of tools for
circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at
www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed
from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so he can use it on his laptop while working VHF contests. He is also writing it as an excuse to learn ncurses programming. His goal is a general purpose contest logger that a user can specify new contests in as they come about. It supports all bands and modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page
<ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip
```

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document
appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-
HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the
following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com
<http://www.hboc.com/linux/index.html> and www.lan.com
<http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-
personal.engin.umich.edu <http://www-
personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the
following two locations: wheel.dcn.davis.ca
<http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and
fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in
Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at:
DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite
communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor
G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

You are correct that most of it comes from south of the border, which is
beyond our control, but more and more of the intrusion into 10 meters is
happening north of the border and we can do something about that.

Family tragedy requires we go from Oklahoma City to Fayetteville this week. I'd appreciate suggestions as to wide-area open 2-m repeaters along this route to keep us in touch as we go from one city to the other.

The ARRL book is about two years out of date. Frequencies, offsets, and PLs would be most appreciated. Leaving Wednesday (10 Dec) and need the data before then.

Many thanks for your help.

I've has an SB220 for about 25 years. It's a fine amplifier. Very rugged. Tolerates a reasonably high VSWR even at full power. I haven't kept up with the prices, but I'm surprised to hear that they fetch that much.

It would be a good idea to add filiment in-rush current protection. The stock arrangement exceeds Eimac's safe current rating, which will shorten the life of those very expensive tubes.

Regards,
WB4PLL

> I don't know where to start looking for this type of information.

You might want to begin by defining your requirement.

How far away does the signal need to be detected? How small must it be? What power source is available? Antenna? Do you have a frequency in mind? What other signals will be on the same frequency? What type of modulation will you use to destinguish your signal from others?

Do you have a direction finding receiving system already? If so, tell us about it; the transmitter will have to be compatible. If not, the receiving station is a much bigger job than a little beacon transmitter. Maybe that should be the focus of your question.

Have you thought about licensing requirements?

Regards,
Blake

Hi, Jim

I assume the Fayetteville is in North Carolina. If you're coming across the state on I-40 from Tennessee, tune into 145.19 as you cross the state line. It's on a 6000 foot mountain (Mt. Mitchell), the hightest east of the Mississippi, and will provide coverage and a lot of activity until you get to Winston Salem.

The next wide-coverage machine is on 145.25 (may need 88.5 pl), near Greensboro. The mountains are gone by here, so the 2000 foot tower is the best alternative. 146.76 is also pouplar in Greensboro.

You'll probably turn down US 421 from Greensboro, taking you through Sanford. 147.255 in Ashboro will cover that leg. Then, the 147.105 machine, listed as "Broadway", is just east of Sanford, at 1600 feet.

In Fayetteville itself, the CFARS (Cape Fear ARS) machine is the busiest, on 146.91, 100Hz PL. Another repeater is on 147.33.

Sorry about the circumstances for this trip, but I hope you can get in some good hamming along the way.

73,
Gary KN4AQ
Raleigh, NC

4651. QST on CD?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-08 00:00:00 UTC
From: keith@NOSPAMfc.hp.com
Message-ID: <66gt3b$ic0@fcnews.fc.hp.com>
Source record: 184828

Has anyone seen the QST magazines on CD? Apparently the ARRL has been putting 5 years of back issues on a CD (scanned as B/W only) along with a search engine for finding articles and a method for printing pages. There are about 5-6 CDs available now going back to the early 70's with more CDs for earlier years coming along.

Has anyone bought one of these CDs? What do you think of them?

My shrinking shelf space is crying for a solution and I wonder if this is the path to take.

These days, the Disney (or any other similar entity) would have
a tough time banning HTs with the proliferation of cell phones.
In my opinion, they'd have to ban ALL electronic communication
devices in order to just eliminate HT's.

Just my opinion.

Well boo hoo.

White christian conservative men have had a pretty good run what with killing most of the native Americans, using slave labor for a couple hundred years, raping and pillaging the landscape, sucking up most of the money so only their white christian conservative sons can get even wealthier. Takes money to make money dontcha know.

At any rate, if all it took was hard work (IE earning) to become wealthy and powerful, why are there more white collar criminals than blue collar millionaires?

> Prop. 209, quota's giving away the earned previleges to those that did
> not work for it.
> I bet he voted for Senator Ted Kennedy.
> Need I say more, this is what keep liberals in business,
> Robbin Peter to Pay Paul, Take away my right that are earned,
> and give them away free to someone that didn't work for them.

> Shades of the Liberal Democrats.....

Blah blah blah.

Liberal this democrat that. Earned this. Angry about that.

You're living on a few million square miles of land you didn't earn.
You're living off the fat of a couple hundred years of slave labor
that you didn't earn.
You're speaking freely due to rights that YOU didn't earn...but were
fought for by someone who didn't care if you were liberal or
conservative.

So pretty much...you've earned NOTHING that wasn't given to YOU by
someone else.

As for "liberals" (using the current definition of the term)...

Liberals didn't blow up a Federal building on Oklahoma City,
killing innocent women and children
Liberals didn't blow up and open fire at "abortion clinics"
at least attempting to murder innocent women, who may have been
there simply because they couldn't afford medical care or for

obstetric or other exams
Liberals didn't assassinate Abraham Lincoln, John F Kennedy,
Martin Luther King Jr or Malcolm X (Thou shalt not kill)
Charles Manson, Ted Bundy and countless other serial killers were
not Liberals
Liberals did not break into Democrat National HQ in order to
help Nixon illegally win a campaign
Liberals have fought right along with everyone else in every war
this country has ever fought
Liberals did not perpetrate a meaningless and unconstitutional
witch hunt against ALLEDGED communists, who under our constitution,
are guaranteed the right the hold whatever political or economic
views they choose anyway
The Heavensgate and other suicide cults were not Liberals

He who lives in a glass house should not throw stones. So before you
get that special feeling way down low by calling names, perhaps you
should look at your own worldview and the destruction and suffering it
has wrought, not to a few angry hams, but to MILLIONS all over the
globe.

You're pretty close to the mark in all you say, Cliff. The profits are large, but in many cases they haven't been plowed back into the physical plant except when it was absolutely unavoidable, or for automation to cut personnel. (Automation can be a useful tool when applied properly, but too many stations are using it as a way to eliminate their most skilled people, and that hurts the on air product.) Not promptly replacing obsolete equipment, and getting rid of the most highly skilled people, has had a deteriorating effect on quality. The few remaining engineers are running around frantically with bailing wire and bubble gum trying to keep the old gear going. And the few remaining production people are overloaded too. I could go on and on with long sob stories about this, but you've seen it first hand yourself.

A few stations are using the DTV mandate as an excuse to completely refurbish their plants, and pictures from them will be superb. But many others have decided to skimp by at the lowest possible cost with just a transcoder and a new transmitter. And the DTV pictures from those plants won't be pretty. Management of those stations is counting on people like those in this thread, who say that they don't care about quality pictures, to remain their viewers. Sadly, they may be right.

But anyone who has seen the quality possible with DTV is going to be very disappointed with a transcoded NTSC picture. Some people here have said that picture quality will be no better than DSS, but that's not true. DSS pictures are still converted back to NTSC to be viewed on the home set (and are still shot in NTSC too), and that still sucks. A direct DTV receiver can make even ATV resolution look great. And the HDTV pictures are marvels, as real as looking out a window. But that's only if the source material is treated properly, and that requires a fully digital plant.

Many broadcasters aren't going to spend the money to do that. So
the DTV pictures from them will suck nearly as badly as current NTSC
pictures. The only difference will be a virtual elimination of transmission
artifacts. That's significant, but it won't make the pictures look that much
better to those already getting a good signal. That marginal difference is
going to piss off a lot of viewers who will have spent a ton of money for
very little perceived improvement.

The few stations who are spending the big bucks to totally refurbish
their plants are betting that the audience will be able to tell the difference,
and that the audience will *care* about the difference. If the audience
doesn't care, they will be in big trouble. But if the audience *does* care,
they will reap the rewards of a much larger audience at the expense of
those who tried to skimp by on the cheap. (And that translates into
huge increases in ad revenue.)

I'm hoping the audience does care. The difference *is* really spectacular
when the system is all digital from the pickup sensor to the viewer's screen.
It is like the step up from b&w to color in the improvement in realism of the
pictures. And I think that ultimately the audience *will* care. Just as with
the step from b&w to color, the audience won't be satisfied with lower quality
once they've seen enough high quality video to have their expectations raised.

But there's another side to this. Again, just as with the step from b&w
to color, large changes have to be made in the way source material
is shot. If you try to shoot the same way for DTV as you do for NTSC,
the results are very disappointing because all the things which are
masked by NTSC suddenly become visible. New sets will be required,
new lighting techniques will be required, etc. The whole process has
to be approached differently. Shooting for TV is going to have to
become more like shooting for the movies (but still different). And
that's expensive and labor intensive to do right. I'm afraid many in the
industry haven't grasped that yet. The learning curve is going to be
steep, and I wonder if most managements will have the guts to
ride it to the top.

Some days I think those trying to skimp by on the cheap may have the
right idea. They can let others pay the costs of climbing the very steep
learning curve involved with DTV, and then do their upgrade when things
have matured and costs have come down. But that has a cost too in the
disappointment their audience will have in them until they do make the
jump. That could kill the business by souring the audience on DTV.
It is going to be an interesting decade.

$500.00 USD REWARD!

Calling all RF designers.

I am in need of single frequency FM transmitter with the following specifications:

1. single frequency within 87.9 and 107.9Mhz
2. minimum parts
3. radiated output less than 250uv at 3 meters
4. bandwidth less than 200khz with signal centered on operating frequency
5. non-stereo
6. line-level input
7. must be able to change operating frequency easily
8. operate on 9-12VDC
9. matched telescopic antenna
10. parts must be easily obtained without special orders
11. can not be previously copywrited (stolen) design

Will pay $500.00 USD for successful design and an additional $500.00 after full FCC certification. I will retain all rights of the design without further compensation of any kind.

email to Paul J. Marcianti

Source record: 184840

The '850 is a proven winner with some of the best transmitted audio around. Almost all of the functions are accessible directly without having to go to a menu.

The Icom is a neat rig as well. The '756 has dual receive, which is nice. The DSP is marginal. Early '756s had a few quality probs. IMO, the only real compelling reason to buy the '756 (over other Icoms) is the display, but that is enough to make it one of the most popular of the new rigs. I think it is better than the 736/8, but not as good as the 775 or even a used 765 or 761. You have fewer real mike options with Icom rigs because you can't get enough drive with anything but an Icom mike without modifying the radio or adding an outboard preamp circuit. (this assumes you want pileup-busting audio)

The 850 is the best radio Kenwood ever made, with the '940 running a close second. If you get the Digital Voice synthesizer and keyer for the 850 it is a great contest rig.

You have to decide what's important to you and go from there.

Cecil: I would HOPE that they do. First, the lifetime member dues are put into some sort of interest-bearing account, which funds each year's issues to the LM. I would HOPE that they do have great reserves which would help keep them going during times of huge drops in book sales and much lower advertising sales---like right now. Ham businesses are dropping like flies. Salaries at the League are nothing to write home about. Practically everyone there could make more elsewhere, but they feel they are making a contribution there. A better phrase should be not-for-profit. Because, non-profit means that you are outta there, even the non-profits.

A few stations may try that, but it won't bring them the same order of
magnitude of revenue that creating more advertising minutes by expanding
free programming will do. That's the heart and soul of the business. A
reporter once asked Willie Sutton why he robbed banks. He replied,
"That's where the money is." Sticking up convienence stores just
doesn't pay as well as hitting the places with the big bucks. And the
big bucks come from advertisers, not from retailing program delivery.

And note that HBO is primarily subscription TV, not pay per view.
Subscription TV's economics are addressed below.

>>Subscription TV has lower risk, higher volume, but still a fairly
>>low ROI. It is still retailing of programming, but more analogous
>>to K Mart or Walmart style retailing than is pay per view. Annual
>>ROI is on the order of 6%-10%, and "churn" still makes cost of
>>sales fairly burdensome.
>
>Right...try to tell that to Hughes Electronics. Those poor boys have

>only X million DTV customers sending it in piles.

And DSS is *still* losing money. Direct TV, Primestar, etc are still having to subsidize receiver sales in order to gain enough market penetration to start earning a ROI. They're hoping to turn the corner and get into the black in the next 5 years, but DTV may kill them yet. Or interactive two-way cable may get them. Their future is uncertain at best. (I think that they'll make it, but it is a gamble. Their competitors aren't standing still.) It took cable decades to get the penetration they needed to start generating a healthy ROI, and it is still less than that of the free over the air broadcaster.

>>But free advertiser supported TV is a horse of a different color.
>>The industry average annual ROI is 22%. The free broadcaster is

>you to buy the football game on 5C Saturday afternoon...wanna bet?

If so that would be very foolish indeed. You can't make money transferring money from one pocket to the other in the same pair of pants. And that's what you're doing when you buy advertising time from yourself. (You can only sell that minute once, and there are only so many minutes to sell, so every one of them better be bringing you a maximum return.) And the networks have contracts with the NFL and other major sporting organizations which lock them into free broadcasting until at least 2008. Cable and DSS tried to buy those rights, but they couldn't pay enough to get them because retailing of program delivery doesn't bring in the revenue stream that advertising does. ESPN and other pay players get the minor events, the crumbs leftover after the big mass audience draws have been gobbled up by the advertiser supported free TV networks.

>>The business of the free TV broadcaster is selling an audience
>>demographic to an advertiser. And advertisers are willing to pay
>>handsomely for that demographic. In prime time, advertisers pay
>>(collectively) an average of $32 per viewer per hour. And the
>>broadcaster incurs very little overhead cost of sales to get that
>>sort of revenue stream.
>
>Those advertisers will LOVE the new pay channels! EVERYONE will have

>town! He's gonna be grinnin from ear to ear!

If you say so. What's the current ROI on the Weather Channel? Do you know? Do you know what a local insertion spot goes for on the Weather Channel? I do. It's chicken feed. And the Weather Channel is a hot property

in the cable world. Realize that the few pay cable channels which are advertiser supported don't pass that money to the cable operator. They may throw him a local insertion crumb a couple of times an hour, but they don't share the ad revenues for their spots with him, they *charge* him to carry their programming. He has to make his ROI by retailing the programming to the viewer. Anyone attempting to duplicate what cable is doing over the air will be in the same situation.

Stations have already tried pay TV. It fell flat on its face. I don't know of any station still broadcasting pay TV. The ROI is much better with advertiser supported free TV, even if you're the 9th station in a market.

>>There are very few pay TV events which can command $32 an
>>hour from viewers, and no subscription TV services which can
>>command that sort of revenue. But it is the routine meat and
>>potatoes of the "free" broadcaster. He understands this business
>>very well, and knows where the large revenue streams live.

>SOBs and their crappy service are going to be in big trouble when the
>BIG GUNS who own Channel 5 decide they can distribute HBO better.
>Wanna bet HBO will think so, too?

Cable has a 95% penetration in the US. So you're talking about a marginal 5% audience increase if those who currently don't have access to cable are brought into the fold with your pay TV scheme. But the few rural customers you might gain are offset by those in apartment warrens who *still* won't be able to get off the air TV. No, I don't think HBO will think so. HBO has distribution by both cable and DSS already. It would dilute its product too thinly if it added DTV distribution. The other operators wouldn't stand for it, and HBO can't afford to walk away from them.

DTV will offer some alternatives to cable by offering more over the air virtual channels than broadcast offers today. But the number of channels will still be relatively limited, and the broadcaster will strive to maximize the revenue he can get from each of them. And that still means advertiser supported free TV. Willie Sutton knew his business, and so do broadcasters. Most people won't buy a cow if they can get milk for free.

In other words, you're trying to apply the pay cable model to DTV, but DTV is much more likely to use the proven successful free over the air broadcast model to eat into cable's domain. Think of it this way. If Walmart started charging you $5 at the door to come in and shop there, wouldn't you take your busines over to K Mart instead? That's why the free over the air broadcaster has the bigger audience, and advertisers are willing to pay big bucks to gain exposure to it. Lots

bigger bucks than the $5 a head would be netting Walmart.

You've got to realize why cable has prospered. Cable brought TV reception to people who couldn't get good off air reception. And cable brought more program choices to the viewer (for a fee) which over the air broadcast couldn't provide because there weren't enough allocated channels to go around. With DTV, fewer people will be unable to get good reception, and there will be more (free) program choices. That's going to hurt cable, but is unlikely to kill it, and certainly won't compete directly for its pay per view and subscription channels like HBO.

That's a different market niche than the one which brings large revenue streams to the over the air broadcaster. DSS is the primary competitor with cable for that niche. If DSS turns the corner and starts showing a ROI, it may be a very strong competitor to cable for pay TV, but the broadcaster would be a fool to get into the pay TV business. It'd make him less money than he can make with free TV.

The great fear of the local broadcaster is that the networks might abandon him in favor of direct *free* DSS distribution, IE the network would directly pay the DSS provider to carry their programming. That would cut off his major revenue stream, and force him to pay for his boutique programming. (The major networks pay the broadcaster to carry their shows, unlike cable where the cable operator has to pay the cable programming provider to carry their shows.) To stave that off, the broadcaster has made major efforts to inflate his local presence, primarily with beefed up news coverage of the local community. That can't be done via DSS. News is the largest expense most broadcasters have, but it has been seen as worthwhile because it keeps the network from jumping ship by augmenting the audience they can deliver to the network. (In a sense, the network is the largest customer the broadcaster has.)

DTV may change that. Nobody is really certain how, but it is possible that DTV will lower the broadcaster's dependence on the network. OTOH, it may do the reverse. For example, NBC stations may start carrying CNBC on one of their virtual channels instead of letting it go to cable. By making it free over the air, it can command a bigger audience, charge greater fees to its advertisers, and pay the local affiliate to carry it. It is possible that other major advertiser supported cable channels may be tempted to do the same, IE the Nashville Network may see it to its advantage to obtain a free over the air outlet instead of being relegated to cable. That would enlarge its audience, allow it to charge more for advertising, and start paying its DTV affiliate for its distribution. (If you make enough more money, it is worthwhile to pay for carriage.)

But that model doesn't work for HBO. HBO would be an expense to the broadcaster, and force him into the retailing of programming, with all the overhead that involves. Cable is already setup for that since it bills its customers monthly anyway, but broadcast is not. It would cost the broadcaster a reduction of 50% or more in ROI to switch from free programming to pay programming (that's the margin difference between the two forms today). Only an idiot would do that. (Now to be sure, there

are some idiots in the broadcast business, but the stockholders would
take a very dim view of a loss of return on investment of that magnitude.)

Amen!

Believe it or not America is still "free", along with the internet!

Or would you (Constantine) seek to limit the freedoms of Christians only
(or any religion for that matter)?

By the way (Constantine), if you have been to a shopping mall (or
watched any TV) lately, you would realize that "Christmas" is more of a
secular holiday than it is a religious (Christian) holiday,
unfortunately... (emphasis added)

Also, (Constantine) it is extremely ironic that you are named after (or
(more accurately - you bare the name of) a CHRISTIAN Church father!!!

Truly, I wish you a very Merry Christmas!

and that you would come to a saving knowledge of whom your "holiday"
celebrates...

4668. Meteor Shower Peaks

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-08 00:00:00 UTC
From: YPAK35A@prodigy.com
Message-ID: <66hhdr$1o9k$1@newssvr03-int.news.prodigy.com>
Source record: 184845

I have received a LOT of e-mail concerning 10 meter meteor scatter. This is great and it shows a growing interest in ms on 10 meters. One thing that keeps appearing in e-mail that concerns me is the importance that is being placed on the " peak time " of a shower. It seems that a lot of people seem to think that if you miss the peak you might as well unplug the rig and antenna and wait till the next major shower. This is not true. I won't get into the merits of running randoms BUT the only thing I am interested in knowing about the peak of a shower is knowing what DAY it will be on. I have for years found that if you run skeds the day before the peak, the day of the peak and the day after the peak, you WILL complete skeds if there are any rocks in the shower ! You do not have to be on the air the exact time of the peak ! You will find that there are a lot of rocks falling in association witht he shower that do not constitute the main body of the shower. Don't let the infamous " peak " keep you from running skeds ! Remember, I am always looking for ms skeds. 73- Larry WB5KYK

Then you'll have to sit for it instead because there isn't a blessed
thing you can do about it. Amor has identified the problem, and
the progression it is bound to take. And we are basically powerless
to do anything about it. Even if we could get the FCC back into the
enforcement business (fat chance), their jurisdiction ends at our
borders. What are you proposing to do, start a jamming war?
The outlaw CBers are much more experienced at that than you
are. They got their basic training in a much tougher operating
environment than amateur radio.

So what kind of interface do they require, and do you have that part as
well?

Thanks,
Rich Armstrong

I don't own any, but the RS UHF and VHF HT's have established a very
good performance and reliability reputation.

> be earned.

What worries me is the "my due" attitude. Rights, OTOH, _are_ inherent
(i.e. "yours"). Exercising them, without paying a heavy price, _is_ a privilege.

In the courts, so far, the little guy has lost the Federal vs. State argument
with respect to low power transmission. Outside the courts, the little guy
has already won, due in part to cheap technology. I know of five <5 Watt FM
stations on my side of Indy. THEY co-ordinate frequencies (you know, like the
FCC allows amateur groups to co-ordinate repeaters).
The majority of ordinary people know about the station nearest to my QTH, and
even if they don't listen, by their group inaction to do anything about it,
have shown how they feel about what the Federal Courts believe. "They're not
hurting anybody, so who cares?"
For better or worse, that's the way this country works.

This type of activity is what really provides good tests for local amateur radio club RF triangulation techniques. My club has "found" a couple of people bootlegging on amateur frequencies, and *convinced* them it's not the thing to do. Sure the amateur equipment is cheaper than the commercial, but I don't think you factored in the FINES when the amateur community turns you in.

That was really a stupid question to pose on the NG. With regard to the commercial gear, if you are thinking of bootlegging with amateur gear, than you are probably operating without FCC licensing with commercial gear right now.

I just hope the amateurs that WILL catch you if you bootleg on amateur frequencies are nicer than the ones I know...

> 2. minimum parts

Define minimum parts? 2 parts? 20 parts? 200 parts?

> 3. radiated output less than 250uv at 3 meters

"250uv at 3 meters" is not descriptive enough to perform a
measurement. You need to use some standard industry measurement
standard.

> 4. bandwidth less than 200khz with signal centered on operating frequency
> 5. non-stereo
> 6. line-level input
> 7. must be able to change operating frequency easily

Who will change frequency? User? Builder?

> 8. operate on 9-12VDC

At what current levels?

> 9. matched telescopic antenna

Built in? Attached by coax?

> 10. parts must be easily obtained without special orders

All parts? How about the PCB? Will you want only a single copy, or
will this design need to meet manufacturability standards?

> 11. can not be previously copywrited (stolen) design

> Will pay $500.00 USD for successful design and an additional $500.00 after
> full FCC certification. I will retain all rights of the design without
> further compensation of any kind.

What FCC certifications? (Part 15? Part 73?)

Will you obtain the certification, or will the designer be responsible
to obtain the certification?

Even if your spec contained adequate description (it does not), no
engineer would undertake such a design effort for the total sum
of $1,000.

It wouldn't even pay for his concept model and prototyping costs,
let alone his time. Just the fees to have an independent lab test
for certification would cost several thousands of dollars.

Will the transmitter be a consumer device and require other
certifications, such as UL, CE, CSA, or other safety testing?

We need a LOT more info to answer your query, and not even a
"hobby engineer" could design and satisfy regulatory/safety
certifications inside your proposed budget.

73, de Hans, K0HB/4ID

The TAPR assembly and system manuals for the TNC-2 (with command references updated to 1.1.8) are available on TAPR's ftp site (ftp.tapr.org in /tapr/software_lib/tnc). The MFJ manuals were adapted from these.

4689. Bulshitsky Antenna Reviewed

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-08 00:00:00 UTC
From: Rick Marks <rmarks@monitoringtech.com>
Message-ID: <348C8831.5B1F@monitoringtech.com>
Source record: 184866

As many of you know the famed Bulshitsky antenna originally had the most gain of any diople configuration or beam type antenna and variable take-off angles at the push of a button. Also the Bulshitsky was chosen for the HARP system but lost the bid due to political pressures to use an American antenna company. Now the Sam Houston Institute of Technology has finished a 3 year study of the Double Bulshitsky with some impressive results. Their computer models show that in the N configuration or the lazy Z this new design yields a 9db gain over the original model and takes up 1/3 the space. Thats a whopping 15db gain! Early reports using amateur operators showed with this antenna working WAS in 30 minutes was not only possible but easily done. All this is made possible with the use of the Bulshitsky patented microprocessor which has the ability to vary the takeoff angle of the antenna based on the freq. working and the time of day, both of which are programmed by the user no more buttons to push. The power handling has also been increased due the complaints of some amateurs that 20kw was not enough so the new model is rated conservativly at 55kw and test show that 100kw can be use in short durations. These highly sought antennas are not available to the public at the present time and those that had them for evaluation have returned them much to their disapproval, but the plans are out there somewhere. Look in upcoming issues of QST for the write up on the new Double-Bulshitsky antenna with microprocessor controlled takeoff angles.

You don't know what you're talking about.
Your 'question' assumes that there are, but you give absolutely no
proof.

The statistics are more than 10:1 if you look at only hams who are
10m-active. And the outbanders are a dedicated bunch with burning fire
in their bellies. :-)

-What cheap wideband or 10 meter radios are you referring to? Can=92t be=

the AH-100!

-Can you cite your source for increased 11 meter activity in the Southern Hemisphere?

"10m and the world above 28MHz is so much quieter than 27MHz, that new outband operators around the world are squatting there, much to the consternation of ham operators."

-I have not heard foreign or domestic out-of-band operators squatting on 10 meters. Have you?

-I have not heard any hams talking about out-of-band operators squatting on 10 meters. Have you?

I think Amor is pulling our chains just for a reaction so he can sit back and have a laugh. =

Considering the grim economic condition of many people in the Southern Hemisphere, it seems some would be better served with a Baygen Freeplay crank-power radio from South Africa. If they could afford one. If they knew they existed.

-Michael

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.5, 17 October 1997

The Linux Operating System is perhaps the only operating system in the world that can boast native and standard support for the AX.25 packet radio protocol utilised by Amateur Radio Operators worldwide. This document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew too large to be reasonably managed in that fashion. This document describes how to install and configure the native AX.25, NetRom and Rose support for Linux. A few typical configurations are described that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very flexible. To people relatively unfamiliar with the Linux operating system the configuration process may look daunting and complicated. It will take you a little time to come to understand how the whole thing fits together. You will find configuration very difficult if you have not properly prepared yourself by learning about Linux in general. You cannot expect to switch from some other environment to Linux without learning about Linux itself.

1.1. Changes from the previous version

Additions:
Joerg Reuters Web Page
"More Information" section
ax25ipd configuration.

Corrections/Updates:
Changed pty's to a safer range to prevent possible conflicts

Updated module and ax25-utils versions.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.

1.2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. This document is also available in various formats from the sunsite.unc.edu ftp archive <ftp://sunsite.unc.edu/pub/Linux/docs/howto/>.

You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

1.3. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol

features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@poboxes.com. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

2.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
|=========|===========|=============|=========|
| | | | |
| | | TCP/IP | |
```

```
| | ---------- | |
| | NetRom | | Rose |
| ------------------------------------
| AX.25 |
-----------------------------------------
```

This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram of Linux Network Implementation

```
-------------------------------------------------------------------------
User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
-------------------------------------------------------------------------
| Sockets | open(), close(), listen(), read(), write(), connect()
| |-----------------------------------------------
| | AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
|-----------------------------------------------------------------
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
|-----------------------------------------------------------------
| Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
|-----------------------------------------------------------------
| Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
-------------------------------------------------------------------------
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card
-------------------------------------------------------------------------
```

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker- nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam- ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker- nel includes the desired protocol that presents a programming inter- face that the call program can use. I have attempted to lay out this document in roughly that order.

3. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

3.1. Finding the kernel, tools and utility packages.

3.1.1. The kernel source:

The kernel source can be found in its usual place at: ftp.kernel.org

/pub/linux/kernel/v2.0/linux-2.0.31.tar.gz

The current version of the AX25 upgrade patch is available at: ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14e.tar.gz

3.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at: ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at: ftp.xos.nl

/pub/linux/ipfwadm/

3.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicates the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

```
Linux Kernel AX25 Utility set
---------------------- -------------------------
linux-2.0.29 ax25-utils-2.0.12c.tar.gz **
linux-2.0.28+module12 ax25-utils-2.1.22b.tar.gz **
linux-2.0.30+module14c ax25-utils-2.1.42a.tar.gz
linux-2.0.31+module14d ax25-utils-2.1.42a.tar.gz
linux-2.1.22 ++ ax25-utils-2.1.22b.tar.gz
linux-2.1.42 ++ ax25-utils-2.1.42a.tar.gz
```

Note: the ax25-utils-2.0.* series (marked above with the '**' symbol) is now obsolete and is no longer supported. This document covers configuration using the versions of software recommended above the table. While there are differences between the releases, most of the information will be relevant to earlier releases of code.

The AX.25 utility programs can be found at: ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

4. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

4.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.31.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14e.tar.gz
# patch -p0 </usr/src/ax25-module-14/ax25-2.0.31-2.1.47-2.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...
```

The options I have flagged with a `*' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what other options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
```

```
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want it and then edit your /etc/lilo.conf file and rerun lilo to ensure that you actually boot from it.

4.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In nearly all installations you gain nothing but additional complexity. Many people have problems trying to get the modularised components working, not because the software is faulty but because modules are more complicated to install and configure.

If you've chosen to compile any of the components as modules, then you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules file that will ensure that the kerneld program knows how to handle the kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

4.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler. That being said, it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

4.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

4.2.1. A patch kit that adds Rose support and fixes some bugs.

The standard net-tools-1.33.tar.gz package has some small bugs that
affect the AX.25 and NetRom support. I've made a small patch kit that
corrects these and adds Rose support to the tools as well.

You can get the patch from: zone.pspt.fi
<ftp://zone.pspt.fi/pub/linux/ham/ax25/net-
tools-1.33.rose.tjd.diff.gz>.

4.2.2. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# zcat net-tools-1.33.rose.tjd.diff.gz | patch -p0
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

4.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42a.tar.gz
# cd ax25-utils-2.1.42a
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.
5. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

5.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

5.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200

The structure of the files in /proc/sys/net/rose/ is as follows:

FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3

To set a parameter all you need to do is write the desired value to
the file itself, for example to check and set the Rose window size
you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

6. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to
obtain the parameters for the various AX.25 ports configured on your
Linux machine. For AX.25 ports the file that is read is the
/etc/ax25/axport file. You must have an entry in this file for each
AX.25 port you want on your system.

6.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig'
command. This is the object that the Linux kernel sends and receives
network data from. Nearly always the network device has a physical
port associated with it, but there are occasions where this isn't
necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most
common is probably the KISS driver, but others are the SCC driver(s),
the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is
started.

6.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

6.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyq*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyq*' and the slave ends are called `/dev/ttyq*'. There is a one to one relationship between masters and slaves, so /dev/ptyq0 is the master end of a pipe with /dev/ttyq0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyq0 /dev/ptyq1
# /usr/sbin/kissattach /dev/ttyq0 port1
# /usr/sbin/kissattach /dev/ttyq1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyq0 and /dev/ttyq1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

6.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

6.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

6.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

6.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

6.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

6.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

6.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

6.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

6.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

6.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@poboxes.com has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

6.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

Joerg's web page <http://www.rat.de/jr/>

or:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following commands were what I used to compile and install the package for kernel version 2.0.30:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0-scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

6.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

6.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may

specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card
PRIMUS
the PRIMUS-PC (DG9BL) card

```
BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

```
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

6.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

6.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

- --- END Linux AX25 HOWTO part 1/3 ---

>It will cost the average broadcast station well over $1 million to
>convert to HDTV/ATV format, more if they have to build a new tower.

That's only the tip of the iceberg. That'll buy you a transcoder and a new transmitter, but it won't start to convert your studio to digital. If you go HDTV, you need all new cameras, all new tape machines, all new switchers (routing, production, and master control), all new monitoring equipment (that alone would run well over a million for the average plant), etc. The industry estimate is $50 million to convert a major market station to HDTV.

Of course you could keep everything analog NTSC inside the plant and let the transcoder convert it to DTV for the new transmitter. And that's what lots of stations will do. As they do regular facilities upgrades, they'll create digital islands in the station, interconnected via transcoders, until they finally convert completely to digital in 10 to 15 years.

You've got that right. The EIAJ is grinning from ear to ear about all the new TVs they're going to get to sell. It represents billions in Japan's pockets. And the software companies are grinning too. Defacto this move makes every TV a high resolution computer display, and the rest of the computer costs little enough that most households are expected to add it as an option. That expands the software maker's market enormously.

Do you own one of these? I just bought one from a SK but the box did not contain the manual and I did not want to ask the wife to search for it. If you have used this radio, then you know that it is not intuitively obvious how to program it. I will pay $10 for your time, effort and goodwill to make a copy of the manual and send it to me. I appreciate any help. Thanks,
John KA4JDU

Alinco DJ-F1T, used only a couple of
times, still has origional box and looks
brand new.

40 memory channels, CTCSS encode, decode,
and scan (easily find out what CTCSS tone
is being used by another), page others
and send messages, DTMF encoding and decoding
with full 0-9,*,#,A-D keypad, is capable of
xmitting up to 5 watts, outer case is
4.3 x 2.1 x 1.5" with battery pack.

tx 144 to 148mhz,
rx 138 to 174mhz, and
rx 118 to 136mhz AM aircraft.

Mars / Cap out of band TX capable, just clip
the blue wire.

Comes comlete with battery pack, antenna,
instruction manual, service manual (normally
ordered extra), belt clip, battery charger,
and will come in it's origional box.

Heck, this thing is as close to mint as
you can get.

Asking $119.95, OBO.

please remove the second N from the end of
tdragon in my address to respond,
Jack Shannon

Hillary makes me want to puke ... besides, if one thinks of who's
been first lady since Jackie, your comment isn't saying much.
Let's see:

Lady Bird Johnson
Pat Nixon
Betty Ford
Rosalyn (sp?) Carter
Nancy Regan
Barbara Bush

(need I say more?)

Hillary still makes me want to puke ...

I *AM* opposed to code testing ... but, until the ITU treaty is changed to
remove the "requirement" (which our State Dept. is not likely to be
excited about taking an exception to, despite the fact that it's well
within our rights)), dropping the code speed to 5 wpm would be an acceptable
compromise. It would open the doors to many more people whose interests
are in more modern things, not antiques, and would allow the olde fartz to
see that the end of the world will not occur if it is admitted that Morse is
no longer king.

And now they're only going to bother to publish QEX every other month
instead of "monthly" ...

> I fired off a letter to Dave Sumner about this, but he didn't even have
> the courtsey to reply.

What part of that surprises you??? Sumner is a weasel and all he cares
about is begging for more money so he can make sure his paycheck doesn't
bounce.

> More recently, I talked face to face with my
> director about this. He at least acknowledged that it was policy to
> dumb down QST in hopes of attracting new members.

That's all they REALLY care about (besides maintaining the status
quo ... and their status, of course) ... getting new "members" to
send in their money.

I found that
> shocking, and told him so.

I hope it made you feel better to "vent" ... because I'll bet money that
that was all the exercise (telling your ARRL BOD member how you felt) was
good for ... I have YET to find one who gives a damn what anyone else
thinks ... maybe one exists, but I sure haven't found him/her.

> I reminded him that it was the technical
> leadership by QST which led many beginning amateurs to aspire

> surprise him.

So he's a typical ARRL official ... backward and clueless.

> And BTW, I tend to consider my director one of the more responsive and
> responsible members of the BOD. He listens. He's a genuinely nice fellow.

I used to live in a different division, and the director from there (now a
member of the ARRL "Executive Committee" gives every appearance of "being
responsive and responsible" and he, too, is "a genuinely nice fellow.
(thought continues after the rest of your paragraph ...)

> But he doesn't seem to grasp the essential nature of the soul of amateur
radio,
> or the need to feed and nurture that soul from time to time. He lacks "that
> vision thing" which is needed in a leader. I asked him where he's trying to
take
> amateur radio, and he didn't have an answer. I got the impression he didn't
> even understand the nature of the question.

The BOD member I am talking about is EXACTLY like that ... he has NO vision
whatsoever ... he comes across nice, and he's probably worked DXCC, but he
is totally clueless about anything that is more than minimally technical and
he has all of the leadership instincts of a sub-average lemming. But he's
SO nice ... in a Bill_Clinton_slick_politican/really_smooth_used_car_salesman
sort of way, so he keeps getting elected.

> up, you're "shocked" at the content of QST?

I find it shocking, too ... the material that you refer to is a waste of
QST space and should be an insult to the intelligence of anyone with even
a tech ticket. That the ARRL publishes such crap is a clear indicator that
they don't care a bit about the level of technical proficiency of new hams ...
they are just filling the space between the ads because they have to to
rake in the big bucks from the advertisers. The audience is captive, and
(unfortunately) I suspect that most of the audience only cares about the
DXCC and contest information anyway ... the ARRL is dominated by the
appliance-operating/DX-chasing/stomp'em_into_the_dust_in_the_weekly_contest
know-little about radio except how to push the buttons (including the ones
that make the beeping sounds) "hams."

> Ham radio is no longer a technical hobby. Its an appliance operator hobby
> with little to moderate technical content for those interested. The
> majority just want to communicate, they don't care about the underlying
> technology all that much.

THIS IS THE DOING OF THE ARRL ... THEIR POLICIES AND AGENDA HAVE CAUSED
THIS ABOMINATION ... and MORE OF THE SAME is their "vision for the future."

> And, QST reflects this.

> That's nice, but that's all history. This is the day of instant
> gratification. Free communications. Technicalless content. The
> amateur radio you aspire to is long dead, killed by the repeated
> dumbing down of our licensing requirements over the years.

That's hogwash, Mike ... don't try to pin this on the "dumbing
down" that you allege the existence of the no-code tech class
represents ... THIS IS THE DOING OF THE ARRL ... THEIR POLICIES

AND AGENDA HAVE CAUSED THIS ABOMINATION ... and "more of the same"
is their "vision for the future." (they still haven't figured
out that "more of the same" is bringing them damned few of the
newcomers as members ... maybe we'll get lucky and they'll have
to declare bankruptcy in a couple of more years)

> But, getting back to what you said earlier on:
>
> >I'm not surprised that you've never seen it, Michael. That fits with your
> >know nothing attitude toward anything more technical than closing a
> >switch or licking a UPS label.
>
> I'm sorry to see an otherwise serious discussion degraded to Stevenson's
> level with personal insults, Gary. Unless you're prepared to present
> solid evidence of my technical ability, your personal insults are
> best kept to yourself.

Gee, Mike, you'd better be careful ... DejaNews contains PLENTY of
evidence in your own words about how little you know and how little
you CARE to know ... Gary could easily hang you with your own rope
on this one ...

> Our current crop of amateurs is also being educated by QST.

And any shortfall in results is the fault of the ARRL for having
such crappy content in QST ... THIS IS THE DOING OF THE ARRL ...
THEIR POLICIES AND AGENDA HAVE CAUSED THIS ABOMINATION ... and MORE
OF THE SAME is their "vision for the future."

> The "New Ham Companion", with questions like "I keep seeing PTT mentioned
> in my HT manual, but I can't find a button labeled PTT. What do I do?"
> epitomizes the "technical content" of today's radio amateur.

The same sort of "good old boy politician" incompetence that results in
tremendous waste, inefficiency, and corruption in our federal government
is alive and well at the ARRL ... the state of QST, our testing program,
our licensing system, and our backward technical rules are ALL *direct*
results of the incompetence of the ARRL "leadership."

I agree with much of what you complain about, Mike ... I just don't
think you are looking in the right place for the root cause.

Hi Dave, some goof send a merry xmas TO ALL.
He has the freedom to gteet his equals and let the rest of us free to
see riligion the way our freedom of religion and freedom from religion
allows us. So I asked him to consider the rest of us and apologize for
sending us (ALL) greetings from his religion.
If he has the freedom to badger us, we then have the freedom to ask him
to behave.

Carl is too quick with the B word, but think a moment. If the survey was in QST, then only ARRL members would see it (ignoring the small number of newstand sales of QST). But that tear out was only for "informational purposes" we're told, and wasn't part of the published survey result. They do claim to have mailed out a select few to non-members (some 20% of the mail outs went to non-members they say). Unfortunately, claims are all we have. They didn't see fit to release the full statistics on the survey, so there's no way to judge just how representative it was. I'd be very interested in a demographic breakdown of the survey participants.

Tim:
Don't underestimate the profits in the Broadcast TV business.
They don't pay the High 6 figure news readers that salary without
good revenue. Engineering dept's have been living hand to mouth for
years now. Most plants are very out of date, some haven't even discovered
stereo yet. Most terminal equipment is a least 25 years old, many
transmitters
older still. The Broadcaster has choosing not to invest in technology,
except to
cut personnel. Having spent over 35 years in the business I saw a great
change
in those years. When I started the best equipment was the norm and quality
came first. Today that just isn't true. The revenue is going to pay managers
and New Reader salaries and just let the plant run down. Glad I have retired
as the budget wars won't be pretty. Don't expect any large changes very
soon.

It works this way. If there is not enough in the way of donated support in any given month, I write a check to pay the difference. Its been that way the last 18 years of our existance since Dr. Chalfin started the "Newsline Support Fund." Before that, for a bit over three years; I and/or Bill Orenstein KH6QX paid it all out of pocket. Some months, I still do.

I have thought that it was not the best thing to split into two
magazines. CQ has down the same with CQ, Popular Communications and
Ham Radio. The NRA has three magazines. It splits the hobby. We
need to see the other aspects, we might learn something and maybe

have new interests. I do not like the current rage of narrow casting.

I would like to see QST and QEX merged. It would be better for the hobby. I just can not afford to buy all the mags out there. Plus there is becoming to many organizations. These should be merged under the ARRL umbrella. I do not like my hobby split. We have enough division in this country as it is.

Funy that you are trying to analize my childhood.
It takes thinking and a clear mind to do so.
The fact that you are talking to me ONLY in this note and you are
sending it to the group reveals you thinking, (fuzy)

why would you be so aggressive in
>attacking Christians??
I never did attack, I just fought back.

> I simply wished everybody a Merry Christmas what is your problem
>you must have something under you skin.I will accept YOUR
>appoligizes,and YOU make Right To all i don't feel i was Attacking
>anybody when i said (Greetings).
You were not attacking, you were offending.
All you had to do was to wish MX to all christians.
I read your message, to see the fulishness that reings this time of the
year and I realized that this message was ALSO addressed to me, I am

one of the "ALL" that the message was adressed to.
Especialy christian greetings are ofensive to the ones who know
christianity.
I asked you before, WHY THE 25 of DECEMBER?
Since you prefer to send all messages through the NG and since you are
proud of the 25 of December, give us a rundown HISTORICALY what
happened (any time in the past) and you celebrate the 25th of December
Are you prepaired to change you beliefs when you find the truth?

Gary,

I'm sure it was just an oversight on your part, but the FCC
spec's radiated emissions in uV/m, not plain old uV ...

If the guy had said uV/m, it *would* be enough to design to.

So, your experience is different than his. Its also possible that the multi-millionaire CBers that you know would not be interested in trying to buy a band.

The standards to be used for part 15 measurements are listed in section 15.31, "Measurement standards".

Well lawrence that sure does bring back some memories, you must be an
oldtimer if you have use the undoubtedly best ground wave antenna known
by its commercial name the Kowpie(no C). Yes the Bulshitsky comes from
similair backgrounds but has you may remember the composite material of
the Kowpie had problems after it dried. The earth coupling
charactristics changed and the effiencey went it to the dumper so the
Kowpie was really only useful on field day events for those short haul
tough to get contacts and after that it dried up and blew away. This was
also the favorite antenna of the enviromentalists.
73's and good luck!

Spoken like a true "technician" Dwight!!!
The effect that no-code has had on 2mtrs. is evidence of my description
of "riff-raff". Heck.... we have 3 or 4 no-code techs on 2mtrs around
here that still say "10-4".....need I say more???

If they don't have "the time" to learn the code, they don't have "the time"
to go on the air.....so, what are they complaining about? They wouldn't
have "the time" to be an amateur....no loss,

The biggest problem is that you can't block the ionosphere (I wish we could). All the policing you can do within the US, will not stop those outside from "skipping" into our radios. While we can make a difference when gypsy cabs run on 10 meters in New York, or fishing boats in the gulf, you aren't going to stop Manuel and his drug running buddies from Columbia....

And from what I've seen from the FCC, they are less than entusiastic about solving a problem on the ham bands. Unless the person is causing interference to a commercial band (READ: a band the legitamate users had to PAY for access to), they tend to drag their feet.

Ironically, this CB stereotype, seems to be propagated mostly by truckers (At least in my area). To them, you are either A. a truck driver, or B. On welfare, or C. work at Mc Donalds. We seem to regularly have this "discussion" with the "echo crew" that drop off of 19 and squat on our home channel, right in the middle of conversations. One guy overheard me commenting about having to winterize my boat and motorhome, and wanted to know how I could afford those things on Welfare. I told him, "well, I make as much (or more) in 8 hours, than you do in 15. I'm home in my warm house with my feet up and a cold one in my hand, while you're still fighting the traffic. So who's the idiot?"

Actually, this is NOT true. A ham might not have 30 minnutes, twice each day, in which to learn the code or increase his speed to the present licensing levels. He might easily have an occasional hour or two in which to operate -- but which are not regular enough to schedule for learning the code.

Other than for the licensing requirements, there is no longer a "need" to learn code -- and many people simply do not wish to waste their time on an obsolete encoding scheme.

"No loss"? You have no way of knowing this to be the case. It would be "no loss" for ham radio to lose that attitude.

As if they had uttered the profanities that I hear out of coded hams every day/night on 20m and 75m. One day I gave a shout to my friend, Harold, on 147.405 at a hamfest. I said, "Hey Harold, got your ears on?" A ham standing close by said, "We hams don't ever, ever say stuff like that. How long have you been a ham?" I said, "45 years, since before there was a Citizen's Band", and walked away as his mouth was hanging open. Condemning someone for saying "10-4" is equivalent to condeming someone for the color of his skin. Please share with us what it's like to be a fascist in 1997.

Only CB-types say "2mtrs". We Real Hams always say "2m" in our postings. And by the way, your English is no better than the guys you are complaining about. Please learn when to use the word "who" and when to use the word "that".

10-4, good buddy, Cecil, W6RCA, OOTC

A fairly large percentage of hams don't know code. A fairly large percentage of the people in the world who know code are not hams. In short, you don't know what you are talking about but your irrational screaming is a perfect indication of what is presently wrong with ham radio. Thanks for the lesson.

4739. How do I get the power company to solve my QRN problem?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-09 00:00:00 UTC
From: frohro@wwc.edu
Message-ID: <frohro-0912972139220001@10.0.2.15>

Hi All,

I have lived with an S7 QRN level in several directions for about five years. It became obvious to me a long time ago that solving that problem was the best thing I could do to improve my station's performance. I contacted the power companies (there are two in this area) and the biggest one pointed its finger at the smaller one who solved a few minor interference problems. The major ones were never solved because they said that my HF antenna (a four element quad on a 120 foot tower) could pick up things so weak they could never locate them. I then bought and SEM QRN Eliminator which is similar to the JPS one now available. It didn't perform very well because I never could get another antenna as good as my quad at picking up the QRN and so it couldn't be phased out very well. I've tried a number of rigs with nice noise blankers. They help, but recently I decided that I would go back to the source and solve the problem there. I purchased a handheld SSB receiver that will receive into the UHF range and built a nice little 435 MHz quagi. I have found it pretty easy to walk the streets and find power poles that are noisy. I have reported them to the local power company. Unfortunately they are glacial in their response. I finally talked to the guy who looks for RFI problems today and he said that he would check the four poles I had originally turned in, but no more. Today I found two more. I want to continue the process until the problem is solved. I'm wondering if anyone knows of a way to build a fire under the electric company. How can I make them more interested in this? I was told today that RFI is a very low priority for them. I think they don't think eliminating something I can hear with such a large antenna is unnecessary.

Any suggestions would be very welcome!

For some strange reason, truckers think they are the only ones earning a
living, and as you say, everyone else is working for minimun wage or on
welfare. Since taking early retirement, I still make as much or more
than most of them do, and that is part-time from home.

Well, the band is open today and is croweded with ham activity and there is no 10-10 contest. However, most of them are exchanging 10-10 and all those other dumb numbers that they chase. I have yet to figure out what is so fascinating about collecting a log book full of usless numbers, but it if you answere a CQ on 10 meters and you don't have a bunch of those silly numbers to give the other station, they don't want to talk to you.
And there are a lot of "outbanders" to be found on the band also. Really hacks them off when you fire up a kilowatt of ssb on top of them.

Hey Glen,

The FCC has nothing to act with, and hasn't anyone clued
you in yet as to what their REAL purpsose is now?

Hint: It has nothing to do with ham radio, and you will never
see the Failed Clown Company ever again have
anything to do with ham radio, except for a little while
longer to issue licenses and only in safety of human
life conditions. That's it! Ham radio is slowly
self-destructing.

KV4FZ did not pay taxes from 1988 through 1993.
The base amount is $66,000 with penalties & interest
to be added to this amount.

KV4FZ did not pay the $5,000 fine which was levied
on him for his three telecommunications felonies which
he was convicted of.

KV4FZ still owes legal fees to his attorneys.

Details today on 14300/14313

Hi,

I am going to be part of a crew that is sailing from Australia to the Cook Islands next March. We are looking at getting WeatherFax installed at the lowest possible cost. Options that seem to look promising so far are computer software and a Scanner, but I am unsure if this would work or not as from what I understand it might need to be an actual HF rx'vr. If anyone is able to help on options and costs it would be greatly appreciated. Sorry if this is posted in the wrong newsgroup as after looking through the list of groups this seemed to be the best one I was able to find that would be able to help.

Thanks,

John.

>Has anyone bought one of these CDs? What do you think of them?

They're a great idea for saving space, and still having the material available. The b&w color on the 5 year CDs isn't a major drawback, especially considering that most of the mag was already black & white type. I suspect that the search engine could use some work, but I also note that the indexes for each year are faithfully preserved too, so it's just slightly more work if the search engine doesn't work. It's also easier to find than the december issue of whatever year in the past. My advice, try buying one 5 year one, and play with it for a few weeks. If it meets your needs, buy the rest, and give away or sell the paper issues.

You can receive weatherfax on a setup such as the following:
Ham transceiver with HF general coverage receiver.
A TNC such as the AEA PK232 with PKFAX or similar software
on at least a '386 computer.
A compatible printer that the software recognizes (I've used
an Okidata ML-391 dot matrix printer than can emulate the
IBM proprinter and the Epson LQ series). Updates to programs
such as PKFAX probably include drivers for inkjet and laser printers.
If you are using Windows based software, you would be able
to save the image to screen and print via any Windows compatible
printer.

I've no idea why you would want/need a scanner (assuming that you
mean a computer graphics scanner) unless you want to SEND a
weatherfax. If you mean a HF receiver scanner - scanning functions
work poorly on HF weatherfax reception due to constantly changing
propagation. Generally, the scanning receiver doesn't lock on the
best band for the HF station desired.

The setup works well but you do have to be experienced at tuning
and sychronizing weatherfax signals.

The simplest way would be to go to your local marine electronics
supplier and buy a self contained Alden, Furuno or JRC weatherfax
receiver/printer - some now also have a built in NAVTEXT receiver
(which you really should have for offshore long distance cruising).
Check prices - they've dropped quite a bit lately.

Why not first try to do it by the book? Put your base station in
whatever good location your repeater might have been and install a
land-line from your office to the site? That will solve all your
base to mobile comms. Do you need to have mobile-mobile? They'll
just chatter about girls and pizza anyway :-)

Several of us are coders who are against useless morse. But
rather, we suggest practical exams such as changing the freqs by VFOs,
storing the freqs into the memories, connecting the packet with your
computer etc. Not knowing these things are no better than not
knowing the code.

> Your 'question' assumes that there are, but you give absolutely no
> proof.

John,

So you're saying that there are more blue collar millionaires than
white collar criminals???

Let's analyze, shall we?

Ok...how does one become a blue collar millionaire? Well, it's virtually
impossible through hard work alone. A person could probably acquire a
tidy savings but it'd take YEARS or even DECADES to do so. They could
invest their money but only a small percentage of the time would that
investment lead to wealth rather than no movement in net worth or financial
ruin.

One could inherit the money...but if there was that much money in the
family one would wonder why you'd be blue collar in the first place unless
it was a distant relative, in which case it'd be very unlikely you'd get any
significant portion of the estate...in either case, the chances of inheriting
a million bucks are very very slim.

The final two ways I can see for a blue collar worker to get a million bucks
are to win the lottery, which hardly constitutes EARNING the money as much as
it does just getting lucky (although I suppose they earned the investment
capital necessary to buy the tickets to win), or to file a legitimate or
phoney insurance claim of some sort, which itself hardly constitutes hard work.

I'm going to guestimate a bit but I think it'll be reasonable:

Odds of Any Particular Blue-Collar Worker Becoming a Blue-Collar Millionaire

Hard Work: nil
Inheritance: 1/[20(+/-10)] (and I'm being MORE than fair here)
Lottery: EXTREMELY Low Odds by definition
Insurance: 1/10 maybe or less

So basically, it's pretty darned hard to become a blue collar millionaire.

On the other hand, according to American corporations white collar crime is not only a HUGE problem but a GROWING problem. On Discovery last night on the Justice Files they were talking about just shoplifting, not technically a white collar crime mind you but still indicative. They said the average shoplifter steals $90 worth of merchandise while an internal thief steals $300 or more worth of merchandise. At one job I had, the managers were finally caught stealing hundreds of dollars and thousands of dollars worth of (food) merchandise. With S&L Scandals, fraudulant home equity loan schemes, embezzlement (at my current company the previous book-keeper made off with $20,000 or so, ended up in jail but we never saw the money again) and even (though I find it harder to believe than Conservatives just cry-babying over a Democrat getting elected President) the President is accused of white-collar crime, I find it difficult to understand (unless you are extremely mentally challenged, John) how you could believe that blue collar millionaires could outnumber white collar criminals.

The point being that hard work alone and "earning privileges" cannot account for millionaires. There are a very few who did it through hard work but most inherited their initial investment capital from rich daddy (they were never blue collar to begin with) or broke one or more laws (usually tax evasion at the very least) to get where they are. Or they did it through highly unethical circumstances though not technically illegal. Bill Gatus of Borg basically stole the design for MS-DOS from Digital Research (ever notice how much it looks like CP/M...I wonder why?) and then screwed over IBM in his rise to power. Just because IBM deserved it, maybe, doesn't make it right for Bill to have done it.

In either case, John, if all you're going to do is sit around and repeat the party line and protect the wealthy and the powerful with your words, then don't accuse me of having no proof. Especially, when what comes out of your keyboard is so absurd. Basically, this whole thread got started because, like the good Puritans, the greatest concern of hams is that somewhere somebody is having a good time and you MUST put a stop to it...unless, of course, they're officially licensed to be part of your little fraternal club. Do no-code techs have to carry around little paddles with their call-signs on them?

Face it. You don't give a damn what I say, no matter how well-reasoned it is. All you care about is proving me wrong because I'm not you. I, on the other hand, only care about making America more free and convincing you to stop trying to stop me.

To my knowledge, only one amateur was ever assigned an amateur callsign which contained no numerals, only letters. (This was an official government assignment, not a "self assigned" handle.)

Who was this amateur? What was the call? Why was it assigned?

(Hint: This same amateur once held (jointly with another station) the record for the longest-distance HF communications.)

I, too, have only heard of one. Ernst Krenkel (1903 - 1971), RAEM,
was assigned the callsign of the ship "Chelyuskin". He had maintained
the radio communications which helped to rescue the people who had
been aboard. For his merits, he was allowed to use the ship's callsign
as amateur callsign.

"Chelyuskin" failed in 1934 during a journey in the Arctic Ocean.
The ship was damaged by the pressure of the ice and sank. The
people who had been aboard set up a camp on the ice and were
rescued by airplane after two months.

The world distance record was made in 1930 between Krenkel on
Franz-Josef-Land and the U.S. expedition near the South pole.

I'm curious as to what garners this opinion of CBrs. Most of the CBrs I know live in brick houses, and use CBs to hunt or conduct other recreational activity, with children involved, and therefore behave extremely well. Some even drive 120,000 dollar rigs that they payed for themselves (truckers are more likely to have a CB than any other) through money they earned themselves. Perhaps yours is only an opinion garnered from city-CBr activity, activity with which I am not familiar. Better check your facts before you start making up fiction for such a large general population.

The FCC seems to think it is. That's exactly how they specify it in Part 15. Anyone competent to design this device will know how to meet Part 15 standards.

The "usefulness" of CW brings first to my mind the concept of it being a "filter". It keeps the "riff-raff" from adding to the QRM of the HF bands. Without a benchmark to seperate the masses, the HF bands would just become another wastland like 11mtrs. has always been. My vote is to keep the CW requirments as they are. They are not unreachable by anyone -handicapped or not- if they are willing to put forth the effort to learn it.

AZ_PROJ map server at http://www.appliedreasoning.com:1080/
--------------2EC945B1377B3FA6DBE18FFB
Content-Type: text/plain; charset=us-ascii; name="azproj.ann.newserver"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="azproj.ann.newserver"

Announcement: AZ_PROJ Azimuthal Equidistant Map Server Site has moved.

There are now two new server sites.

http://www.wm7d.net/azproj.shtml

This site is sponsored by Mark WM7D who also runs the WM7D call sign
datebase.

http://ns3.qth.net/azproj.sthml

This site is sponsored by Al K3TKJ who also runs the QSL.NET site.

The current released version of AZ_PROJ is v1.04. Pointers
to this code are on the map server sites. The servers are
running v1.1beta2. This beta code will be available by ftp when
I get the local ftp site running on qsl.net.

---------------------

General blurb about AZ_PROJ

AZ_PROJ is a collection of postscript files and data
files for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,
show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

AZ_PROJ can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
```

unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the maps
on screens.

Although a rudimentary understanding of postscript will
help in running AZ_PROJ, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The AZ_PROJ files are GNU copylefted.

Christmas is an official United States holiday. That means that it is a holiday for ALL citizens of the United States. Therefore, it is perfectly acceptable to send holiday greetings to ALL.

How you celebrate Christmas, or don't, is a personal matter. It is just sad that you choose to celebrate it in such a negative way (by attacking others).

Merry Christmas Constantine.

REPLY...

Christmas is an official United States holiday. That means that it is a holiday for ALL citizens of the United States, not just Christians. Why wish only Christians a merry holiday, and ignore everyone else?

> -- political correctness encoder turned on--

You can't win Jeremy. If you wish everybody a "Merry Christmas," you will hear negative comments from people who want to twist Christmas into a Christian-only holiday. If you listen to them, you will hear negative comments from people like me.

What to do? Christmas is celebrated by hundreds of millions of people around the world, from many different religions (and even by many with no religion). And, like I said, it is an official US holiday. So my suggestion would be to simply ignore the idiots who want to pervert the spirit of Christmas and wish everybody a Merry Christmas. The idiots will got over it. :-)

Merry Christmas Jeremy.

So, by your argument, everybody in America that does not know code is "riff-raff" that needs to be filtered out of the ham bands. And everybody that does know code are, somehow, better human beings.

No wonder ham radio is dying (nobody wants to be around people with attitudes like yours).

> They are not unreachable by anyone -handicapped or not- if they are
> willing to put forth the effort to learn it.

Some people work (go to school, etc.) and are simply too busy to spare the time needed to learn code. You might say that people should allocate the time (if they want to use the ham bands). I would respond by saying that code is a waste of precious time, especially when it serves so little real purpose. Compared to the many other things in most people's lives, code is rather irrelevant.

Dwight Stewart (KF4URZ)

4791. Yaesu FT-50 Short battery life

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-09 00:00:00 UTC
From: deforger@aol.com
Message-ID: <19971209222700.RAA12646@ladder01.news.aol.com>
Source record: 184822

I had a problem with my FT-50 battery going dead in a short amount of time. I used it on and off and didn't follow how long the radio was on or transmitted with,but it seemed
ever 3 or 4 days it would dead.I read the postings about the radio turning on by accident
when power button was tapped and Yaesu responded by making a shorter power button.I decided to activate the auto shut off feature and set it to 30 minutes to avoid this problem.The battery still had a short life.Everyone i asked said it was probably a bad
battery.The battery in question was the FNB-41 9.6v 600mAh that came with the radio.
I had always used the Yaesu rapid charger and thought i may have damaged it,so i tried
my FNB-49 6v600mAh which also came with the radio.The same thing dead in 3-4 days.Now i recharged the FNB-41 and installed it on the radio.I also recharged the
FNB-49 and let it sit.Now i went on vacation for 7 days leaving the radio home and off.
I came home to find the battery dead.The FNB-49 was still charged so i installed it on
the radio and let it sit in the off position,and i recharged the FNB-41 and let it sit.The
battery that was on the radio always went dead.Now i was positive the batteries were
good and the problem was the radio,it was draining current when in the off position!
I posted my problem and hoped someone could help me. Everyone said it was the
batteries.Finally Gerard answered me that he had the same problem and had corrected it.It seems that some FT-50 (not all) are draining between 4 and7 ma when
the unit is off.Some are draining 0.02(which is normal) and most are draining 4 to6 ma
enough to exhaust a battery after one week.Mine drain was 10ma.You can check this
by connecting your multimeter to the right power pin on the radio/battery and switching
the unit off.
The people from Yaesu have produced a technical notice to cure this problem:
2 resistors have to be changed on the CNTR-UNIT:
R2102 has to be replaced by a 56K
R2103 has to be replaced by a 10K
The resistors are hard to find because they are 1/32W(one millimeter long)

Gerard repaired his himself.I sent mine back to Yaesu in California
to have it repaired under warranty.Yaesu had the radio back to me in 2 weeks
and also reimbursed me for the shipping to them.The battery Lasted 3 1/2
weeks(FNB-41) with
some short timed transmits and monitorings.Problem solved!!!
Gerard said his Yaesu dealer had no complaints until his .At Gerards
request his
dealer contacted Yaesu and 2 month later received the fix.
To perform the modification is a little bit tricky:
To have access to the CTRL-UNIT you have to open up the set after removing the
battery,knobs,and keyboard. The keyboard is removed by peeling the Ni-CAD decal
off the back of the radio and removing the screws that hold the keyboard.Then
you have
to seperate the main board and the ctrl-board(retained by a plug and 2
screws).Then
you have to locate the 2 resistors(It's easy with the drawing!) desolder the
existing
resistors and resolder the new ones.
These are the parts listed on my warranty repair order from Yaesu
Service
J24185103 CHIP RES, RMC1/16 103JATP $.02 QTY 1
J24185563 CHIP RES, RMC1/16 563JATP $.02 QTY 1
RO153210 LEAF SPRING (USED FOR ???) $.42 QTY 1

I hope this helps.If you need the drawing let me know and i will E-mail
it to you.I will also post to group later.
I just purchased this scanner a i'm still not fimiliar with it's operation.
Good Luck!

: Yes guys this message mekes sence, it is adressed to the proper people.
: I do not want to spoil your fun but reading the above a question was
: generated.
: Excactly what other religions celebrate Xmass around the world??

Most societies celebrate this time of year for one reason or another. That is why the PC thing to do is happy holidays. The fact that the xtains chose to place their celebration on this same time of year is less than coincidence. It was an attempt by the early church to quell the masses want for a celebration during the shortest days of the year.

The people were used to having a celebration to show their thanks to their gods for the return of the sun. Almost all religions realzed that the days were getting shorter and wanted their gods to stop this. They created many differnet celebrations to coincide with it. So ... The Church decided that they needed to celebrate the birth of Jesus. Since nobody really knew when the birthday was, they chose December the 25 which put it at the same time as the usual "pagan" celebrations. This gave the newly converted xtains a tool that could distract them from what their old cronies were doing.

That is kinda a vague and brief explanation of what happened, but it is enough for this forum.

I wish all a Happy holiday season no matter what your beliefs! Even if you don't celebrate anything. Have a beer just 'cause it gets dark out sooner than it did last week! (Unless you live on the southern Hemisphere, and then, you are should have one cause you get to do more in the longer days, and need to relax after a very long day! :) But, who needs a reason to have a good beer anyhow!

I feel just the opposite. If it is at all true that the "airwaves
belong to the public" as we have been taught since time in memorial,
then it is the unlicensed public that has the greatest say in all
telecommunications issues, including that of the standards that we as
licensed radio amateurs must adhere to.

Then again, if the so-called spectrum auctions continue (actual
spectrum license auctions) and the use of the spectrum continues to go
to the highest bidder, then it could well be that it will be General
Electric, ATT, Time-Warner, etc. whom we will have to seek out as they
may well purchase the right to determine the standards for all of
telecommunications. Now thats a really chilling thought.

What's are "transtains"?

We have "xmitter" for "transmitter", "xmission" for "transmission",
"xformer" for "transformer", but in 21 years of hamming, I've never
seen nor heard of "transtains."

Could that be the residue left behind after an electrolytic cap explodes?
Or the desktop marks from the xmitter's little rubber feet?

30 minutes a day, twice a day. You are kidding, right? 15 minutes, once a day is plenty. Then there is the old tape recorder in the car while driving to work trick.

>"No loss"? You have no way of knowing this to be the case. It would be "no
>loss" for ham radio to lose that attitude.

Well, after 45 years of observing all of this, I feel I know the case.

>-Michael

>----------

There have been many posts regarding this subject (check with dejanews
or altavista if interested) in the past year (many of them by me).

I have had numerous "altercations" with illegal operators INSIDE the
amateur 10-meter band. These have mainly been commercial fishing
boats on the Pacific Coast, but a few have been "freebanders" without
a clue ("if higher than CB is better, then higher than "freeband" must
be great!" mentality).

There is also another "class" of interloper being caused by places
like Copper Electronics who sell 47 different models of cheap
"amateur" 10 meter transceivers (wink-wink). These are no more than
re-worked CB radios. I have also heard "innocent" people who knew no
better chatting on 10 meters as if on 27Mhz because the "CB" radios
they bought give them channels there (AM mode, no less)!

It isn't too bad NOW, but improving propagation will be like shining a
flashlight in a dark closet full of cockroaches. Hopefully these
"squatters" will all run away and hide too.

> No. It's hard enough just to find a ham on 10 meters (unless theres a
>10-10 contest of course)

I LOVE this statement (and generally concur!).

Thats interesting...you think someone with NO HF experience
and NO license should be allowed to help determine the future
of ham radio...Wow great idea...I know I'll give his every word
the attention it deserves..Ha Ha..
If he had a license his arguments might come from
a position of knowledge and dedication. If he can't even
take the time to study for and pass some very simple
tests, he's not serious about ham radio. If he has an
opinion about lowering the qualifications great....but
as far as being credible, and derived from actual
experience, no I don't think so...The airwaves might
"belong to the public" but you still need a license to
transmit on them. If he is serious, I'm sure alot of hams
would be glad to help him find study aids, testing sites etc.
When he does post a callsign, he will gain a measure
of respect from many on the reflector. Until then he'll
just be someone on the outside looking in...just
a wanabee complaining about how hard it is...
(can someone fill us in, is Amor a YL or OM?)

>guys you are complaining about. Please learn when to use the
>word "who" and when to use the word "that".

Not to be picky, but to be grammatically correct, you shouldn't end a sentence with a preposition (i.e. "about"). Your sentence should have been phrased like this, "...your english is no better than the guys ABOUT WHOM you are complaining."

Sorry, Cecil, but if you're going to pick on a person's english, you'd better make sure yours is correct first. BTW, Cecil, I'm not picking on you, I'm just trying to demonstrate that we must simply "agree to disagree" on some things. Period. If one person says something, there will ALWAYS be an opposing argument/comment that can be made.

Aren't these nit-picky things stupid? We're all supposed to be a community of friendly people with a common bond. That's why I jumped into the hobby. I think we're all losing track of what bonds together us as amateurs. I think we need to stop quibbling over the CODE/NO-CODE argument and start focusing our attentions on advancing the hobby.

I've got my opinion, but I'll agree to disagree.

73, Chad Johnston, KI8CU

I happen to own one of those "amateur 10 meter transceivers" and I do know enough to stay off the 10 meter band. I bought my radio because I like the echo feature. I have it set so that it enhances my audio, not to play games or irritate people. I invite anyone who comes through or lives in the north Minneapolis, MN area to turn there dial to channel 10 and say hello. My handle is Scooter.
Also, I do sometime scan the 10 meter band and I found a radio club that uses 28.350 every Saturday night. I've never heard anyone bother them and I like listening in because it a very pleasant and organized conversation.

> impossible through hard work alone.

I worked for one as an apartmnent manager. I grew up with his sons. He
worked for McDonnell Douglass and never rose higher than lead man (if
that isn't blue collar, I don't know what is). He and his family bought
and owned three apatrment buildings where I lived, he owned his
residence (in a well-to-do part of the town) and also another house and
apartment building.

He sold each of the three ten-unit apartment buildings, alone, for a
half million each, now,

IF THAT DOESN'T MAKE HIM A MILLIONAIRE, YOU'RE TOTALLY CLUELESS.

[totally clueless BS snipped]

> Face it. You don't give a damn what I say, no matter how well-reasoned it is.

I just received a page, and I consider that more important than the crap
you're saying.

I just proved you WRONG. Why, because you're wrong, that's all. Wrong reasoning. You're even afraid to come out and use your real name.

Good bye, Schmuck.

Pete,

I've owned a HTX-202 for a couple of years now, as well as a HTX-212.
I've had no trouble with either. The only problem you might encounter with
the HTX-202 is they're not modifiable. They only receive and xmit within
the 2 mtr Ham band. This makes them more resistant to intermod, but if you
like to listen out of band, or if you want it for CAP/MARS, you need to look
at another radio.

Exactly my point (but its Coke not Beer). But I guess it is reasonable to make the extrapolation that some (note, some not all, and I guarantee the bad are in a small majority, unless all the nice ones live in my home town) have attitude problems.

>Rob KL7NA/W7

Most RFI from power poles is caused by arcing. Current from the arc is
either conducted to ground, or to another phase line. This current adds
to the load at the power plant, but produces no revenue. Lost $$$. The
more astute power companies are very aware that this problem can get out
of control without a regularly scheduled cleaning of the insulators. Some
companies opt instead to simply inspect their lines for arcing, and do
cleanings on an as needed basis. Customer complaints serve to help indentify
these problems as they occur.

I expect the stockholders in your power company would be very interested
to learn how their profits are needlessly going down the toilet. If I
were you, I would offer to provide the local newspapers with information
about how much money is lost due to noisey power lines annually. They
love that kind of stuff. Make sure that the executives at the power
company are aware of your offer, and see if they don't become more
interested in finding a solution to "your little RFI problem".

>
Those of you east of the Rockies or new to HF since 1988 are probably unaware that a similar situation existed during the previous sunspot low around 1986. Taxi cab drives in east Asia took over 10m during that time. The Australians, who still had propagation on 10m to that area were telling us west coast operators that they were every 5KHz in the phone band.

Sure enough, when we got propagation we could hear them every 5 KHz. In about a year they got run off the band. There were *so* many legal operators on with beams and kilowatts that *they* got tired of the interference.

Those of you who have not experienced a sunspot high are going to be amazed at the activity on 10m once the solar flux passes 150.

It's hard to imagine that outbanders will make any inroads above 28.3 MHz. The competition is going to be tough. It's possible we may have to do some policing below 28.3 MHz. We do that now with the South American CBers down there.

It will not work under NT, you need to find a system running WIN95. I've tried this also and experience the same. One earlier post somewhere said if you could change the COM port setting to FIFO enabled OFF that you can make it work but I tried that and ONLY success is with a WIN95 system. Also, I live in Huntsville where they write the ADMS software and have verified this with them.

Rob, I have a simliar problem here the service from the power company really sucks! I complain and have fault for years to just get a little bit of the problem solved. Line Noise is a very very very low priority with the power company (at least here).
Here's some suggestions:

If you want to make the power co. jump called the State Cooperation Commission, these people where GREAT! I got real service then, the power co. even worked on my problem for 4 days in a row, and that was better than there 3 or 4 days a year. It did help with noise but not all, I finally recieved a letter oneday stating that they had done all they could do in locating my noise problem and that noise of this nature could be coming from many different things and for several miles away. It also said that we hams had always to pride in finding cures for such as this and if I could located (pole number) the noise they would look into it further. So what should I do?
I have worked miles and I mean miles trying to located the trouble but I can not afford the right stuff other than walking to each pole. And should I be the one going up to other people houses looking around for noise.
Has anyone sued the power co. before?
Good Luck,
Kyle

Armond,

You are ignoring the simple fact that, while people *have* discretionary
time for hobbies, etc., they often have limited amounts of it, due to
today's fast-paced society. That they are reluctant to waste hundreds of
hours of that time becoming proficient in something that they find boring,
backward, and irrelevant and that they never have any intention of using
(I'm talking about Morse, of course) is NOT an indication that they "wouldn't
have the time to be an amateur.

You're close! Build your fire around the offending poles. Once they burn down and get replaced, the new hardware will be clean and tight....thereby solving the noise problem.

That notwithstanding, the fact that truck drivers have a somewhat important place in the food chain does not, in and of itself, justify their attitude that they are God's gift to humanoid lifeforms. I know that there are good and bad in every profession, but it sure seems to me lately, that the "good buddies" that I've run across, are falling into the latter catergory. Most are rude, crude, obnoxious, disrespectful of women and insist on running those god-awful echo mikes, that so distort their voice, and that between the echo and their make-believe southern drawl, I can hardly understand them. But try to nicely point out these things and they are the first to start making assumptions about our financial status without knowing anything, or other snide comments. We usually end up talking over them (Since they jumped all over our channel without breaking in the first place) but they are usually "bumper humping" each other, and they just continue to talk without a problem. At least they are only in the area for a short time.

: Jeff KH2PZ

Sorry, My fingers get ahead of me sometimes. I meant to type xtian
instead of "xtain." Just incase your one of those fanatics who takes
everything personal and wants to say that it is an insult to say "xmas" or
"xtain" as an abbreviation, I will quote a recent artical I read on this
issue. I do not have the complete source in front of me, so I ask the
authors forgivness for not giving them credit for the research.

The Merriam-Webster (Collegiate, etc.) dictionaries have a section of
Abbreviations, listing Xn (Christian) and Xnty (Christianity).

The American Heritage Dictionary also lists the single letter "X" with
nine symbolisms, the first of which is "a symbol for Christ or Christian".

These are standard usages, and date back to the early days of the
Christian Church (before the Roman Empire was converted), when Greek
rather than Latin was the language of the Church, and the name of Christ
was abbreviated using its first letter in Greek, Chi (shaped like X).

Both the Chi-Rho symbol seen in churches and the "fish" symbol seen on
cars (it dates back to the catacombs) retain this usage of X for Christ.

The "fish" is a rebus or visual pun, since the Greek word for fish,
ichthys
(root of "ichthyology", the study of fish), is taken as standing for the
words Iesos CHristos THeou Yios Soter, Jesus Christ God's Son Savior.

Xmas, Xn, Xnty, are all originally *Christian* abbreviations, not
something
imposed on the Christian majority by some malevolent outside force.

But, I will end this here, as this is the wrong forum for this stuff.

Let's leave it at "Have a great month of December, and enjoy the month
of Janurary as it aproaches also!"

Thanks Robert,

That problem has been driving me nuts. I've had mine about a month and
I too thought it was my nicads. Couldn't put my finger on it but had'nt
gotten all that serious either. I will confirm this and let you know
how it goes.

The power button is also a design flaw in my opinion. Good radio,
stupid design on that feature. I solved that one with some high density
polypropyline foam with adhesive on one side. I didn't use rubber foam
because of the odd odor. Basically cut a 5/8 inch circle and then cut a
1/4 inch hole in the middle of it. Took a little doing with an exacto
knife but I did it. Now, I think I would make an elongated oval say 1.5
inches long with the same 1/4 inch hole near one end and place it over
the power switch. Turns out, if you hold it in your left hand it feels
pretty comfortable. Oh by the way, the foam was about 3/16 inch thick.
In my brief case it kept the power from coming on by being bumped by a
loose object. The only down side is that the adhesive seems to be

letting go of the foam. I'll try another type and let you know. The doughnut like pad seems to have done the trick for now.

Thanks for your posting '73

Roger

In the early days of color TV I worked for a time as a video engineer
at a TV station ran by the US Army Signal Corps School in Fort Monmouth
NJ. During that time I gained an appreciation for good quality TV
picture. At that time I considered the NTSC studio picture to be 'good
quality' and still do. DSS delivers as good quality as I remember the
studio camera video to be at that time. There's only so much you can do
with the 525 line interleaved display, but when it is clean, I am
satisfied with it, I have never been easy to please after the above
quoted job exposure.
However, when I compare my DSS picture with that displayed on this 17
inch .28 pitch computer monitor, I just don't see enough difference that
I would spend big bucks for that difference as displayed on my TV
screen. IMHO only a confirmed video nut would be willing to, given the
small percieved gain in quality, even though there is certainly a
definite advantage in disposing of the 525 line system for those who are
that interested in best quality video. I just don't think the public is
all that interested given the projected cost. Most don't even know there
are 525 lines on their screen.
Also--how about the large-screen projection type sets? Will the same
projection method function on HDTV or will a new scheme be needed if one
doesn't use the NTSC converter? Who wants to be stuck with one of those
that becomes unusable?

While living in Leavenworth, Kansas, I had a similar problem. The power company engineer -- who I had to track down in Kansas City -- was glad to hear from me. His comment was: "It may be noise to you but to me it's power loss. We'll check it out." They fixed it in three days. Several poles had wetehred contacts, and, they replaced some piece of equipment on one of the poles.

I know this doesn't help you much but maybe someone needs to understand that noise to us is power loss to them -- and that's money loss.

I have a Realistic HTX-100 10 m mobile that has a "lag time" between TX and RX. Everytime the mic. is released, a half second pause ensues before anything heard. Otherwise operation is fine. Anybody have any ideas? Thanks.

Tim

John Abernethy, K4OKA, is to be pitied more than anything
else. At 75 years old and just having lost his spouse, his
life is unmanageable. He is finding relief at the bottom of
a Lord Calvert bottle and in running up and down 75 meters
being as obnoxious as he possibly can.
If his web page is to be his final statement in this life, then it
speaks for itself.
If W4WKS and WD4JYZ were real friends, they would tell
Al the truth about himself.
For someone who was a high school math teacher at one
time, it shows how far down a person can slip. But then,
the infamous "Big Al" was always pretty much the way you
see him today. What you see is what you get.
Even the infamous KV4FZ and the even more infamous
stumpjumpers will not tell Al the truth about himself.
Drink up Al, for this one could be your last. Then we'll
all tune to your web page, have one more big laugh about
old "Big Al" and promptly act like you never existed!

Jeff

I have a GAP Challenger DX-VIII and it works quite well. I think its best bands are 40 and 20 meters, but it also works well on 15, although I just have not used it enough there to really make a good comparison. Maybe, now that the sunspots are coming back.... :-)

It will work Europe on 80, but not as well as my inverted V [apex at 50', end fed].

I bought mine used and have had it up since `93 with no failures. I'd buy it again.

I have also used it on 6 meters with good results, but it's my only 6 meter antenna so I have nothing to compare it with there.....

>> >milk.)

Some comments on QEX - The magazine has only recently been publicized
via the league journal, QST. Only in the last few months have they
consistently
published a "this month in QEX..." type of column, and I was always
surprised
before when this was not done. Hopefully they will continue this and it
will
generate more interest in QEX.

The mag was "down" for about 6 months earlier this year, and starting
with the January 1998 issue, will be every other month, but supposedly
with twice the pages (same number of articles per year...). Hopefully
this will be maintained or the already small audience will dwindle even
further (see below).

I happen to have the November 1997 issue in front of me, and on page 30
there is the statement of ownership, management, and circulation. From
that, I see that the total distribution for the previous month was only
5670 copies! Is this low number indicative of the number of hams that
are interested in this level of article, or is related to the lack of

publicity
of the magazine, or even the extra cost? I have no idea, but it does seem
rather low to me.

For those here who have mentioned that they haven't seen QEX, I have
a couple of my articles posted on my website. I won't vouch for how
much they represent the level of material in QEX, but they are certainly not
the typical QST article... http://members.aol.com/johnw39038/index.htm

Well, here are just a few:

W.J Shaw, TWX
H. Hillesdey, HHX
J.E. Nickless, NXC
George Robertson Marsh, NXT
Arthur F. Carter, IRX
Claude Willcox, WUX
G.G. Blake, BOX
J.M.C. Dennis DNX,
Philip R. Coursey, GYX
B. Hippersley, HLX
Noel H. Hamilton, IXY
Howard Littley, LBX and LSX
John Scott Taggart, LUX
A.T. Lee, LYX
Leslie McMichael, MXA
H.W. Pope, PZX
Rene Klein, RKX
Gilbert W. Tonkin, TBX
W.J. Shaw, TWX
W.K. Alford, TXK
A.L. Megson, UAX
H.S. Walker, WBX
Mrs. C.E. Ingram IXI
Leslie McMichael MXA

That's all I can remember. (It's no coincidence that all the callsigns
contain the letter X).

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services.

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

Lots of good comments on the Autoshare software we're now using for the Newsletter.
It makes signing up for the Newsletter a snap! Hopefully, you've recieved the updated FAQ we mailed last week. Hang onto it, as it mentions how to subscribe/unsubscribe.
If by chance you didnt receive it, contact us and we'll get a copy out to you.
ALSO: if your email address is with JUNO.COM, you may not be receiving the newsletters all of the time. Apparently JUNO.COM recognizes multiple copies of the same message as Spam and will attempt to bounce it. I've contacted JUNO.COM to see if the problem is fixable, but they haven't returned with an answer. Stay tuned...
...
>From the mailbag:

New Subscribers --
From: Patrick Moffett <PMoffett@EMEIAQ.COM> Huntington Beach, CA
I am an industrial hygienist, biological hazmat specialist, Cal/EPA registered environmental assessor, and state licensed general contractor in California. I am employed by Environmental Management & Engineering, Inc., 5242 Bolsa Avenue, Suite #1, Huntington Beach, CA 92649.

EME is an environmental mitigation assessor/contractor who is retained by insurance companies, risk managers, state and federal agencies to assess damage caused to buildings. Often the problems cause the occupants to become sick and ill. Many of the projects the company specializes in are improper use of pesticides and methods to remediate the contaminates by, to issues involving toxins, chemicals, biological to assessing unknown contaminates.

My particular specialty involves biological identification and remediation, where schools, laboratories, businesses, hospitals and industry are effected by molds (from rains, flooding, and wood-rot), to bacteria (from Legionella, sewage, Hanta Virus, TB, and other pathogens).

Our company is often called to follow up after fire departments and other disaster management specialists in the further identification of low-level chemicals and toxins, along with team managing for the customer the next steps required before or during cleanup.

We have one disaster team that travels across the US and one who stays in California.

My desire is to communicate with OES and become more familiar with their programs over time.

From: Fred Vincent <fvincent.des@state.va.us> Richmond, VA

I am the Deputy Operations Director for the Virginia Department of Emergency Services, the state emergency management agency for Virginia. I have direct responsibility for the operation of the State EOC which includes both the operations center and staff plus the warning and communications center and staff. I am a member of the Virginia Chapter of APCO (past president 1995) and a member of the Emergency Management Committee for APCO Intl.
...
From: James P. Ley, NX9F <ley@uwstout.edu> Menomonie, Wisconsin
I'm the Dunn County ARES Emergency Coordinator. We mainly do SkyWarn and have been lucky not to have had to handle major disasters lately. We do have 2m ham radios at the 9-1-1 center and the Red Cross office.
...
Current Events:

From: Scott Samuels <srdr@NEWNORTH.NET>

Good Afternoon. I just wanted to present a short update on the SR/DR '98 (search &
rescue/disaster response) Conference and Expo. We return to the Nashville Convention
Center June 25-28.
The educational tracks are confirmed. We will have about 75 sessions and pre-conference workshops within the following areas:
* Collapsed Structure Rescue
* Trench/Confined Space Rescue
* Terrorism Response (new for 98)
* Haz Mat Disaster Response (new for 98)
* Canine SAR
* Water/Ice Rescue and Recovery
* High Angle / Technical Rescue
* EMS
* Auto Extrication / MVA Response

NEW FOR 98:

1. The Tennessee Valley Auto Extrication Competition will take place indoors in the exhibit area.
2. Complimentary food/beverage in the exhibit area whenever the exhibits are open.
3. CEU's awarded and certificates given to attendees upon their completion of specified sessions.
4. One and two day pre-conference workshops. Five topics thus far: Terrorism Response and Management, Haz Mat Disaster Response, Collapsed Structure (the class will actually collapsed a house - I hope they notify the people living there), trench Rescue, school bus rescue.

The live demonstrations that took place in the exhibit hall last Summer are all
returning - except the auto extrication. This is being replaced by the extrication
competition.

The exhibitor prospectus has already gone out. If you would like to have one sent to
you, please let us know.

The attendee brochure goes out in early February. Let us know if you would like to be
on the mailing list.

Have a great weekend;

Scott Samuels

FEMA SAYS GIVE THE GIFT OF DISASTER SAFETY THIS YEAR

WASHINGTON December 1, 1997 - The holidays are coming and it's time to draw up gift lists for loved ones. What do you give the person who has everything? How about safety? Even the person with everything probably doesn't have a family preparedness kit and important supplies necessary in case a disaster strikes in 1998. While not your traditional gifts, these items can make a huge difference in the year ahead -- while also showing how much you care.

Officials at the Federal Emergency Management Agency remind holiday shoppers that every year, hundreds of thousands of Americans are forced to deal with natural disasters that wreck havoc with lives, families and communities. Thinking ahead and being prepared can do much to reduce or prevent the tremendous heartache and financial hardship of these disasters.

"While FEMA is not trying to replace Santa Claus, we are in the business of helping people be prepared. The holidays are a great time to give an important, inexpensive gift that helps people prepare for disasters and to reduce their risk," said FEMA Director James Lee Witt. "These suggested gifts are a wonderful way of making 1998 a safer year for everyone."

Suggested disaster-ready gifts include:

* A smoke detector with extra batteries
* Household fire extinguishers for kitchen and all bedrooms (5 pound, A-B-C type)
* A foldable ladder for evacuation of a second story in a fire
* A heavy duty flashlight with extra batteries and a battery-powered lamp
* A first aid kit
* A battery powered radio with extra batteries
* A NOAA Weather Radio with a battery backup and tone-alert feature to receive weather alerts
* A sturdy plastic tub filled with bottled water and non-perishable, high energy food and canned goods
* A camp stove or canned heat stove, with extra fuel
* A year-long policy for National Flood Insurance, available from your insurance agent
* Hurricane shutters or cut-to-order marine plywood and heavy nails
* A winter car kit that includes emergency flares, shovel, windshield scraper, battery-powered radio, flashlight, water, snacks, tow chain or rope, tire chains and fluorescent distress flag
* If you live in a wildfire area, give the gift of a gardener to cut back combustible plants and vegetation from around the house.

PTSD on LISTSERV@MAELSTROM.STJOHNS.EDU

(PTSD@MAELSTROM.STJOHNS.EDU) is a support and discussion list
for ALL people with disabilities (PwD) who have or think they may have
Post Traumatic Stress Disorder (PTSD), their family, their friends and
professionals. Our study indicates that a high percentage of PwD also
have diagnosed or undiagnosed PTSD. We consider this to be important
since, those with PTSD can have serious problems with interpersonal
relationships which affect education, employment and their daily
activities.

The PTSD mailing list is for discussions of all aspects of daily life or

other activiries as they are affected by the PTSD of one or more family
members. The PTSD list welcomes discussions of any topic directly
related to how PTSD has, is or will be affecting your relationships with
others. All family members, friends and professionals are invited to
join including spouses, parents, children and friends of an individual
with PTSD, as well as any person with PTSD.
Archives of PTSD mail items are kept in monthly files.

EMCOMM Bulletin:
EMC109 What type emergency? For release 12/8/97

Query: "What type of COMMUNICATION emergency would be declared
for the activation of the RACES (Radio Amateur Civil Emergency
Service)?"

Response: The situation is the same for any unit supplying
emergency communications, not just the RACES, so let's talk in
generic terms of EMCOM (emergency communication) units, whether
the Auxiliary Communications Service (ACS), RACES, or others:

A. A "declared emergency" IS NOT NEEDED to activate an EMCOM unit unless there is a state or local law that specifically requires that there be a declaration. There may be a few jurisdictions where this may apply, but by-and-large it does not.

B. "Activation" can be a phone call to the Radio Officer as a 'heads-up'; or as a "come on in just-in-case", or "we'd sure appreciate your joining us at the meeting today." It does NOT have to be a "call out the troops!"

C. A "COMMUNICATIONS" emergency does not need to exist first. EMCOM unit personnel have never required a "COMMUNICATIONS" emergency, although one may exist to a degree. However, if there FIRST had to be a full-blown communications emergency the agency may not be able to reach its unit's people. In fact, in one incident in which the agency waited too long they had to send their sheriff's deputies out by car to get their EMCOM people!

D. The EMCOM unit can be utilized anytime the agency decides to do so unless a state law specifies otherwise. See "A" & "G".

E. A prudent AGENCY official will notify at least the Radio Officer in ANY situation that any other response official is notified, even those situations where there is not yet a threat. Consider a hazmat spill. Many such reports are benign, but they can easily escalate into a major event explosively.

F. Skywarn is an example of a use before an emergency. A tornado (or hurricane) may or may not become an emergency. While Skywarn is usually a stand-alone service, if a local jurisdiction wanted to include it as an EMCOM function, why should it be necessary to wait for the damage to start? It would not make sense. We use this to illustrate the fact that it's not necessary for the emergency to be in effect. A tornado or hurricane is potentially devastating. In yet another instance, should the community that is alerted for a possible flood wait until the levee breaks to call out its EMCOM unit? That wouldn't serve the possible need, would it?

G. An aspect that some Amateur Radio Service licensees overlook is that there is a major difference in activating (involving) a unit, and operations ON the Amateur Frequencies. Some people seem to equate the two as one. FCC regulations only apply to actual usage of the Amateur frequencies - NOT to any other aspect of the units operations. While it MAY be that there will be a need to use the Amateur frequencies, it MAY be the unit personnel can provide better service using agency radios. More and more units are converting to the broader application of full support of ALL forms of Public Safety SYSTEMS (radio, cell, satellite, microwave, computer networks, etc.) and in the process, discovering a vastly

rewarding involvement!

John,

I bought the 1970-1974 CDs and in my opinion they leaves a lot to be
desired.

If you want to search for an article you must have the complete title.
I was not successful trying to search for an article using a phrase or
key words.

I am still undecided if I will purchase more of these CDs. Maybe if I
try using the CDs I have I will get ticked off and decide not to buy
more of them. Right now they are just sitting on the desk. I was not
happy with them when I tried using them and haven't touched them again
(there were 3 CDs in the CD case for 1970-1974.)

Gary Coffman disagreed and said:

> The FCC seems to think it is. That's exactly how they specify it in Part 15.
> Anyone competent to design this device will know how to meet Part 15
> standards.

Sorry Gary, but that is not "exactly how they specify it in Part 15".
I just searched my copy of Part 15, and the FCC, when talking about field
strength, always specifies "microvolts per meter" (uV/M), not simple
"microvolts" (uV).

"250uv at 3 meters" is ambiguous and does not constitute a "specification"
that any competent engineer or technician could interpret as a
design criteria. (Yes, they would perhaps "guess" the author meant
"uV/M", but that does not validate the poor specsmanship of the original
author.)

It's a gove and take, If we all decided to give up beer, beer truck
drivers would be out of work.
We lived a long time in this country without auto's and could do so
again.
Would it be inconvenient?....absolutely!

HamComm, by DL5YEC should fit. I know it does RTTY and I think it does CW. I haven't run it for a long time now. You can find it on Ham BBS's and various web sites.

John,

This sounds good to me since there now seems to be a good amount of hams who have internet access. As you say, the security question needs to be

worked out, but something you did not is acceptance of the Virtual QSL by the ARRL or other award sactioning organizations. I remember several years ago a discussion of the use of E-Mail for confirmation of contacts for operating awards, but I am not familiar with the outcome.

>still using B/W scanning methods?

About the only color in these old magazines was in the ads, so it is no great loss that they were scanned in b&w. Scanning them in b&w also allows more issues to be put on a CD. That saves money and space. The fact that they *are* scanned is a pain, but the ARRL decided it wasn't cost effective to convert them to a searchable format. The 1995 and 1996 issues are in searchable form, though the access program for the 96 CD is much better than the one used for the 95 CD (it's the same as is used for the CD Handbook).

What gripes me is that they are Windows specific. I would have been much happier if they had chosen a platform independent format. The older issues could have been done in PDF, and the newer ones in HTML. That would have made them accessable by any computer with a browser, regardless of the underlying OS, and trivially accessable over a network.

These CDs will probably become useless when the next generation Microsoft OS hits the streets (MS says it won't be backwards compatible), and they *are* useless to anyone not currently running Windows. So it might pay to hang onto those paper copies a while longer.

This *may* be planned obsolescence so that the ARRL can sell you another set of CDs when the next OS hits the streets. But I doubt the ARRL thinks that far ahead.

>whats a lid????

It is telegrapher's slang for a poor operator. The term originated to refer to operators who placed a tobacco can lid on the sounder so that the click-clack became more distinctive and made copying American Morse easier than with the bare sounder. This was actually a primitive form of signal processing, and probably marked the beginning of the schism between the technologist and the telegrapher.

Article Reprint from August 97 Monitoring Times Page 72
"The World of Ham Radio"
A Gem of a CD
Ike Kerschner, N3IK

Have you ever stumbled onto something truly valuable? Remember the surprise, the thrill? You can experience that same feeling when you examine a copy of the CD-ROM software by AMSOFT called "The World of Ham Radio"! This is one of the best bargains I have laid my hands on in a long time.

This CD has been around for a few years, and I have seen it for sale at several hamfests. Several years ago I looked at it and felt the CD provided a decent call book with some nice software.

The latest copy, however, knocked me over! I held a copy of it for several weeks before giving it the once over, but after I started I couldn't stop. Programs that I had on separate disks were available to me in one location with an excellent menu, and moreover, they would run directly from the CD. For many years I have collected shareware at the price of 2 to 6 bucks a disk, finding many I liked but a lot more that were just ho-bum. If I were to add up the cash laid out to come up with a handful of decent programs I am sure it would be several hundred dollars.

"The World of Harm Radio" is a collection of excellent software, in fact, almost all of the programs I have chosen over the years as being the best are on this CD, plus a lot more, to boot. All of this and a call book, too! Looking up a call is a snap in AMSOFT's "World of Ham Radio." But, let me give you a brief tour of what else is on this CD.

When you type CDVIEW, a listing of many different subjects is presented to you. Choose "Antennas," for example, and you will find 26 different antenna programs that will provide full information on a host of antennas, from simple long wires to yagi and complex loop antennas.

"Basic programs" are a wide range of simple programs written in BASIC which will run directly from the CD. Examples of the Basic listings vary from antennas to z calculations.

Twenty-six different programs deal with Morse code - from learning programs to programs that will allow you to send Morse from your computer keyboard as well as copy code via the computer and shack receiver.

A variety of engineering programs are included, among which are a a simple-to-use CAD program for drawing schematics, a program to lay out PC boards, and tools for designing specific circuits.

Eight different logging programs give you anything you want for contest logging, general logging, and certificate hunting.

One program I particularly like is a training manual for the oscilloscope. As you go through the Oscope manual the computer shows demonstrations of what will appear on the screen of your oscilloscope under different testing situations. Last Christmas a good friend wanted more info on using an oscilloscope and we spent several weekends going over the use of the instrument in my shack. If we had this program, I am sure my friend would have learned a lot more a lot faster.

Equipment modifications also are included on the "World of Ham Radio" CD. I examined all of the mods available on the CD and am anxious to try several, especially one for a scanner I have. Not every piece of equipment is covered, but there is a lot!

Eight propagation programs allow user to determine the best time and frequency to work various parts of the world.

Included are 36 packet programs from very simple to very elaborate terminal programs, information on using packet, and circuits for various packet projects. If you ever wanted to try RTTY, 10 programs on this CD will let you get your feet wet in this interesting mode with minimum outlay.

A very interesting listing for satellite comm- unications provides info on operating and tracking programs, again from simple to fairly complex. There are several programs for SSTV and WEFAX that I am just now beginning to explore.

As always, there is a "Miscellaneous" listing containing 89 programs which I have only begun to explore. There is also a question and answer section that deals with many subjects, Scanner buffs and SWLs will find a lot of good information on this CD: frequency lists, data bases, modifications, and more.

In short, "The World of Ham Radio" gives you hundreds,
if not thousands of dollars worth of information on ham radio,
and all at a price of $29! If you have a CD drive on your
computer, grab a copy ASAP. If you don't have a drive,
consider putting one on your machine just so you can
use this super CD.

Ike Kerschner, N3IK

rogerd@chisp.net writes:
>The power button is also a design flaw in my opinion. Good radio,
>stupid design on that feature.

Is this the original power button, or the shorter one? Yaesu now has
a newer button that's about 1 mm shorter than the original. As a result,
it doesn't stick out beyond the case, and it is harder to turn the radio
on by accident. I bought one and installed it myself - cost less than
a dollar.

Even though pressing against a flat surface in just the right way will
no longer turn on the radio, you can still get it to power on by having
a curved or pointed object hit the radio in just the right place.
So putting the radio in a briefcase with other loose objects is likely
to remain a problem.

Greetings. This is a shameless promotion for my collector's guide to Heathkit amateur radio products. There's still time to get one for Christmas...
-- Chuck, WA7ZZE

Heathkit: A Guide to the Amateur Radio Products

Reviewed: March, 1996, QST magazine.
Reviewed: Febuary, 1996, Antique Radio Classified.

This is the definitive work on the Heath company, and a "must have" for collectors and anyone interested in Heathkits or vintage radio. The 250 page book contains:

* a brief history of the company and its product development track.
* a cross-referenced index to more than 160 products.
* a comprehensive reference section to reviews, modifications, and articles found in QST and CQ magazine.
* a product-by-product description and large, high-quality black and white photographs of every amateur radio product the company made from 1947 to 1991.

In researching the book, the author interviewed more than a dozen former employees and many of the engineers who designed and built the now classic Heath ham equipment.

$24.95 plus $3 shipping and handling.

Thanks!

Roy Lewallen, W7EL

Dear Sir:

The Agusan Radio Club Incorporated of Butuan City, Philippines has bought a Repeater Controller made by Advanced Computer Controls Inc. of the United States. We tried to contact the manufacturer because we had some problems with it but unfortunately, the no. in their manual now belongs to another company ansd we do not know how to contact this company.

We read your email address in the CQ Magazine and would like to ask you a favour if you cna help us locate this company and give us their complete address with their respective phone numbers. Any assistance would be highly appreciated by all our club members.

Thank you for your kind attention and may we look forward to hearing your good news.

Hmmm. The last time I checked I do believe that code IS
something you need to operate HF. So, for the time being,
you DO need to learn the code...

As Nike says, " Just do it."

>Also running about 8,000 illegal watts

Then you must mean the total power output is 9,500 watts. Or, "about" that many. Please enlighten as to your method of determining "about" how much power someone is using.

> intentional interfering with others'
>transmissions. Is this your idea of a "master communicator?"

Oh, how much safer the world would be if you were a licensed radio cop. I'd sure sleep better knowing your sense of righteousenss and your ability to define the intentions of others were protecting the poor and downtrodden on 75 from intentional interference of their important transmissions.

But hey, let's not just dream about it. Why don't you just face this critical problem like a man. Get on 3894.5 and lay down the law.

It's here Ladies & Gentleman! The one-of-a-kind webpage from the greatest person to ever key a microphone on the 75 Meter Amateur radio band....

The K4OKA Web Page !

You will find here up to the minute hard copy about your favorite radio characters from 75 Meters, Artistic expression worthy of the late Pablo Picasso, and a nice background .WAV file while your perusing the best web site this side of 3894.5!

it's here----> http://www.angelfire.com/nc/k4oka/

You will love it as much as we SWL's love to listen to the Great White Father of 75 ham radio! Ho Ho Ho Ho

No squelch, I'm in the habit of leaving it all the way open. (sidebander habit, I guess) I think the problem is in the tx/rx switching, but I'm not 'up' on that circuit. I note that there's no relay in these modern rigs---!? so must be switched by trx or diode?

Christmas is an ancient Sun worshippers holiday, adopted by the church as a means of attracting converts and their money. Jesus' birthday is stated nowhere in the bible, but is believed to actually lie somewhere in the autumn season. Merry Saturnalia. Let us greet the return of the Sun.

Do you already have an HF radio on board (I hope)? If so, then look for JVFAX.
It is a shareware program with a simple interface to a PC.

It would be refreshing to have these code/no code people stay the hell out of subjects that have nothing to do with their argument.
The topic at hand here is about Big Al & friends on 3894.5.

Do-gooders have been whining about 75 meter operators for longer than most cyber-communicators have been on the planet. For those who may not know, 75 meters is a band noted for good reliability in regional communications. It is a great big meeting hall where different groups usually consisting of like-minded individuals stake out a section of the room and pursue their interests often in a rowdy fashion because of close friendships and/or the informal operating habits of the band.

There always has and always will be those who are most comfortable hearing lame, predictable transmissions from hams with no fire in their belly, no pulse, no passion and nothing to say that could possibly offend. If you have delicate sensibilities, 75 is not the band for you. Just as some broadcast tv or radio selections may not be to your taste. The answer is of course, keep on tuning.

I for one find most amateur communications to be dreadfully boring. And I find complainersare often one-dimensional and without a sense of humor. Lighten up and take in the show. Don't you know a lot of these guys are as good at acting as they are at putting out big signals?

I am not a member of K4OKA's gang and in fact have had many confrontations with him going back decades. But this guy is a communicator, a master manipulator, a colorful personality. Nuts, too.

If your idea of ham radio is making every band as lame as 2 meters, you'll need to put a stop to radio crime. Put together a possee and ride on in to 75.

In the PCS service, the frequency that the operator runs his service
on is his own frequency. The FCC autioned off over 5 Billion dollars
worth of frequencies about two years ago for paging, PCS, mobile
telecommunications. Companies such as Pagenet, Mtel, AT&T and others
purchased blocks of frequencies. It was the first time the FCC ever

did such a thing. Will they ever do it again is uncertain. It did allow the government to spend more money.

Regards
James

A wise man knows that he is not all knowing. Only a fool thinks he is!

some people do spend lots of time on technical or machinary nature...
not simple morse.

> 4 months later I'm
>Advanced and when I started I didn't even know how to send SOS.

> Being in
>Amateur radio is knowing code not complaining about code.

Many coders (and no-coders of course !!) are now suggesting to
provide the alternate way of exam such as practical or machinary
nature. As I have written before, not knowing how the packet works
is no better than not knowing the code. Not knowing how the power
supply works is no better than not knowing the code. Period.

> To the people
>that are satisfied with being a no-code technician the following does
>not apply.

>This is for all the complainers out there.

> If you would put as much
>effort into learning CW as you did in complaining about it you all would
>be over 35 wpm in less than 1 month. Application is everything in
>teaching ones self anything.

We DO have codes. Many of us are coders who are against the
requirement of CW (not totally, but why morse takes care of all the HF
bands ??) instead, we suggest the practical exam.

>I also have a friend that went from tech plus to extra in 5 months he
>first received his license july 19 1997 and today he received his extra
>class license, amazing what application and self driven attitudes do for
>a person. My hats off to the man.

I did my code receiving practise in a day (all day) and I passed the 5
WPM test on the same day. What a surprise.

>Learn code or be satisfied with where your at DON'T bitch and complain
>to the people

listen to us !! we are the coders !! the coders disagree with
the code requirements.

>GET IT OR GET OUT.

and this is a typical pro-coder's attitude toward ham radio (or toward
other people shall I say). This is the real problem in ham radio
nowadays.

Homebrew

Hi all,

It has been a few weeks since I posted anything to the group, but in case you do not know, I have put a few circuits on my homepage. The latest was the G8TGL Terminal Unit which was originally designed to power an old teleprinter. It worked well on the HF bands although it needed a good filter (or a strong RTTY signal).

There have been loads of comments about the transmitters, but surprisingly, the BUG FM transmitter is still the most popular of the circuits!! Isn't it funny how amateurs like to play!!

I am still working on my all valve General Coverage receiver but the last two bands are a bit slow. I have been abroad a couple of times and don't seem to have much time.

Anyway, the URL (the new abbreviated URL) is:

http://come.to/sm0vpo

It is easier to pronounce on HF SSB.

Hope you have some fun with my circuits. Best regards and Merry Christmas. Regards Harry, SM0VPO (ex G4VVJ / G8TGL)

>
>"Oh well," right??

I have to say that if I do not like something I am listening
to then I found a wonderful device called the VFO....just spin it a
little and the frequency will change.
I personally enjoy listening to the trash on 75/80 at night
and find it quite humorous. Whenever I get tired of it I just turn
the vfo.
Don't waste time complaining about 75/80 meters because YOU
CAN NOT DO ANYTHING ABOUT IT!
It has also been my experience that ALOT of people get on here
and complain about the filthy language on the lower bands and they are
the same ones trying to jam the ones using the filthy language. Go
figure. This world is full of HIPPOCRITES!!

So what are you complaining about? How much easier can it be
to pass the 20 or 13? One does not even have to do solid copy
now...just multiple choice questions for the cw???
anyone who can't pass the code with the previous paragraph in
mind (excluding a REAL handicapped individual), does not deserve to be
extra, general, etc.

From: Skip <longbeard@cybernet1.com>
Message-ID: <348FA916.8F3@cybernet1.com>
Source record: 184653

DO YOU WANT TO MAKE BUCKS FAST???--AND NO ONE LOSES . . .
Of course you do, we all do !!! Here's how to do so with little effort, and,
yes IT'S LEGAL.

Some people make things happen
Some watch things happen
While others wonder what has happened

This is the easiest way that you can make a buck. Think how excited you'll be
to open up your mailbox day after day! Will it be $50 in dollar bills? or
$5,000? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY!!! (I'm glad I didn't)

Like you're doing now, I was checking out newsgroups and came across an article
similar to this that said you could make thousands of dollars within weeks,
with only an initial investment of $6.00! So I thought, "Yeah, right, this must
be a scam!", but, like most of us, I was curious; I kept reading.

Anyway, it said that if you send $1.00 to each of the 6 names and addresses
stated in the article, you could make thousands in a very short period of time.
You then place your own name and address at the bottom of the list at #6, and
post the article to at least 200 newsgroups.(There are about 22,000.)

No catch, that was it. After thinking much about it, I came to the conclusion
that this could not be a scam (but, if it was, only scamed out of $6 , I could
afford it.)

Even though the investment was a measly $6, I had three questions that needed
to be answered before I could get involved in this sort of thing. Just like
you, I was skeptical, or thought it might take too much work or something.

1. Is this really legal? . . . I called a lawyer first. This lawyer friend was a little unbelieving that I would actually make any money but he said it WAS LEGAL if I wanted to try it. I told him it sounded a lot like a chain letter but the details of the system (SEE BELOW) actually made it a legitimate legal business.

2. Would the Post Office be ok with this . . . I called them: 1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See Title 18,h sections 1302 NS 1341 of Postal Lottery Laws). This clarifies the program of collecting names and addresses for a mailing list.

3. Is this moral? Well, everyone who sends me a buck has a good chance of getting A LOT of money . . . a much better chance than buying a lottery ticket!!! In the end it looks to me like no one loses, we help each other move ahead.

So, having these questions answered, I invested EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps . . . and boy am I glad I did !!!

Within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just continued coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had a mad total of $1,000.00 !!!!! In the third week I had over $10,000.00 and it was still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in . . . It's certainly worth $6.00 and 6 stamps !!!

So now I'm reposting this so I can make even more money! (and helping you to make a lot of money.) The *ONLY* thing stopping *ANYONE* from increasing their own bank account is pure laziness ! It took me all of 5 MINUTES to print this out, follow the directions, and begin posting to newsgroups. It took me a mere 45 minutes to post to over 200 newsgroups. And for this GRAND TOTAL investment

of $7.92 (US) and under ONE HOUR of my time, I have reaped an incredible amount
of money --like nothing I've ever even heard of anywhere before !
Enough said,
time to start !

Let me tell you HOW this works, and most importantly, WHY it works. Also, make
sure you print a copy of this article now, so you can get the information off
of it when you need it. The process is very simple and consists of THREE easy
steps:
STEP 1--Send the 6 people on the list a single dollar each.
STEP 2--Put your name and address on the list in position 6.
STEP 3--Post this amended letter to 200 (or more!) Newsgroups.

============
HOW IT WORKS
============

STEP 1:

Get 6 separate pieces of paper and write the following on each piece of paper:

PLEASE ADD ME TO YOUR MAILING LIST.
$1 US DOLLAR PROCESSING FEE IS INCLUDED.

(This is the key as this is what makes it legal since you are paying for and
later offering a service.)

Now get 6 $1.00 bills and place ONE bill inside EACH of the 6 pieces of paper
so the bill will not be seen through the envelope to prevent theft/robbery.
Then, place one paper in each of the 6 envelopes and seal them. You should now
have 6 sealed envelopes, each with a piece of paper stating the above phrase
and a U.S. $1.00 bill. Now send to:

#1
Andrew Wiggin
PO BOX 424
East Setauket, NY 11733

#2
Ashle
347 Jamboree
Manchester, MO 63021

#3
The Mom
4464 Castelar Street, #320
San Diego, CA 92107

#4
Chris Watson
1138 Indian Road
Virginia Beach, VA 23451

#5
Virgil
3538 West 12th Street
Trainer, PA 19061-5301

#6
Skip Leininger
643 Porter Hill Road
Stevensville, MT 59870

STEP 2: Now delete name #1, move the other names up (6 becomes 5, 5 becomes 4,
etc...) and add YOUR name as number 6 on the list. (If you want to remain
anonymous, put a nickname, but the address MUST be correct, or you won't
receive your dollars in the mail.)

STEP 3: Now post your amended article to at least 200 newsgroups. Remember, 200
postings is just a guideline. The more you post, the more money you make! As
you might know, it's not that difficult to post to news groups. So, you don't
know HOW to post in the news groups? Well, do exactly the following:

HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

Highlight and COPY(Ctrl-C) the text of this posted message and PASTE(Ctrl-V) it
into a plain text editor (like Wordpad or WordPerfect) and save it. After you
have made the necessary changes that are stated above, simply select a
newsgroup then COPY(Ctrl-C) and PASTE(Ctrl-V) the text into the message
composition window of the newsgroup, and post it!

GENERAL NOTES ON POSTING: A nice page where you'll find all the newsgroups if
you want help is http://www.liszt.com/ (When you go to the home page, click on
the link 'Newsgroup Directory'). But I don't think you'll have any problem
posting because it's very easy once you've found the newsgroups. All these web

browsers are similar. It doesn't matter which one you have (But it makes it
very easy if you have Netscape Navigator 3.0 or later. You may download it from
the Internet if you don't have it.) You just have to remember the basic steps,
stated below.

BASIC STEPS FOR POSTING:
1. Find a newsgroup and you click on it.
2. You click on 'POST AN/NEW ARTICLE' or 'TO NEWS' or anything else similar to
these.
3. You type your flashy headline in the subject box.
4. Now, either you attach the file containing your amended letter, or you PASTE
the letter.(You have to COPY it from the text editor, of course, from before.)
5. Finally, you click on 'SEND' or 'POST' or 'OK', whatever is there.

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT
YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within day's!
You may eventually want to rent a P.O. Box due to the large amount of mail you
receive. If you wish to stay anonymous, you can invent a name to use, as long
as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

==========
Now the WHY part:
==========
Out of 200 postings, say I receive only 5 replies (a very low example). So then
I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who
just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and
only 5 persons respond to each of the original 5, that is another $25.00 for
me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5
replies each, I will bring in an additional $125.00! Now, those 125 persons
turn around and post the MINIMUM 200 with my name at #3 and only receive 5

replies each, I will make an additional $626.00! OK, now here is the fun part,
each of those 625 persons post a MINIMUM 200 letters with my name at #2 and
they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125
persons will all deliver this message to 200 newsgroups with my name at #1 and
if still 5 persons per 200 newsgroups react I will receive $15,625.00! With a
original investment of only $6.00! AMAZING! And as I said 5 responses is
actually VERY LOW! Average is probable 20 to 30!

So lets put those figures at just 15 responses you get. Here is what you will
make:

at #6 $15.00

at #5 $225.00

at #4 $3,375.00

at #3 $50,625.00

at #2 $759,375.00

at #1 $11,390,625.00

When your name is no longer on the list, you just take the latest posting in
the newsgroups, and send out another $6.00 to names on the list, putting your
name at number 6 again. And start posting again. The thing to remember is, do
you realize that thousands of people all over the world are joining the
internet and reading these articles everyday, JUST LIKE YOU are now!! So can
you afford $6.00 and see if it really works?? I think so...

People have said, "what if the plan is played out and no one sends you the
money? So what! What are the chances of that happening when there are tons of
new honest users and new honest people who are joining the internet and
newsgroups everyday and are willing to give it a try? Estimates are at 20,000
to 50,000 new users, every day, with thousands of those joining the actual
internet. Remember, play FAIRLY and HONESTLY and this will work. We all just
have to be honest and help each other get ahead.

REMEMBER-HONESTY IS THE BEST POLICY. WHAT ARE 6 DOLLARS TO YOU? YOU
DON'T NEED
TO CHEAT THIS IDEA TO MAKE MONEY!!! IF YOU NEEDTHE $6, I'M SURE ANY OF
THE
PEOPLE ON THE LIST AHEAD OF YOU WOULD SEND YOU $6 IN DOLLAR BILLS TO GET
GOING--YOU HAVE NOTHING TO LOSE !!

** We will monitor the program and if we find you have cheated by not
sending
your money to your five recipients, we will just dump you out of the
system.
Come on folks, let's work together and make this work for everyone.

GOOD LUCK to all and please play fairly and reap the huge rewards from
this,
which is tons of extra CASH.

Please remember to declare your extra income. Thanks once again...

I don't have any experience with that radio, but that problem
is very characteristic of a lot of Radio Shack radios. I know
their 2m/440 handheld ham radios have the same problem,
dead audio for a good 1/2 sec after you release the PTT.
Chances are, there's nothing you can do about it. It
doesn't sound defective to me, it just sounds like a RS rig.

> Exactly what other religions celebrate Xmass around the world??

REPLY...

I said "Christmas is celebrated by hundreds of millions of people
around the world, from many different religions..."

I did not say that other religions celebrate Christmas, only that many
people around the world, including many people from different religions,
celebrate Christmas (in one way or another).

Not all people celebrate Christmas because of its religious roots.
Some celebrate it because it is a holiday, or a day off work, or they
just like the music. Heck, some people celebrate it just because they
hope that somebody will buy them a new radio toy.

Whatever the reason they celebrate it, it is certainly not wrong to
wish them a merry Christmas (whatever it means to them).

REPLY...

I noticed that you conveniently left out the last part of my argument - "that code is a waste of precious time, especially when it serves so little real purpose. Compared to the many other things in most people's lives, code is rather irrelevant."

In other words, I have better things to do than learn code (and, I would guess, so do many other people), especially when learning code serves so little real purpose.

By the way, I say learning code "serves so little real purpose" because I do not need to learn it to use it. I can use my computer to send/receive code (faster than most could send by hand). And yes, I can do so during disasters (if I have the power to run my radio, I have the power to run my laptop).

So, learning code is not necessary for anything but passing the license test. Therefore, I have no more desire to learn code than I do to learn the digital data my computer sends through the modem while accessing the internet.

REPLY...

First of all John, you do not have the authority to speak for this newsgroup. I am a member of this newsgroup and you do not speak for me. So, in the future, please use "I" instead of "we" in your comments.

Second, since 99.9 percent of the radio operators in this newsgroup celebrate Christmas, this topic is relevant to them. Most ham radio operators don't live in a vacuum. Events, like holidays, affect ham operators too.

And finally, if you don't want to read this topic, don't click on the messages. And if you don't want to see the number of messages in this thread grow, don't post to this message thread.

4935. Virtual QSL Bureau- Any Interest?

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-11 00:00:00 UTC
From: John Fleming <xflemingjx@xpop.interaccess.com>
Message-ID: <01bd062f$52fd3f40$ba8658c7@flemingj.interaccess.com>
Source record: 184664

I am interested in soliciting opinion on the idea of a web-based QSL Bureau. Then general concept is:

- You log in, add your call to the database (also fill in address fields, other info rather than tie up searching engines for addresses that may not be valid). Add a password.

- You enter your sending QSL Info, same as on a QSL card, maybe a line for comments, etc.

- You list all QSL's sent to you via this service (you could restrict by date, etc.)

- System would print a "virtual" QSL card in your browser.

- You could print cards, or keep list of who you've worked, etc.

- You could add (for a nominal additional charge), a small picture or graphic that would be stored with your login info, and perhaps different formats of QSL cards for viewing could be created.

Of course, I would have to charge something if I did this, I don't have access to free internet provider. I was thinking maybe $10 a year or something, but for those who do a lot of DX work or are looking for WAS, etc, it may be a lot cheaper, faster, and more reliable than QSL cards, filling them out by hand, stamps and green cards, snail mail unreliablity, and potential loss of cards etc.

Regarding security, there would need to be some thought given to how to ensure that ARO is the real deal. But this is the case now; I have no way of knowing without verification if a QSL card submitted to me for an award is fabricated or not;

What does everyone think?

John Fleming AA9SU

Wow! You really put me down. You proved the existence of a WHOLE blue collar millionaire. YOU ONLY HAVE TO DO THAT A FEW HUNDRED THOUSAND MORE TIMES TO OUTWEIGH THE NUMBER OF PROVEN WHITE COLLAR CRIMINALS IN THE MEDIA EVERY DAY!

Clearly you can neither read nor go much past what the 700 Club and your goose-stepping friends tell you to think. I could never reason with you however hard I tried. You don't think I'm wrong because I am. You think I'm wrong because you're threatened by anything and anyone that isn't JUST LIKE YOU.

You're nothing but a feckless Nazi with no courage. I'm hiding behind an alias? I'm on the Internet you dullard! I'm no harder to find than you are! That is if you can resolve your rectal cranial insertion long enough to have a little chat with a search engine.

You know...none of this thread would've happened if you hadn't had to just LEAP UP on your soapbox and inform people of your obviously superior knowledge that pirate radio is illegal, which it STILL ISN'T. It's still a violation of Federal Regulations which, in itself, is STILL NOT A CRIME unless such violations are willful and continued!

By the way, you know how the ARRL Handbook and other sources say to keep one hand in your pocket when you're working on a rig? That rule doesn't apply to you. Go right ahead and stick both of those self-satisfiers right into that rig. Electricity can't hurt you any more than your own stupidity, I guarantee it. Shock therapy might help you I suppose.

This sounds like the radio has the AGC or QSK adjustments set too slow.
This is exactly what my Ten Tec does when I select the slow AGC or QSK
settings. If you cannot find an adjustment you will need to contact Rat
Shack and have them adjust it for you.

Mine does this too, and in mine the problem is the PTT switch in
the microphone. Sometimes it hangs up and doesn't release unless
I pump the switch a time or two. It does this with the stock RS
microphone, but not with another microphone I've tried with it.

Get a new mike, or debug the PTT switch on yours, is my guess.
But it might be an entirely different problem on yours. GL.

Guess we won't be seeing you on HF anytime soon ....
What are you going to do if (when) your laptop crashes?
Smoke signals? CW is not about what computers
can do.
Maybe you're better off playing with
your computer instead of radio...Take a listen on the CW
bands, alot of hams are having a great time using them
instead of crabbing about them. Join the fun.

WireHead Prime wrote:

> Wow! You really put me down.

I have you ever listened to yourself and tried to decide what age you are? You sound 13-ish/14-ish. We could care less that you are breaking the law as long as we don't pick up your reception. But if we ever do, you will have infringed on our rights, and at that moment you will reported and your expensive equipment, most likely confiscated. There will be no warning . . .

I would encourage you not to transmit, as is typical with extremist liberals that claim to have all the "fun" (especially those of a teenage vintage), we the middle class consisting of BOTH minorities and whites (wanted to make sure that fact was clear before you jump on top of your racial soap box again), have to pay the bill if the FCC has to send agents out to pay you a visit, and even more if you are sent to prison. Which again, is another infringement upon our rights. So before you go claiming your rights, you had better think about whose and what rights you are taking away in the process. Or are you so self righteous that you can decide what rights of ours you may infringe upon to satisfy your own desire to have "fun"? Remember, we (who are official amateurs) earned the right to transmit, you didn't . . .

Sincerely,

David Pearce

Does anyone know if there is any shareware or freeware programs around
that will allow a person to run cw and/or rtty directly from a com
port or with a very simple to build interface ? I know there are
several for SSTV and just wondering if there are any available for cw
and/or rtty. Don't really want to go to all the trouble of buying an
all mode tnc and all that. Thanks in advance.

4947. Upgrades, Morse Academy

Newsgroup: rec.radio.amateur.misc
Date: 1997-12-12 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <3491C95E.77AF20AE@aloha.net>
Source record: 184477

Aloha,

Nice to see several hundred US hams upgrading thier licesenses
each of the last several months. Obvioulsy many are still
studying CW and passing the test levels.

See the stats below of many US amateurs passing the 5, 13 and
20 wpm tests each month, and upgrading license
classes. Recent months numbers are:

Amateur Radio Station upgrades by "to-class" by month:

Month	to Tech	to Tech+	to General	to Advanced	to Extra
Nov-97	0	221	247	177	106
Oct-97	0	269	308	193	183
Sep-97	0	245	237	185	142
Aug-97	1	247	252	236	143
Jul-97	1	283	301	211	150
Jun-97	0	402	336	235	200

As you can see, between 200 and 300 folks, per month
are upgrading to General, and 100 to 200 each month
go on up to Extra. At the other end, over 200 a month
upgrade to Tech+ via the 5 wpm test. That's quite a
number of potential new/ or newly excited CW/SSB/digital
operators appearing on the HF bands each month.

Pretty health statistics for US Amateur Radio growth, in my opinion.

Should you be interested in upgrading your CW skills,
the most recent version of Morse Academy, 5.2r (12/1/97) has
been uploaded by the author to his web site. You may
download this latest version of this great CW training
program. Note this really emphasizes keyboard copy and,
with time, copying behind. Joe Sperone, AH0A, the developer
of Morse Academy is now a resident here on Kauai!!
He also has the above and many more statistics from
the FCC's license data base posted at his site.

Go to it now:

http://www.speroni.com/AH0A.html

Enjoy and Happy Holidays,

>Do you consider it NORMAL to offer 2 dozen models of cheap 10 meter
>mobile radios, many equipped with 2-digit "channel displays" and ECHO
>MICS??? This isn't normal amateur fare at all.

Last time I checked, we were still under a free-market economy in this country. If that's what SELLS and thus makes money for the business, that is what will be produced and offered for market.

You HAMBOS really should stop bitching about the proliferation of 2510s, 2950s, Galaxys, Emperors, etc. Makes for a nice supply of inexpensive 10-meter radios, doesn't it? Or would you rather pay several hundred dollars a pop, as would be the case if these radios were being produced in limited numbers and sold only to the relatively small number of amateurs vs CB and freebanders.

3 to 4 days is not ok when you hardly used the radio.
7 days without using the radio and finding that your fully charged battery has gone dead is also not ok.
Granted if you use unit a lot the battery is going to drain.My problem was i had to keep track of every minute to figure out if it was normal use or not causing my battery to go dead.In my case there was a problem.
Plus you don't want to wear out your batteries.They will go bad soon enough with normal use .

I could use a bit of assistance from Godzone.

I want to sit the exams in ChCh next time around, February I think. I've returned to the US for the holidays, having forgotten to post my application papers.

If someone could send me a copy of the application & filing address, it would save me having to wait 'till next September. I would certainly appreciate the help. I can send an SAE or whatever is required.

Thanks!

Dwight Stewart (stewart@sccoast.net) wrote:
:
: Christmas is an official United States holiday. That means that it is
: a holiday for ALL citizens of the United States. Therefore, it is
: perfectly acceptable to send holiday greetings to ALL.

Wrong. Christmas is a Federal holiday that is observed by all state governments and many private businesses. It is NOT a holiday for ALL US citizens. Many have to work on December 25th.

Sending holiday greetings is non-sectarian. Sending Christmas greetings to those who do not believe in Christ, and there are many, could insult them.

: How you celebrate Christmas, or don't, is a personal matter. It is
: just sad that you choose to celebrate it in such a negative way (by
: attacking others).

I would prefer to celibrate the holiday without having the merchants starting to pander their wares even before Thanksgiving.

That is a common cry from people who are engaged in a practice that disadvantages others but not themselves. I don't know about you Chad, but I'm doing my bit to advance the hobby while continuing to oppose this stupid historic rule that has become a doctrine of religious worship for many.

DIVISIONAL NEWS

NEW MEMBERS.

A warm welcome is extended to the following new members approved at the Council Meeting on 12 December 1997 We hope you will have a long and happy association with the Institute.

Full Members:
VK2IBT Kennith STANDEN of Cessnock
VK2ZE Lawrence DAVISON of Cabarita Beach
VK2MT Robert McKNIGHT of Fairy Meadow
VK2JW Jim WALKER of Nth Parramatta
VK2APA Andrew PUNCH of Hamilton

Associate Members:
Robert PRICE of Potts Point
John WRIGHT of Caringbah

Applications for membership approved since the end of January 1997 now stands at 129.

--Eric Fossey VK2EFY, Membership Secretary.

DIVISIONAL OFFICE CHRISTMAS BREAK

The VK2 Divisional Office will close for the holidays at 14.00 hours on Monday 22nd December and will reopen at 11.00 hours on Monday 12th January.

The VK2 Division Council wishes all our listeners a safe and happy Christmas and a prosperous New Year - and remember - Don't drink and drive - you might spill some on to your radio!

-- Eric Fossey VK2EFY - Division Secretary

WIA AFFILIATED CLUBS NET

The last Affiliated Clubs net for this year will be on next Sunday 21 December at 0900 local time on 3.595 MHz

The nets will recommence on 18 January 1998.

-- Ken Westerman VK2AGW Dunedoo

ATTENTION BROADCAST TEAM

The broadcast roster for the period January to March 1998 will be drawn up soon, so please notify the Divisional office of any dates that you are likely to be unavailable.

'AX' FOR AUSTRALIA DAY

In celebration of Australia Day, all Australian amateurs can substitute the 'AX' prefix for VK during the 48 hours (local time in each State) of the
Australia Day weekend of 24-25 January 1998.

Use of the AX prefix is optional. The decision is up to each amateur. This concession for the use of the special event AX prefix was first granted in 1997, following a successful submission to the then regulators in late 1996, the Spectrum management Agency, now part of the Australian Communications Authority.

--Federal Media Liaison Officer Roger Harrison VK2ZRH

WICEN NEWS

As mentioned last week, WICEN was indeed involved in the bushfire emergency, now thankfully over. WICEN was activated to assist the Police with their Disaster Victim Registration (DVR) procedures, in both the registration and public enquiry aspects, as with the Thredbo disaster. All told, there were fifteen WICEN people involved, including eight from the Central Coast region. In the meantime, please keep your batteries charged and equipment in full working order, ready for that sudden activation.

A reminder for events next year include the Bushwalkers Rogain, run by Alan VK2YYJ, on the weekend of 27-28th June at a location to be advised just two weeks previous, and the Hawkesbury Classic Paddle, on the weekend of 31st October and 1st November.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further

information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@marconi.mpce.mq.edu.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

MAGAZINE ROUNDUP

Here again is another summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the December issues of the various magazines.

"Electronics Australia" assembles an audio masker for tinnitus sufferers; a wide-band distribution amplifier, good to 200MHz and suitable for composite video and data, is constructed; Santa Claus builds some Christmas lights; the line carrier link controller is completed; and the passing of Arthur Cushen is noted.

"Silicon Chip" continues the story of electric lighting (did you know that a 100W lamp produces just 5W of light?); an anti-revenue-raising alarm is assembled; a two-axis robot with gripper is revealed; a buffered stepper motor driver is built; pulse position modulation in RC models is promulgated; and a power supply for stepper motor controllers is provided.

"Amateur Radio" saves face on T-connectors; some FM-only amplifiers are biased towards SSB operation; an 80m ARDF receiver is assembled; antennas for the space-challenged are examined; and those into linking repeaters will find a UHF Yagi of use. Listeners with Web access can access the contents of "AR" from the "unofficial" Federal page; the full path, courtesy of the VK2 Division, is: "http://marconi.mpce.mq.edu.au/wia/federal/armag.html"; we don't know about other magazines.

"Radio and Communications" bemoans the decline of Amateur radio; the pre-cursor to radar, sound detection, is discussed; hidden antennas are uncovered; spectrum piracy is published; and the CW mass debate is aired again.

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2ZTB

DX REPORT

GUINEA - Baldur, DJ6SI, and Franz, DJ9ZB, will be active as 3XA8DX until December 15. They will be active using CW, SSB and RTTY on all bands, including the newer bands.

DEMOCRATIC REPUBLIC OF CONGO - Karl, K4YT, will be in Kinshasa until December 13. He plans to be active as 9Q5YT using 9Q5PA's station.

GAMBIA - Lee, G0ULN, plans to be in Gambia from December 19 to January 9. He may be active as C56/G0ULN but hopes to sign C56LE. Look for him on either 20 or 15 meters daily.

OMAN - The Royal Omani ARS celebrates its 25th Anniversary with the call A43XXV from December 17 to 21.

ANGOLA - D2AI is on 20 meters using RTTY around 1720z to 1930z. Look for D3SAA to be active as well although his length of stay is unknown.

AMSTERDAM AND ST. PAUL ISLANDS - Eric, FT5ZG, has been on 20 meters around 14278 kHz between 1500z and 1630z.

JAN MAYEN - Terje, JX3EX, is active until next March or April 1998. He will be active on 80 to 10 meters.

AMERICAN SAMOA - KS6DV has a new call and is active as AH8LG.

SOUTH SHETLAND ISLANDS - A Bulgarian club station is active as LZ0L.

CHAD - Michel, TT8KM, will soon be active as TT6E.

MALI - Mako, JA1OEM, will be active as TZ6HP using CW and SSB from December 14 to 21.

VANUATU - Holger, DL7IO, is active as YJ0AIO. Look for activity on 40 meters. Brigit, DL7IQ, is active as YJ0AIQ.

SYRIA - Omar, YK1AO, is using special call sign 6C500. He has been showing up on 40 meters CW around 1420z working US West Coast stations.

--ARRL DX Bulletin 52, dated 11th December, 1997

Mirek VK9XU, who also holds the callsigns VK2DXI and VK3DXI, will be activating his new VK9 call this month, from Christmas Island. He will arrive on the 21st December and will be active there until he leaves on th 26th. He says he "will try to balance family holidays and radio activity.....". We have no time or frequency details at present.

SPACE NEWS

INTERNATIONAL SPACE STATION CREW TO INCLUDE HAMS

Hams will be among the first crew members to live and work aboard the International Space Station. In addition, several of the crew members named recently by the US and Russia are studying for their licenses. The R0MIR Mir club station call may also be available to the Russian

crew members on the ISS.

The first crew will consist of US astronaut William M. Shepherd, as the expedition commander. Shepherd is studying for his ticket. He'll be accompanied by Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR. All three have previous space flight experience. The crew is training for an early 1999 launch on a Soyuz vehicle for a planned five-month mission on the ISS. Initially, crews will inhabit the service module, which will include a ham radio antenna. Ham gear will be delivered aboard STS-96 late next year.

The second crew, headed by Russian cosmonaut Yuri Usachev, R3MIR, will include US astronauts Susan Helms, KC7NHZ, and James S. Voss, who's indicated an interest in getting his ham ticket. All three have spaceflight experience.

No licensed hams are among the third crew, which will be headed by astronaut Kenneth Bowersox and will include Russian crewmates Vladimir Dezhurov and Mikahil Turin. Bowersox also has said he'd like to get his ham license.

Russian cosmonaut Yuri Onufrienko will head the fourth crew. US astronauts Carl Walz, KC5TIE, and Daniel Bursch will accompany him. NASA has said it won't have the International Space Station assembled fully until the end of 2003--some 18 months behind the June 2002 date announced earlier this year. Microsat/repeater payloads are supposed to arrive in early 2002, expanding ham radio capability aboard the ISS. NASA says the US habitation module--the astronaut's living quarters--should be in place by the end of 2003. Fifteen countries are cooperating in building the International Space Station.

--ARRL Letter, Vol 16, number 48, dated 5th December, 1997

CLUB NEWS

THE COFFS HARBOUR AND DISTRICT AMATEUR RADIO CLUB

...will hold its Annual Field Day at the club rooms , Hogbin Drive (Toormina end of the Link Road , next to the Thunderdome) Coffs Harbour , on Sunday 11th January . Bring and buy tables are available for your valuable second hand equipment , BBQ , cold drinks , tea and coffee making also available. Displays , demo`s and all sorts of goodies available to the amateur Radio enthusiast . Hope to see you there . Robert Hancock VK2MAN @ VK2PYU, Secretary C.H.A.D.A.R.C.

CW OPERATORS' QRP CLUB

From time to time we bring you news of the CW Operators' QRP Club. This Club, based in Adelaide, fosters interest in the CW mode at powers up to 5 watts and in home-brewing.

Listeners are reminded that the on-air activities of the QRP Club are via Nets on Tuesday nights in CW on 3532 kHz at 0930 UTC and on Friday nights in SSB on 3620 kHz, also at 0930 UTC. All amateurs licensed to

use the HF spectrum are invited to join in these Nets.

Also the Club runs CW Scrambles of one hour's duration. These are held regularly on the third Thursday of each month on 80 metres (frequency 3530 +/- 5 kHz) at 0930 UTC and again we invite all CW operators, irrespective of your speed abilities, to join in.
In addition to these regular monthly events, there will be special Scrambles on Sunday afternoons at 0500 UTC, in the hope that operators will take advantage of improving propagation conditions to test their own skills and equipment. All we ask is that you will join in and when the Scramble is over that you send a log of you efforts to Ian VK3DID, who is QTHR.

For the 1998 Summer period these special Scrambles will be:

15th February 0500 UTC 10 metres 28.155-28.165 MHz 1 hour
15th March 0500 UTC 15 metres 21.125-21.135 MHz 1 hour

Please note these in next year's diary NOW and plan to join in.

-- 73 from the CW Operators' QRP Club via Ian VK3DID

FISHER'S GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown.

Also every third tuesday of the Month from 7:30 pm, at the Campbelltown High School, is the general Meeting night with lectures on popular subjects. Visitors are always welcome.

Classes are now closed for the year and will resume on the 4th of February 1998.

Due to the Christmas BBQ being held yesterday there will be no general meeting on tuesday 16 December.

The Committee would like to extend the Seasons greetings to all our members and to the Amateurs listening to this broadcast.

-- Publicity Officer, Chris VK2ZCJ

ILLAWARRA AMATEUR RADIO SOCIETY

The final meeting of the I.A.R.S. was held December 9th. Those that attended the meeting will remember the smorgasbord of gastronomic delights provided by our very own gourmet caterer vic. from the committee vic a very great thank you. W hope you will continue for sometime to come. We are all looking forward to your next effort.
The club is now in recess until the second tuesday in Feburary 1998.
The committee will still be working hard at future projects. In the pipeline for completion in the next few months. Like the10 Metre repeater on air ,new voice and packet repeaters ,10 Metre gateway . The I.A.R.S getting the jobs done , not just talking about them.

-- Brian vk2ubf publicity officer i.a.r.s.

HORNSBY & DISTRICT ARC

The next meeting, on Tuesday the 13th January 1998, this will be an informal meeting, the first formal meeting will take place on Tuesday the 24th February 1998, in the usual venue.

The open Night to be held on the 27th. January 1998 the fourth Tesday of January 1998, this is a coming event not to be missed, so mark this date in your diary.

If you require more information on the Open night ring John VK2WRT on 98072490 once more 9807 2490.

The Club Monday night net will carry on over the Christmas break, every Monday night, under the Club call sign VK2MA, through the Club repeaters VK2RNS and VK2RAT. The frequencies are 147.250 with a positiive offset and 439.975 with a negative offset. Listeners tune your receivers to 147.250 , or 439.975. Your welcome to join the net, or come along to one of our meetings, in 1998 you will be made most welcome.

If you would like to know more about the Club, or its activities write to HADARC., Post Office Box 362., Hornsby 2077., or phone John VK2WRT on 9807 490. once more 9807 2490.

Do not forget Tuesday the 27-1-1998 for the Hornsby and District Amateur Radio Club's Open Night.

-- John W. Turner VK2WRT Publicity Officer

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD ON DECEMBER 14th - THE LAST ONE FOR THE YEAR - TODAY !!

TECHNICAL WILL BE ON THE MINOR 444.250 INPUT PROBLEM OTHER SUBJECTS BEING FIRMED UP + NEWSLETTER HOPEFULLY.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

-- A.A.T.C. Inc. Publicity Officer Bob Barnes

WAVERLEY AMATEUR RADIO SOCIETY

Our regular meeting is, as usual, on the third Wednesday of every month so come along on December 17th at 7:00 pm for a 7:30 start. Our clubhouse is in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club.

Don't forget that our Christmas dinner is being held on Saturday, December 20th, at the Rose Bay RSL Club. Cost is expected to be about $30 per head. If you can come, please advise Simon, VK2EII, on 9328-7141 or Raffy, VK2RF, on 9130-5128 if you have not already done so.

The first Saturday afternoon of each month is project day, so drop in on January 3rd from 1:30 onwards and get involved in some practical work or just come along for a ragchew.

Our Internet home page is being updated so give it a look. You can find us via links from the WIA page or try your search engine using the club name.

--Simon Buxton, VK2EII, Club President

BROADCAST ROSTER

Next Sunday, 21st December, 1997

Morning:
Announcer: Frank VK2XVJ
Engineer: John VK2WRT

Evening:
Announcer: Alan VK2XAT
Engineer: Bernard VK2IDS

END OF THE BROADCAST

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.
